Well, I gotta' add that if it is broken, it has been broken since the mid 60s.
All of my FCC-given tests were 100% multiple choice.

And their meeting additional requirements is bad how?

Oh, and the "another few questions" was an additional 30 questions, from a
question pool of about 330.

>when incentive licensing was put into effect was a mistake, I think that the
>premise of incentive licensing is appropriate.

Ed:

As long as the "incentive" isn't attached to making a dedicated effort
to learn and master a practical communications skill, eh?

>The biggest problem I think we face, Larry, is one of spectrum. That will
>be solved as much by useage of the bands as it will anything else. Let me
>turn the question around and ask you how having a multi-WPM test series will
>solve that problem?

Apparently, it could do a lot more than merely giving away HF privileges. So far, Restructuring has been a colossal flop. Sure, there was a lot of upgrading activity, with people taking advantage of grandfathering. But the total numbers of new hams has, to date, been shockingly low. Therefore, one could draw the conclusion that easier licensing requirements aren't the answer to our situation. I think the answer is that ham radio in the USA is about as big as it's ever going to get, without a national, major media advertising campaign to get the word out about what we do. Again, I say -- word of mouth, hams "talking up" ham radio in their local area, IS NOT ENOUGH -- and never will be. For the most part, all hams do is talk to other hams -- "preaching to the choir" as it were.

>Another problem is that we are not seen as being relevant by many in
>industry and at the FCC. How will having a multi-WPM test series solve that
>problem? IMHO, this is the most important reason to replace the Morse code
>tests with tests relating to newer technology.

Uh, don't look now, Ed, but Morse code testing, at as many levels as you like, and "tests relating to newer technology" are not mutually exclusive! Why does one have to be eliminated in order to implement the other? I want a full explanation for that, Ed. Answer that question. Why does testing for knowledge of a practical manual communications skill prohibit the updating of written tests to reflect technology advances -- or vice versa?

>When the no-code VHF license was introduced, there was a sudden influx of
>newcomers for which there simply was not sufficient Elmering. How will
>having a multi-speed code test series solve that problem.

I'll answer your question that answered my question with another question: Why is "Elmering" so essential? I became an Extra-class licensee under the "old" system with virtually no one-on-one "Elmering" whatsoever. I knew how to open a book and read it, and that's what I did. I've offered my services as an "Elmer" many times in the past, but one requirement I made was that the books must first be opened up, and read. Sorry, no sale. What the "elmerees" wanted was to be shown the right button to push to make the radio work. I said, "OK, open up your instruction manual -- it'll tell you in there!" "Waaaaahhh!! Don't wanna read and learn anything --- wanna talk on radio!! WaaaaaHHHH!!!"

>I see the petty bickering that is taking place here and elsewhere and the
>sour grapes and/or gloating as being harmful to the amateur radio service.
>How wil having a multi-speed code test series solve that problem.

What are the sour grapes and gloating about? Mainly, jealousy over certain accomplishments certain hams have made, and the fact that making the same accomplishment would require the person with the "sour grapes" to get off their collective duffs and do the work necessary to make that achievement for themselves! I'm sure I'm considered to be "gloating" merely for having a 1x2 callsign -- I've already been told as much by certain local hams. I'm sorry I'm not "politically correct" in the eyes of the slouchers, Ed. I'm sure you'll do your part to make up for it.

>What problems do you think are facing the Amateur Radio Service and how do
>you think having a multi-speed code-test series will solve them?

I think the problem we have in Amateur Radio is that we've lost track of traditional values, as we have in virtually every other aspect of our society. I don't think multi-speed code test series will solve that, but the fact that the code tests are a main part of the "problem" for the slouchers places them at the locus of concern. If getting an HF license required the learning of a foreign language, and testing for fluency in same, then THAT would be the issue. The whole thing revolves around the laziness of people who want privileges without making the effort to learn practical skills in order to earn them. Solve that, and this newsgroup will come to an end.

>ARRL policy makes me want to vomit.

Watch out, Vince! Now Ed's gonna ask you several questions, each
ending with: How is a multi-level code test going to help?

Naturally, you're correct. Ham radio is heading down the drain,
particularly with regard to it's attractiveness to young people. The
irony is, young people used to be attracted to ham radio by the
very thing that the middle-aged white men don't want anything
to do with -- the Morse code! Kids love learning the code, they
make a competitive challenge out of it, and, if given a chance to
use it on-the-air, usually become experts at it in very short order.
The requirement to learn the code doesn't keep young people
away from ham radio -- the overbearing, overwhelming negative
influence of middle-aged white men does! They get on the air,
and all they get to discuss -- on voice or CW -- is the health and
welfare of the individual at the other end of the QSO. There is
little original discussion of events, new ideas, science, music,
the arts -- the talk is usually all about the person doing the
talking, as if he (usually male) were the center of the universe.
When young people get together to chat, they rarely talk about
themselves. That's why the typical CW QSO, consisting of
call sign, name, QTH in Florida, age, how many years retired,
local WX report, and "Got to QRT to get to the Senior Center
for the free lunch" just don't cut it with young people who are
curious about amateur radio. The ARRL's dumbing-down
policies are pandering to more of this. Young people don't need
reduced licensing requirements -- just a less "lame" ARS!

No question about that. Since the QPC is into testing things like modes not used by hams they might as well also toss in a test for having read the DeSoto chronicles for a reality check on how scary close it got and what really matters.

I absolutely agree with that. Sure, we're allowed to operate from 7.0 to 7.3. But on a shared basis with a large number of the biggest BC boomers in the biz.

Complete with both sidebands and mongo carriers, the ultimate spectrum hogs. And we're getting spanked for not using state-of-the-art modes to conserve spectrum space? Humbug. Tell it to Putin.
>
On any given nite I doubt we have a really usable 75 Khz to ourselves. I'll take a clean 200 Khz any day.

The California power crisis is not due to what we have been led to believe. Instead, it is the fault of the internet.

You who are reading this helped cause the problem, as CNN has documented at http://www.cnn.com/2001/TECH/computing/01/17/internet.energy.idg

Shame on all of you!

Oh Absolutely! As a 13 year articipant in the ARS, I not only have tired of hearing the OTs bitching, but I've begun countering they're insane accusations. And as a 13 participant, I am a rank beginner in Ham Years.

That should put some perspective on the situation.

I thought the ARRL handled the advisory role in 1934?

I'll never forget my worst incident with a "radio cop." I had encouraged my wife to get her license. Since she knew absolutely nothing about radio before studying for that exam, and had studied for three weeks to pass the exam, that license was hard earned and she was darn proud of it.

Anyway, part way through our second conversation on the radio, the "radio cop" made his grand entrance. The previous night, my wife had problems getting her radio set up to work correctly (it was my old radio - purchased because it was loaded with features, not because it was necessarily easy to use). So our conversation was somewhat limited that night.

However, the next night, I had set the radio up to default to an easier mode (preset memory channels), so that we could concentrait more on conversation (figuring she would eventually learn the radio eventually on her own).

Anyway, that night, we tried several of the memory channels (each set to a different repeater), trying to figure out which repeater would be best for her to talk on during her trip to and from work each day (which repeater had coverage of the whole trip distance).

Finally, we settled on two memory channels - the main one and a backup (which would be set to memory channels one and two on the radio). As we were discussing this, a male voice boomed in with the words, "frequencies, not channels." Believing that someone else might want to use the repeater, I told my wife to hold on a second and invited the person to go ahead.

At that point, the "radio cop" started lecturing my wife about how we use frequencies instead of channels in ham radio and further suggested that she should also stop using CB slang (she had said "roger" earlier).

When he was finished, I explained that we were referring to the memory channels on her radio, that she was new to ham radio, that my goal was just to get her talking on the radio at this point, and that little issues like that could be corrected later.

In response, he pointed out that radio memories were nothing more than memorized frequencies, that I should refer to the frequencies memorized instead of the memory channels, that I was failing my wife by not teaching her properly from the beginning, and then turned back to lecture my wife some more, ending with a suggestion that she find someone better than me to teach her in the future if she wants to learn how to do things correctly.

After he was finished, I thanked him for his input and tried to contact my wife again. She simply said that she was almost home (she wasn't) and that she would talk to me when she got there.

It took me almost four days to get her to talk on the radio again, and then only on a frequency that I was able to assure her was not likely monitored by anyone else. And, dispite our almost nightly conversations, it was going to be another five months before she would be confident enough to talk to someone else. In fact, to this day (almost two years later), she has only talked to two people, besides myself, on the radio. And her enthusiasm about, and pride in, radio are long gone.

In the end, the "radio cop" did a good job of defending "proper" tradition on the radio. But in doing so, he ruined my wife's enjoyment of this hobby (and, for all practical purposes, ended her hobby before it even got started). And that is why I'll never forget that "radio cop."

>From: yodoc@aol.comnospam (Larry Roll K3LT)

>As long as the "incentive" isn't attached to making a dedicated effort to learn and master a practical communications skill, eh?

As long as the incentive is directed toward what I believe will help further the long-term goals of the Amateur Radio Service.

>So far, Restructuring has been a colossal flop. Sure, there was a lot of upgrading activity, with people taking advantage of grandfathering.

You believe that people learning new things and passing new tests is a "colossal flop?"

>But the total numbers of new hams has, to date, been shockingly low.

A slight increase, reversing a trend that had been a slight decline.

>Therefore, one could draw the conclusion that easier licensing requirements aren't the answer to our situation.

I absolutely agree; the problems facing the Amateur Radio Service will not be solved if only we could test hams in just the right way.

> I think the answer is that ham radio in the USA is about as big as it's ever going to get, without a national, major media advertising campaign to get the word out about what we do.

Although I disagreed with you that prime-time TV advertising was needed, I agree that Amateur Radio, and ARRL, need to do a better job promoting ham radio. However, I wonder what percentage of those that might be interested in ham radio, but have not yet taken any tests, are not aware of its existence? Probably few. I do imagine that a lot of those who are interested are already hams. We might gain a significant number if we got the word out better about restructuring.

>Again, I say -- word of mouth, hams "talking up" ham radio in their local area, IS NOT ENOUGH -- and never will be. For the most part, all hams do is talk to other hams -- "preaching to the choir" as it were.

I am much more likely to buy a product if I get good word of mouth about it than if I read an ad. Unfortunately, the word of mouth at this point may not be very good. Ever since I did it, our ranks have always had a high percentage of people whose first personal experience with radio was on 11 meters. The 11-meter folks of that day looked up to hams, and felt that if they became hams, they would be doing a better version of what they were doing at the time. How about today? I have read some of the CB newsgroups, and talked to a number of CBers. Do you not think they might resent the use of "CBer" as an insulting term within ham radio? Do you think they are not well aware that if they join our ranks, a few curmudgeons will go out of their way to tell them how dumbed-down they are because they took these new exams? Do you think our reputation for "gently reminding" them that they must choose exactly the right words when the join in amateur conversations would help bring in these newcomers.

I will believe your sincerity about wanting to bring in newcomers to ham radio with mass-media advertising when I see your personal conduct reflecting the same desire.

>Uh, don't look now, Ed, but Morse code testing, at as many levels
>as you like, and "tests relating to newer technology" are not mutually
>exclusive! Why does one have to be eliminated in order to implement
>the other? I want a full explanation for that, Ed.

Yes, you usually do want a full explanation, Larry. :-) You are correct, Morse code testing and relevant testing are not mutually exclusive, but I do not believe that Morse code testing adds to the perceived value of Amateur Radio outside of some amateur circles. I do not want to eliminate Morse code testing in the Amateur Radio Service, btw; I believe it should continue to be part of our testing process as long as it enjoys significant popularity on the air. I just believe that it should be tested as is the testing for other modes -- by including the questions about sent text as part of the overall exam.

>I'll answer your question that answered my question with another
>question: Why is "Elmering" so essential? I became an Extra-class
>licensee under the "old" system with virtually no one-on-one "Elmering"
>whatsoever.

Yes, but Larry, you are so far advanced over mere humans that you can do that. I did not. If it weren't for W1BNB, I don't think I would have been nearly as successul at setting up and using my station. I think, however, the real reason that I believe Elmering to be important is that we can see the evidence of lack of Elmering in the low activity rate and probable low renewal rate of the Technicians who entered ham radio right after the no-code Tech was put into place.

>I knew how to open a book and read it, and that's what
>I did.

If you agree that opening a book and read it is adequate to obtain the practical knowledge that is passed along by Elmering, perhaps you could consider advocating opening a book and reading it as a good way of obtaining the practical knowledge of Morse code use...

>WaaaaaHHHH!!!"

I do agree, Larry; you should probably not be an Elmer. No one likes to see a grown man carry on so.

>What are the sour grapes and gloating about? Mainly, jealousy over

>certain accomplishments certain hams ...

I have seen you offering what I believe to be sour grapes, Larry. Who are YOU jealous of?

>I'm sure I'm considered to be "gloating"

No, the gloating was by those who wanted to rub in the code-test changes to the pro-code test folks. I put you in the sour grapes category in that regard, Larry; sorry.

>I'm not "politically correct" in the eyes of the slouchers, Ed.

Is it now "politically correct" to call what my upbringing taught me was rudeness and insensitivity "politically correct?"

> I'm sure you'll do your part to make up for it.

Thank you, Larry, but it is not that simple.

>I think the problem we have in Amateur Radio is that we've lost track of
>traditional values, as we have in virtually every other aspect of our
>society.

Are the mean-spirited things I have seen you say about or to some newcomers and some of those who disagree with you part of those "traditional values?"

> I don't think multi-speed code test series will solve that, but the
>fact that the code tests are a main part of the "problem" for the slouchers
>places them at the locus of concern.

Some of those who believe that the code testing should be changed have passed the code tests already, Larry; are they "slouchers" or do you have another category into which you can neatly lump them all?

>The whole thing revolves around the laziness
>of people who want privileges without making the effort to learn practical
>skills in order to earn them.

The problem is not laziness at all, Larry; it is that some people are not willing to learn the one practical skill that will satisfy you. If hams WERE required to learn a foreign language to be licensed, let's say,oh, 26 words and 10 numbers, would you be satisfied?

>Watch out, Vince! Now Ed's gonna ask you several questions, each
>ending with: How is a multi-level code test going to help?

No, I just invite Vince to discuss what he disagrees with and why, rather than a sweeping generalization about the state of his appetite.

>Naturally, you're correct. Ham radio is heading down the drain,
>particularly with regard to it's attractiveness to young people.

Are you saying that young people were joining ham radio in droves up until April 15, 2000?

>The irony is, young people used to be attracted to ham radio by the
>very thing that the middle-aged white men don't want anything
>to do with -- the Morse code!

Morse code is still a very much alive and well part of ham radio, Larry.

> Kids love learning the code, they
 make a competitive challenge
> out of it, and, if given a chance to use it on-the-air, usually become
experts
> at it in very short order.

Then why do you feel they will love it even more if they are given tests in it?
 I remember lots of spelling tests from school, but not one single kickball test. Guess which activity I spent more time doing.

>The requirement to learn the code doesn't keep young people
>away from ham radio -- the overbearing, overwhelming negative
>influence of middle-aged white men does!

Do you feel that the things you have been saying on this forum are not overwhelming and negative?

> They get on the air, and all they get to discuss -- on voice or CW --

> is the health and welfare of the individual at the other end of the QSO.

And here we discuss whether Vince's stomach is feeling well. :-)

One would hope the FCC is operating on more than just feelings.

Only if they are at the FCC.

> You didn't write that there weren't enough to matter. You wrote that nobody who

It means exactly the same thing to a Texan. If there's not enough of them
to matter then they don't matter. Same thing.

> >Nope, the number of them is what matters.
>
```

> That's not what you wrote.

Yep, it is. Bone up on your Texan, Jim.

You've got your opinion and I've got mine. From my point of view, it appears
that the division is swinging toward equality with each passing day.

> Ah - OK. So it was OK with you to steal the TLA of the National Cancer
> Institute.

I didn't say it was OK but it certainly has a better ring to it than NCTI.

> Depends on who they are. Do you agree that allowing DSSS on the HF ham bands
> could seriously disrupt the use of other modes?

IMO, DSSS is not suited for the HF ham bands with the possible exception
of 10m. Aren't broadband transmissions limited to 6kHz on ham HF?

Never ran into the issue before quite frankly. I seriously doubt that the big guns lose many contacts because they snubbed dx qsls. In their defense they will ship a card if it comes direct but not if it's in the heaps of pro-forma cards which come via the bureau. There's a Polish station which qsls every contact on every band every contest, I must have 20 of his cards. That's ridiculous, I stopped shipping him cards years ago and he still answers my cq's.

I think they're headquartered in Ohio somewhere.

I lived on sliders (12 cents each in those days) all the way through college. We have 3 or 4 "slider stores" here in the Mpls/St.Paul area, and about once-a-month several hams in the area get together for "gut-bomb" luncheon on the tailgate in their parking lot.

There are two kinds of people in the world.... those who like sliders and admit to it, and those who do not admit to it.

The Roof of the Universe. And in the Last Days, when the Great Frisbee that shineth in the sky hath gone out, then shalt the Almighty Thrower ascend the Ladder of Life and collect the souls of those who have flown free, and take them The Eternal Park, where we shall sail upon the Spring Breezes for ever and ever, and be Fetched by the Holy Dog. Amen.

I get it now. You said, "Oh,I hear jamming on a weekend net every week.
But we just ignore the idiot and he takes his No Code arse somewhere
else to try to gain his 'revenge'." - and you have no idea who it was
so you labeled him/her a No Coder? Such a collectivist, Dick, tsk, tsk.

> drive the darn thing.

There's a strong implication that the examinee wants to drive a vehicle. Why is no operating exam required for a bicycle?

> When you qualify as a pilot you 1.)take a written test, and 2.)take a practical operational exam where you demonstrate that you actually can fly the darn thing.

There's a strong implication that the examinee wants to fly a plane. Why is there no operating exam for a hot air balloon?

> When you take a ham radio test you 1.)take a written test and 2.)take a practical operational exam where you demonstrate that you can actually copy code.

There is absolutely no implication that the examinee wants to use Morse code. The exam is forced upon him/her even though he/she may have no intention of using it.

> In neither case is one exam "emphasized" over the other. You have to make a passing grade on both. It's called MEETING THE REQUIREMENTS FOR THE LICENSE!

You have one pass/fail test dedicated to Morse code. You have another pass/fail test dedicated to everything else in Amateur Radio combined. Therefore, Morse code is considered as important as everything else in Amateur Radio combined. That certainly sounds like emphasis to me, Dick.

Get a grip, Brian. For reasons known only to you, you have decided
to treat me like Robeson treats Len Anderson, casting me in the role
of some sort of radio-ogre. It was amusing for awhile, now it's just
an annoyance sorta like when an excited but untrained puppy pees on
the floor when he sees his master first time in the morning.

You are confused and mistaken again, Dick. I have always said that
I believe CW has merit and can stand on its own without government
subsidy. You are the one who says that CW doesn't have enough merit
to stand on its own merits. It's the Morse code *TEST* that I believe
is without merit.

> So would you care to lay out just how it is that I'm "lying" about
> CW's capabilities?

"CW gets through when no other mode can." is one lie you told.
Another is, "CW is useless at 5wpm."

> If CW
> > cannot honestly stand on its own merits, then it deserves to be replaced
> > by modes with more merit. Obfuscation about CW's merits will just hasten
> > its demise.
>
> You are not only a fool, you are also a liar.

It is impossible to lie when one prefaces a statement with an "If".
It's known as a conditional statement. Better brush up on your English
and logic, Dick.

True or False: If CW cannot honestly stand on its own merits, then it
deserves to be replaced by modes with more merit. There's no way that
statement can be false.

True or False: Obfuscation about CW's merits will just hasten its demise.
That one seems prima facie true to me, Dick. When you say CW is as good
as sex, everyone knows you're lying.

> When all testing is gone it is only a matter of a little time.

It's rather obvious that I have more faith in CW than you do, Dick.
Why do you think CW has so little merit that it cannot survive without
government support? I thought you were against welfare.

> You talk like you and everyone else posting here in support of totally
> dropping it are its friends. What an idiot.

There you go again, Dick. Virtually no ham wants to drop CW. Many, many
hams want to drop the CW *test* requirement. When are you going to get
that fact through your thick skull? CW needs to stand on its own merits.
I believe that it can. You believe that it cannot. You are no friend of
the mode.

The brush was not intended to be broad at all, Ed. I didn't mean to
imply "all other PCTA folk". Just a handful of individuals. I probably
should have said, "and a few other PCTA folk". That was my meaning.

I was not arguing against it, Ed. I was just pointing out that someone
was asking that a negative be proven, which is generally impossible in
a context like that one. It more correctly should have been stated as a
positive premise to be proven.

Absolutely nothing as long as your generation keeps bullying them.
Newness is something fragile that needs to be nurtured, not jumped
on with golf shoes.

Why is everyone assuming that it was this "incident" that dissuaded the young fella from continuing with the hobby?

Isn't it his generation that has grown up with the reality that politically correct speech is more important than content or intent? Doesn't he have to live in a world where accidentally speaking non-politically correct words will bring down an immediate wrath.

Isn't it his generation that has grown up with the reality that wearing the "wrong" color/brand of cloths or tilting the brim of you baseball cap the "wrong" direction will get you shot to death by some gang-banger?

Hasn't every generation grown up knowing that using the right "lingo" around your piers determines whether your accepted or shunned?

I'm going to assume that the youngster is acutely aware of his environment and is more attuned to saying the "right" thing vs. the "wrong" thing than any previous generation. I would guess that he would appreciate being informed in a gentle way what lingo is "used" here.

The reality just may be that he finds CB more fun to play with than Ham radio. Only he knows the real reason. No one else really has a clue, so lets stop using it as irrefutable evidence of anything.

> "contact-confirmation postcards"?

Yeah, and when we talk about a construction article from their magazine on the air, we gotta change modes to CW to send the name of the magazine? Maybe we can't say "73" or "CQ" on phone anymore, cuz those also originated in Morse-only days? I just love it when these purists come down from Mount Newington with their engraved stone tablets!

What a delightfully convoluted fabric you have woven to justify the boorish behaviour of Radio Cops everywhere! Betcha I hear on 14.195 yelling "UP UP UP" too, don't I?

They use mail boxes to accidentally jam each other? You must have a
perty big antler to hear Iran on 40. I doubt I'm hearing 'em.

I recall seeing similar faux pas in the current question pool - where you have to speculate as to what the question might mean. One can usually figure it out from the answer and distractors. Thank goodness for those. :-)

So if you don't operate there then you don't care, right? So, if it was not a problem in the first, then it would not need fixing either. Time will tell.

As far as CB stations on the bottom end of 10m goes, the operators seem to be speaking English real good, no Spanish accent to be heard when I tuned in. They are easy to find, just tune around for the "CW pile up".

Because the people prefer to be controlled by emotions like fear,
rather than be bothered by politcs. Crime is "good" for fear.

The seafood at Red Lobster does not come from the sea. It is strip-mined from an ancient fossil-seabed somewhere in eastern Montana.

Because you don't have to do the homework anymore.  All you have to do
is take the test over and over until you get the answer right.

If it takes 5 times to learn something you really want to learn, how
many times does it take to learn something you don't feel like learning?

Sorry this is a trick question.

The biggest mistake we make is to believe that everyone would want
think and be like us (if only they knew).

Should you even be required to take a license test to be able to bitch
someone out without getting your face slapped?

I was just pointing out how the gaff could have been easily been
avoided. The next time that you wear a bathing suit to church, will
you get mad at those who laugh at you??

I said "every hobby". Let me rephrase my sentence for ham radio:

Ham radio has it's preferred repeater lingo. If you use the wrong
lingo you immediately identify yourself as an outsider (to repeater
operation)...

If I said "W7xxx monitoring" on CW in order to get a contact, I think
I might be thought of as an outsider...or worse...   :-)

I was getting practice on the air before my Novice came... :-)

>The "gaff" could have been avoided if everyone had decided that it wasn't a big
>enough deal to be labeled a "gaff" in the first place.

A gaff is simply a social error. Using the wrong language in a
particular social setting is a gaff. Once it is done a gaff has
occurred, no matter what anyone labels it...

>How was he to know that he might face criticism if he didn't choose
>the correct words when he introduced himself to people?

In society most people are too polite to tell someone about his gaff.

```
They just think of him poorly behind his back. At least hams are
honest and straightforward...  :-)

>Ya mean like cw exchanges are a languge?

I mean that when a cop hears "10-20" he doesn't think "I must decode
10-20....decoded....it means location". In his mind he knows directly
what "10-20" means and "10-20" has become a word in his vocabulary.
It's the same with hams and common Q signals. When I hear "QTH" there
is no mind decoding, I hear and think of it as a word. And yes the
```

language *quality* of CW makes me think of code groups as words in my
vocabulary, no separate mind decoding step needed...

There is no "official list". Some codes seem universal (like "10-4")
but many are not, and they vary in meaning from list to list. The
Phoenix Police Department has even changed the meaning of some of it's
10 codes over the years...

Brian <brianburke@my-deja.com> wrote:
>I thought the ARRL handled the advisory role in 1934?

Radio magazine, which was an established 17 year old publication in 1934, appears to have had an anti-ARRL editorial policy. ARRL had just removed voting privileges from non-hams and that was causing quite a stir. I think Radio was trying to capitalize from the controversy. From time to time (when things bog down here) I'll scan and post excerpts from a few of these articles...

When a state doesn't build any power generating plants during the
ten years the population is doubling, the result is 100% predictable.

It has been my experience that the biggest "radio Cops" turn out to be no-code techs that have had a licenses for a year or so. I had one start on me one morning when I used the term handle.

He proceeded to tell me how "handle" was a CB term and not used on the repeater. Being the shrinking violet I am, I went on to explain I used "handle" on 11 meters when it was a ham band along with a dissertation about correcting people who may be new and somewhat hesitant such as your wife.

> best for her to talk on during her trip to and from work each day (which
> repeater had coverage of the whole trip distance).

> Finally, we settled on two memory channels - the main one and a backup (which would be set to memory channels one and two on the radio). As we were discussing this, a male voice boomed in with the words, "frequencies, not channels." Believing that someone else might want to use the repeater, I told my wife to hold on a second and invited the person to go ahead.
>
> At that point, the "radio cop" started lecturing my wife about how we use frequencies instead of channels in ham radio and further suggested that she should also stop using CB slang (she had said "roger" earlier).
>
> When he was finished, I explained that we were referring to the memory channels on her radio, that she was new to ham radio, that my goal was just to get her talking on the radio at this point, and that little issues like that could be corrected later.
>
> In response, he pointed out that radio memories were nothing more than memorized frequencies, that I should refer to the frequencies memorized instead of the memory channels, that I was failing my wife by not teaching her properly from the beginning, and then turned back to lecture my wife some more, ending with a suggestion that she find someone better than me to teach her in the future if she wants to learn how to do things correctly.
>
> After he was finished, I thanked him for his input and tried to contact my wife again. She simply said that she was almost home (she wasn't) and that she would talk to me when she got there.
>
> It took me almost four days to get her to talk on the radio again, and then only on a frequency that I was able to assure her was not likely monitored by anyone else. And, dispite our almost nightly conversations, it was going to be another five months before she would be confident enough to talk to someone else. In fact, to this day (almost two years later), she has only talked to two people, besides myself, on the radio. And her enthusiasm about, and pride in, radio are long gone.
>
> In the end, the "radio cop" did a good job of defending "proper" tradition on the radio. But in doing so, he ruined my wife's enjoyment of this hobby (and, for all practical purposes, ended her hobby before it even got started). And that is why I'll never forget that "radio cop."

> What standards have been lowered? The existing "entry" level ticket
> material is so large and complex that it cannot be run away from.

The lowering of standards have been brought about by a combination of
the VEC program that brings in large groups of unknown people who
are "helped" into a license and the fully published question pool that
short circuits the learning process, and focuses on rote memorization.
That is, people can get a license so fast, you wind up with whole
graduating classes that have no connection to the accumulated
experience of amateur radio.

One way to get around this is to have an entry level ticket with
greatly reduced priveliges, that is time limited. Further testing that
reveals experience would be required to upgrade. It used to be that a
novice couldn't upgrade without either turning in a log of at least 100
contacts or 100 QSL cards. Does Japan still have a system that
requires SWL QSLs from Ham operators in order to upgrade from an SWL
ticket?

The point is; These people are chasing the legitamate operators off of
the air. What you have left over is people who are trying to get some
enjoyment around these people and these people who get their jollies
from this behavior. Yes there will be beligerant OTs left in this
mess. There will also be beligerant OTs BORN of this mess. These

people ARE PART OF THE PROBLEM and are easy to point to, but the way to deal with these people are to avoid giving away licenses in the first place.

I know I am guilty too. I assisted a novice once that turned out to be a jammer once he got a radio in his hands and even helped another jammer get his license. If I had only known, he would have gotten no help from anyone I knew. As it was we were able to prevent the further spread of this nonsense as they only could talk to each other and finally lost interest and lapsed without an upgrade. These days they might have a lot bigger circle of friends and a renewable 10 year license without FCC intervention.

There is an unavoidable 1st Amendment issue that says you can't enforce people to say what other people want to hear, any more than you can enforce people to listen to what they don't want to hear. The only enforcement that can be legitimately applied, is enforcement of the 1st Amendment by jailing and pulling the licences of willful interferers. You really don't want any more interference than that from the government because "behavior" is too subjective and nebulous.

Do you really want a "letter" because someone was offended? There's way too much of that nonsense going on in political arenas.

The problem with that is that the FCC isn't completely web savvy either, and again do you want them to be more of a presence in web communications? So far we have much more freedom to express ourselves here than with the "handbill" or letters to the editor or anything else under FCC jurisdiction. The MASS MEDIA only proves that the 1st amendment belongs to the highest bidder.

Being something of a nite owl at the time, I got used to White Castles in
St. Louis which is as far west as they went.  Last time I was down there,
out of nostalgia I stopped in on Hampton Av.  Somehow they are not the
same without the wino sleeping in the corner.

Some of us believe in finding peaceable solutions to this situation, but that doesn't mean we're timid, or wimpy, or "pc" freaks, or that peaceable responses come naturally to us without conscious effort. And if some other people like to growl, posture, and piss in all the corners, it doesn't necessarily prove they're tough-minded kings of the forest whose opinion is more valid because they say they can send it at 35WPM: On the Internet, no one can tell you're a chihuahua.

One time, at a hamfest in AZ, I said into my 2m simplex transceiver, "Hey
Harold, y'all got yore ears on?" One ham looked at me rather pathetically
and said, "We hams don't talk like that. How long have you been a ham?"
I replied, "45 years". :-)

Don't you believe it's the Morse code *REQUIREMENT* that is without

merit?
I can't recall ever having seen you claim the element 1A VE test itself
is without merit. The relative merit of the test would depend on it's
effectiveness in determining whether or not the test taker can copy some
percentage of a Morse code message at the specified speed. Wouldn't it?
;-)

Larry is the one who says the test is without merit. I can't believe
you agree with him on something related to amateur radio - Morse code in
particular hack, spit, barf! ;-)

> When you say CW is as good

It's the state beaurocracy gone berserk.

It's an experiment to see what happens when you require the sellers of
electricity to sell-off their means of producing electricity, remove the

limits of wholesale pricing, but keep the limits on consumer pricing. The power producers can limit supply so that the wholesale price will go as high as they want, and the guy selling it to the end user is stuck with the loss. It's as screwed up as anything could possibly be. Edison, the company that built practically everything we have out here, is getting totally screwed. Electricity has always been bargain priced out here. Our taxes will have to go up to pay for it now.

Tree Huggers:
Hug that tree today! You were so busy protesting new nasty power plants, that may cause acid rain and could hurt the trees, you may have to burn it tomorrow to keep warm.

While other factors enter the picture, I have to grin a bit when I see the NIMBY folks, that fought the building of new power plants, cut off from their internet protest sites because they have no electricity.

The problem will be solved when the big one hits, and Nevada ocean front property becomes available.

Despite what the feel-good politicians (in bed with corporate raiders) will
tell you, there are few things which are best left as regulated regional
monopolies.

Let me clarify; by "here" I mean here in the conversation about SS.

What are the odds of guessing correctly on a 35-question, 4-answer multiple choice test? If I did the math correctly, it is 1,180,000,000,000,000,000,000 to 1.

I still think it is easier to learn the material.

> If it takes 5 times to learn something you really want to learn, how
> many times does it take to learn something you don't feel like learning?

I don't think that people who do not feel like learning will bother taking the test at all. They wouldn't want to be hams.

> Sorry this is a trick question.

Did I pass? :-)

> Should you even be required to take a license test to be able to bitch
> someone out without getting your face slapped?

Why would I want to bitch someone out? I have done it a few times in my life, but it is not something I am particularly proud of.

I guess I didn't think about how my words could be misinterpreted on an
Amateur Radio forum.  Let me try again for you, Aaron.

The FCC does not allocate spectrum to the Amateur Radio Service only on the
basis of the fact that hams pass tests.

I do not believe that it easier to rote memorize over 1000 questions without
learnign than it is to learn the concepts that are behind the tests.

> That is, people can get a license so fast, you wind up with whole
> graduating classes that have no connection to the accumulated
> experience of amateur radio.

They can't get licences as fast as I did when I studied 4 pages of study
guide to get my Novice.

> It used to be that a novice couldn't upgrade without either turning in a
log of at least 100
> contacts or 100 QSL cards.

This requirement did not exist in 1963, when I was a Novice. In 1963, one
could skip the Novice exam altogether and take the General. When was this
rule in effect?

> The point is; These people are chasing the legitamate operators off of
> the air.

How? I have never been chased off the air, other than by the inevitable QRM
that occurs to my station running +20 dBm of power or so.

> but the way to deal with these people are to avoid giving away licenses in
the first

> place.

Yes, I suppose if there are no licenses, there is no problem with operators misusing the airways.

Have not many of those who have received NALs been licensed a long time?

> I know I am guilty too. I assisted a novice once that turned out to be
> a jammer once he got a radio in his hands and even helped another

> help from anyone I knew.

I agree; jammers are scum. Most of those who have been given NALs for jamming are not Novices, or even recent licencees.

> There is an unavoidable 1st Amendment issue that says you can't enforce

FCC enforcement is the correct solution.

> Do you really want a "letter" because someone was offended? There's
> way too much of that nonsense going on in political arenas.

I do not recall any of the NALs being issued because someone stated an opinion that someone else didn't like. Can you provide any examples?

I think that most of the screaming about the confederate flag has been coming from south of the Mason-Dixon line. Most Yankees I know don't give it any thought at all.

Some don't think that wearing a bathing suit to church is nearly as bad as
saying "first personal" instead of "name" on a repeater. :-) I know you

don't like me to ask questions, but I can't think of how to do so without a question mark, so I will just come out with it -- what do you think?

Whoever originated the phrase, "honesty is the best policy" clearly didn't envision this scenario. :-)

In some parts of society, most people are too polite to tell someone about their "gaff" at full quieting in front of a group of people the gaffer just met.

Others advocate that they do.

True story.

Just after the no-code Tech license was authorized, I heard a QSO in
progress on the 146.85 machine in St Louis. An OT with a brand new NCT
license/call was getting reamed by a 2x2 named Curtis. It appeared that
the Tech had identified himself sayng "Oh" where the "Zero" should have
been. The 2x2 was calling the new ham a stupid idiot.

The Tech explained that it was an "Oh" and not a zero because the instructor in his Tech class said in ham radio the sero is ALWAYS slashed. The sero on the license wasn't slashed.

Then a few other hams tried to intercede and change the subject, but NO. Curt just wouldn't let it go. It really got ugly and I was embarassed for ham radio and felt sorry that the new ham had to get that kind of greeting.

Now Dick will come on here and say that the new Tech should already know everything there is to know about ham radio and "should have known" that it couldn't have been an "Oh." After all, he passed a test.

Why guarantee a profit? That is ultimately what regulation does and has to do. I believe you are on Northern States Power which as utilities go is a good one in a lot of respects. But if you called there I will bet that now and certainly the next cold snap you will be buying power from the Nebraska Public Power System via MidContinent Area Power Planners lines, a loop from NSP to Chicago to St Louis to KC to Omaha and back. You will pump it back next summer.
The history of consumer-owned power in Nebraska is a great one with rates about 20 percent lower than the national average. Right at the moment I am probably being supplied by the nuke at Fort Calhoun on time, on price, and reliable as sin.

Public power is one of the legacies of Senator George Norris. Norris Dam on the TVA is named for him, GW Bush is being inaugurated 20 Jan rather than March 4 because of him, and Nebraska has a one-house legislature because of him although the local 'conservatives' cum idiots limited the sessions making filibusters possible (Norris was in on a famous filibuster so one of the things he pushed was unlimited sessions). My water and gas come from a more local Metropolitan Utilities District that also does its job extremely well.

The trick -- and it is hard to do -- is to limit the scope of the utility's responsibilities and not to politicize everything. The TVA nearly foundered until David Lilianthal(?) firmly put them in the power business.

I am as much a fan of free enterprise as anyone but I just do not see where electric power should be free or particularly enterprising.

I agree that it may be better to allow a new ham to listen rather than jumping him on the air. He'll soon realize that we don't generally use certain terms. People generally try to fit into anything to which they are new and usually will come around to "doing as the Romans do" on their own.

Like you, I've had a couple of run-ins with "radio cops". I once used the local auto-patch, pounded it down, and made the usual announcement- "K4KWH clearing auto-patch after third party traffic with XXXX......." R-cop proceeded to lecture me that I was to do that BEFORE bringing down the patch. I didn't see the difference--still don't--just so I made the required statement. I was nice to the old codger, but I was seething. Some time went by--maybe several years--when one night I eased down to the local Dairy Queen for a huge cone of ice cream. The local club was having their usual Tuesday nite VHF net on the same repeater. All of a sudden, a pickup changed lanes and ran a Chrysler off the road onto the sidewalk. Poor guy (car) busted a tire, ruined a hubcap, bent a wheel, and missed a light pole by inches. Pickup kept going. I broke the net with my call, told the net control station I needed to call the police because of a hit and run, and he immediately yielded the repeater. I brought up the patch, started to dial 911 and somebody pounded it down right out from under me stating, "THAT IS NOT EMERGENCY TRAFFIC"! Guess who it was. The same old geezer that jumped me about the patch previously. It started something of an on-air debate/argument with this old fart trying to lecture ALL of us on what is an emergency or not. I didn't take kindly to this because the hit and run driver was long gone during this 3-4 minute debate. I finally spoke up: "JUST NEVER YOU MIND OLD MAN. THE HIT AND RUN TRUCK IS GONE AND I HOPE YOU'RE DURNED WELL SATISFIED!"

I wasn't the only one that got mad at him. The club was ready to expell him, but finally decided on a suspension. Trouble was, the old buzzard wouldn't let it die. He started talking about me on and off air to others, making most inappropriate suggestions about my qualifications as a ham. Completely out of line and unjustified. I had never done anything to him, nor had I actually met him in person. Of course, it got back to me. Fed up with this guy's attitude and antics, I finagled a personal introduction. Upon realizing who I was, he turned a little red! I then proceeded to inform him that if he did not cease and desist from his slander, that there would be legal action. If that didn't work? I think I remember putting it to him this way: Mr. ----, I have never met you before. I have never done anything to you. You have an "alligator" mouth and a "canary" a** and your mouth is fixin' to write a check yo' a** can't CASH! Do you understand me? You are not to speak to me, call or correct me on the air, nor have any contact with me whatsoever!" That old man turned pale as a ghost, dropped his head and said, "yes, sir", like a scolded little boy. I haven't heard a peep from him in 5 years.

W4JLE wrote:

> It has been my experience that the biggest "radio Cops" turn out to be no-code techs that have had a licenses for a year or so. I had one start on me one morning when I used the term handle.
>
> He proceeded to tell me how "handle" was a CB term and not used on the repeater. Being the shrinking violet I am, I went on to explain I used "handle" on 11 meters when it was a ham band along with a dissertation about correcting people who may be new and somewhat hesitant such as your wife.

>
> Yes, I think it did.

"Deliberately sending bad code" should have been challenged by more
readers than just me.  It says a lot about where you stand as well.

It was an ARRL VEC in Woodstock, IL ... put on by the
McHenry County Wireless Assocation. I could dig up the
names from the CSCE, but i don't think we want to put
anyone on trial here. :)

> Irrespective of who it is, it's an example of poor training of the VE

I really don't have anything to complain about... i didn't pay the
additional fee -- i just didn't take the extra class exam after I
passed the general class one.

Perhaps we need to have them submit an application to test. Color photograph must be included. Then the VEC can review the apps and give a thumbs up to some and a thumbs down to the "ones that don't look right."

 who
> are "helped" into a license and the fully published question pool

The old method almost required being inducted into the lodge by an existing lodge member in good standing.

 that

I'll agree with you here. For someone with no background in electronics, the only viable method of passing the exams is some memorization and/or word associations.

> That is, people can get a license so fast, you wind up with whole graduating classes that have no connection to the accumulated experience of amateur radio.

After 40 years in amateur radio, they will be saying the same about the new crop.

The beligerants probably "earned" their licenses the hard way (whatever
that is). Each new crop recalls their learning to have been the
hardest.

Ding ding ding ding ding! I agree with that.

I'll support the learners license good for two years or age 18,
which ever is longest. Maybe 25W on 10M and 440, otherwise all modes,

no repeater trustee stuff.

Just proves it doesn't take all kinds to make a world, we just happen to have all kinds. Must really suck to be someone like this guy.

Jerry Oxendine wrote:

> I agree that it may be better to allow a new ham to listen rather than jumping him on the air. He'll soon realize that we don't generally use certain terms. People generally try to fit into anything to which they are new and usually will come around to "doing as the Romans do" on their own.
>
> Like you, I've had a couple of run-ins with "radio cops". I once used the local auto-patch, pounded it down, and made the usual announcement- "K4KWH clearing auto-patch after third party traffic with XXXX......." R-cop proceeded to lecture me that I was to do that BEFORE bringing down the patch. I didn't see the difference--still don't--just so I made the required statement. I was nice to the old codger, but I was seething. Some time went by--maybe several years--when one night I eased down to the local Dairy Queen for a huge cone of ice cream. The local club was having their usual Tuesday nite VHF net on the same repeater. All of a sudden, a pickup changed lanes and ran a Chrysler off the road onto the sidewalk. Poor guy (car) busted a tire, ruined a hubcap, bent a wheel, and missed a light pole by inches. Pickup kept going. I broke the net with my call, told the net control station I needed to call the police because of a hit and run, and he immediately yielded the repeater. I brought up the patch, started to dial 911 and somebody pounded it down right out from under me stating, "THAT IS NOT EMERGENCY TRAFFIC"! Guess who it was. The same old geezer that jumped me about the patch pre-

Well, I don't like 'em either, but blaming them would shift the blame from where it justly belongs, and that is with the legislators. They deregulated the phone company federally. So the state thought they'd take a crack at the power industry. You ought to see all the fees, and surcharges, and taxes, and rebates on our electric bills now. Looks like it was designed by a committee, and nobody can figure out the damn things. The idea was to spur competition, but an unfortunate sequence of events, along with the help of some opportunistic and unscrupulous companys lead us to where we are now. It would have been difficult to foresee this particular outcome.

Well then, that's certainly a good thing. Passing a ham test doesn't show much about what hams know about radio and electronics...   :-)

I think that you have that backwards. You don't like *me* to ask questions. In a recent post you refused to answer my simple question: "Do you think that a test that allows people to pass without knowing the material is a good test?" because you said you didn't like my *debating style*... :-)

Here are 2 more questions you recently ignored. if you're going to ask questions, don't you think you should start answering some... :-)

(1) Do you think it was morally correct for Bash to circumvent the FCC tests by publishing the exact questions and answers, thus allowing

hams to pass the test by cheating?

(2) Do you believe it would be OK for me to lawfully but clandestinely obtain a copy of an ARRL employment exam, say from an employee who owes me a favor, and print and sell it to those seeking employment at ARRL?

Ed there are many degrees of yankeeness, begining at The Line and progresssing as you go further north. I'm a Yankee by about 35 miles. A Connecticut Yankee is about as Yankee as it gets.

So there are no third categories?

You Political Correct mavens insist that your choices are all there is. What would be the matter with some newcomers with an attitude of "I'm gonna get this and do it well, make my mistakes and get it right and to heck with the minor irritations, whatever they may be. Maybe I can learn something about it all from them, if I don't let the chip blow off my shoulder".

It must be in the water. NO one today seems to have anything but a fragile, easily destroyed ego. If I had been like that I'd have never made it into the teenage years, much less far beyond.

Hmmm. I know a lot of those guys. I ran exams just down the river from them in Aurora. In fact, the guy that started the testing group up there years ago and I were both with DeVry VEC originally. I can't remember callsigns, since I've moved, but there must have been some turnover that leaves some uninformed VEs, because the guy I know wouldn't do that or train his people to do that. Sorry.

> I really don't have anything to complain about...

Yes you do. You were prepared for an exam and an incorrect interpretation by a team that should know better kept you from taking the exam when you were ready. Although you might not get any satisfaction, they need to be made aware of the problem so it doesn't happen again to someone else.

LRod

It still raises my hackles a notch to hear on the ham bands clone
conversation from CB where not much but the frequencies and (maybe)
callsigns are changed. It always seemed to me that people who adopt a
new environment might be interested in adopting its conventions also,
given a little time.

 But so far I haven't called anyone down for doing it. Don't plan to
either. FCC has given the ham bands to the CBers, fair and square.

Gotta be paid for one way or another. Chalk up one good example of the
limits to scatterbrained deregulation. I'm a hardcore open-market
free-enterpriser to the core but this disaster has set the clock back to
justification for socialism, this is bloody ridiculous.
>
Here in Philly we pay the second highest rates in the country second only to
what ConEd gouges out of their NYC customers and have been doing so for most
of the prior century. The net result is that we're conditioned to getting
pounded by our power bills. Folks moving into this region from other places
routinely come unglued when they get their first PECO (or whoever it is
these days) bill. But there is some spare capacity here with more coming.
Two-three years ago the new-wave generating companies were mothballing
capacity. Now every steam turbine and generator shop in this country is
suddenly completely booked for years ahead for the first time since I was a
kid and that was a LONG time ago.
>
This thing hasn't even started. I noticed in today's news that the lawyers
and prosecutors are rolling up their sleeves and diving into this fiasco.

Don't you ever get tired of being wrong, Gnat? As it happens I did have a contact with a new ham where the very same thing came up, the zero without the slash on it in his callsign. I mentioned to him that it actually was a zero but the FCC's computers stopped putting the slash in the zero years ago. Evidently the FCC doesn't know the difference, either.

Yeah, I did read it and I also read it ten or so days ago in USAToday.

I once knew an OT who had been off the air so long that he was new to
repeaters, and when he finally got a two meter rig he called CQ on the
repeater just as he would have on HF.
It isn't always the newcomers who miscue.

I don't think Dick knows what a gentle correction is, just boot camp

mentality. Probably had the kid doing push ups or digging the base hole
for a free standing tower with a spoon.

See? All the protestations from myself and others have had an impact. You gotta wonder if there would have been any improvement in some of the questions had we not sounded off so much about them. Whoever changes the questions must have been paying *some* attention. I'llhave to sign into the HQ website and check out the current question pool. If a majority are written like those it represents a major change in things since I was an active VE. Inded it would be easier to just learn the material on those few. They would be hard to answer without knowing the material. 'Twas not alwas so.

Dick, a better response would have been, "So then you're joining the crowd," but no, you insanely accuse me of being the ONLY ONE that does what Larry does. Well, if Larry does it, and I do it, then I couldn't possibly be the ONLY ONE.

Additionally, you excuse yourself, Hans, Kelly, Jelly (Fred), Bruce, Steve (shrill), GrayJL, and all the ANONs, from the cluster of people free to be jerks. The only way you're statement could be true is if you and your cronies were made to be jerks at gunpoint, thus not of your free will. For that many gunmen to be present at so many geographical locations to pull off such a feat would make it a conspiracy, which makes you crazy.

I really try to provide a rational argument. I'll usually give you at least 2 or 3 tries after your initial shitty response to say something rational. After that, all bets are off.

Dunno when David did that but I was temporarily working in a small burg north of Jackson TN, winter 1980 or so, the locals had been paying three cents per kwh while I was paying eleven cents per kwh back home in Philly. I got there just after the TVA underwent some kind of major reorganization or another and the rates had just taken a huge jump upward. Everybody had unisulated homes

with straight electric basboard heat, etc. Talk about massive trauma . . I
couldn't muster a whole lot of sympathy for 'em.

Yes,they are supposed to be.

  These guys seemed pretty
> confident that they could charge $10 per exam

 By the authorizing law they are not supposed to charge beyond recouping
their expenses, unless it has changed since I was active. I understand
that the FCC has stropped setting the mandatory fee, so the VEC under
which they operate should be doing it.

FCC never did stipulate nor specify what constituted an expense, they
just said that the expense must be related to the testing and that a
record of all monies received and disbursed be maintained.
The fee receipts were always split by the VEC (ARRL here) and the VE
team. The VEC sets the details of he split.

Sorry to see my old machine -- I built ABE 4 -- sink to this level. That
sort of BS is why we put it on in the first place. 'Youse vill march in
schtrait lines und youse vill like it' was certainly the motto of some of
the local machines; our's was 'if it don't get you in trouble with Sam, we
don't care'. Curtis would have been eating his meals off the stove after
some of us got done with him.
When a few docs and the Federal Venereal Disease Control Officer got
clinical on the air, you could hear the strak jaws tighten for miles.

Golly, Jim, that puts you in the same bracket with Brian Burke and Larry Roll, who insist on machine perfect code! What an unlikely Three Mousketeers!

Actually there is an "official" APCO list but its use is
voluntary. Just like most anything else in this life.

Hans, apologies.  I wasn't aware of your sensitive bladder.  I'll avoid
early morning responses to your messages so you won't soil your pants.

I can't be held responsible if you peek at my responses to others.

There's that CBer attitude showing through.

Put any transmitter on the air or plane in the air and you are dealing
with gubmn't regulations.

"Roger that" is current military parlance...off the radio.

Has the same meaning (sometimes) as "absolutely."

A look at the stats of new licensees over the last decade
(life of the Internet, now 10 years old...most of the life of
cellular telephony, now about 14 years old) will show that
the overwhelming majority are the no-code-test Technician
class. QED.

The "40m problem" has been on-going since WARC '79.  That's
going to be a 24 years old "once again" by WRC 2003.  Is it "on
the table" in the USA agenda for WRC 2003?  [No...]

A problem with any vigilante group of self-styled "cops" occurs
when they run into another vigilante group having different
ideas of what is "best."  Nobody wins except the Real cops.

Remember that CB users outnumber radio amateurs by a
considerable ratio.

No, just greed and inefficiency by some private electric power
providers. In the Real "La-La Land" (Los Angeles), the
municipal Department of Water and Power has NO electricity
shortage. In fact, the DWP is today (Thursday) selling electric
power to mid-California!

No rolling blackouts in Los Angeles, none expected. The
only one "going berserk" is the press trying to make a
Big Story out of it. Idiotic journalism.

>metal box. I don't want to make this mistake again.

Do not use a metal box. Use a plastic box. Many kinds
available.

A metal box surrounding the FM receiver will shield it from
picking up anything but very strong signals...to strong to be
legal in a "wireless mike" type of application. Plastic is not
a shield to stop radio waves.

>Or if
>this isn't the best usenet group to post this in, can anyone point me
>to a more appropriate one?

The above answer to your problem is the quickest and cheapest.

If you want to have a very cheap cover for the FM receiver, go to
a supermarket and buy a plastic food container. Many different
sizes. Paint it whatever color you want with spray enamel.
Enamel works better than a lacquer paint on that type
of plastic.

I did that with a remote temperature sensing gauge that transmits
outside air temperature to an indoor indicator. The container
keeps rain out of the remote gauge. [Frequency is about 433
MHz, five times as high in frequency as the FM broadcast band]

In article <944ukq$4cs$1@iac5.navix.net>, "W4JLE" <Fred@w4jle.com> writes:

>Len, I guess I can understand your resentment towards those that obtained a
>formal education.

"Resentment?!?" I had 11 years of college-level formal
education at night while working full-time during the day for
15 years. My only "resentment" is towards the arrogant
recycled log bundles who accumulate paper without the
accumulation of knowledge.

>The fact is many have neither the ability or the self
>discipline to learn on their own.

I disagree. Did someone come along and inject you with your
"superiority" knowledge or did you develop that all on your own?

>They are not blessed with your tenacity and innate intelligence.

Tenacity has no relation to intelligence.

>The problem with being self taught is you have someone as ignorant as you
>for a teacher.

Oh, my. Will you start using swear words next?   :-)

>One wonders if a self taught instant extra has even considered the safety
>issues associated with high voltages and mechanical supports.

I wonder why some jelly-bellies want to get chewed on... :-)

The modern 1 KW final PA runs on about 50 VDC maximum
...roughly twice the voltage considered "safe" in the National
Electric Code for residence wiring. Not exactly lethal unless
one sticks 50 V wire ends into their chest.

Jelly, old bean, I broke into HF transmissions on 1 to 15 KW
tube transmitters. In 1953. Rather high voltages there. Those
PW-15s by Press Wireless had very sturdy mechanical
supports. I don't recall any of the many non-Extras who
worked at Army station ADA were fatally or even near-fatally
harmed.

>I suffered through a formal education that pointed me in directions I would
>not have even considered.

"Suffered?!?" You didn't feel you were "superior" at the time?   :-)

My college-level formal education was almost entirely elective since my "direction" was already made and in-progress. The formality of sitting in class listening to basic training in English and Math (when I had already used both on the job) was a requirement towards a piece of paper that said I was a Bachelor or something. I was already a bachelor, Jelly. :-)

I did "suffer" through my last English class since I intended to court the nice female instructor. Wouldn't have looked good to mess around with an instructor before finals and grading, would it? [we parted amicably a half year later in case you wondered]

>Things that I would have discounted on my own as
>being useless, I admit some where, but many came to be of valuable use in
>latter years.

Speaking of "suffering," I took a non-credit class in digital logic where the Japanese-American instructor had some kind of Prussian complex (strange ethnic cross-over). In this martinet's class an Exclusive-OR was not permitted. He wanted to "expel" me (from a non-credit class) when I brought in a standard TI Ex-OR quad chip. "Doesn't exist in my class!" he shouted. I've had required psychology classes where the instructors needed psych counseling worse than the students. I've had required history instructors who wanted to rewrite American history (in favor of the "south"). Bullshit most of them except for math...some of which I already knew and some of which I would never, ever use again.

Fred JLE, don't try to "lecture" me on college-level "directions." Try to "lecture" me on Extra class class distinction and your "superiority" of CW above and beyond every thing else in amateur radio.

Was it really "worth it" to sit night after night listening to some instructor-expert tell me what I had to know on my job when I was already doing my job successfully? Not really. Probably a third of my classes were attended by those who already knew what to do sucessfully but had to endure it all for some piece of paper "proving" they could do what they were already doing very well.

What does a student do during "homework?" Think about it. They SELF-TEACH by completing their assignment, showing their work. They only thing different between such self-teaching and self-techning from a text or informative article is that the instructor in a formal class will "grade" the student towards some achievement of a piece of paper.

Which do you consider the Most Important, Mr. W4JLE, actually having learned-and-accomplishing something on your own or having an accreditation certificate or diploma hanging on a wall? [I think everyone can see the preference but it

would be nice to see the words of rationaliz...oops,
justification as to which is "superior."   :-)]

>While your opinions of my stances were read and enjoyed, as always I
>disagree with you.

Naturally. You are so much more "superior."   [barf]

This is a bit like nailing jelly to a tree...

No doubt there is a lot of that, there always is, but blackouts cost buckets of money for everybody involved and big outfits like Intel deciding to build somewhere else has real-world ramifications.
>
The silver lining should be that it's a wakeup call for other regions even if it is more hype than reality. The power execs around here are in the news answering pointed questions in a very defensive mode. A couple state reps are calling for formal independent reviews of the situation here. Works for me.

I am sure that the Army put those people around 15KW transmitters with no training. At least we did not do that in the Navy.

Please explain your definition of the word Jelly, other than something to spread on bread with peanut butter, other definitions elude me.

As to your education, it certainly left me impressed.

I do have a problem following your train of thought sometimes, I am sure it is purely in my interpretation.

as ever

I have no idea what license class was involved - its hard to tell
these days with vanity calls.

I wish my wife was only "somewhat hesitant" to talk on the radio. It took me some time to convince her to get the license in the first place. She doesn't even like talking on the telephone. Of course, in person, once she gets to know you, she'll talk your head off. And I can't get her to shut up (especially while my favorite tv shows are on).

It's a classic case of officials burying their heads in the sand. Any schoolchild soon learns that you can't buy high and sell low and avoid financial collapse.Sure looks like they just ignored the liklihood that this *would* happen.

This is not something that developed overnight, of course. From all accounts it came from price controls on the retailers of electrical power while no controls were (or could be) placed on wholesalers (after the in-state retailers were forced to divest themselves of their own generating facilities, which was a curious requirement at best, pure socialism at worst).

This is not a problem that just struck like lightning from the blue, it took a while to develolp. Meanwhile did the state officials believe the problem was just going to go away because the solution wasn't pleasant?

And then not a single new generating facility has been built in California in the past 20 years. Where did they think the supply for all the growth demand was coming from? Meanwhile, the state is loaded with environmental activitists who feel real good about locking away all the natural resources for "posterity" instead of meeting the environmental protection challenges headon with sensible protective requirements that are enforced.

> Edison, the company that built practically everything we have out here,

Now you know why. I saw on TV today that PG&E and So. Cal. Edison's stocks have been downgraded on Wall Street to junk bond status. Whew!

> Our taxes will have to go up to pay for it now.

You know what that means. It'll cost twice what it should.

You're probably right, Ed. I'm still working to get my wife excited about radio again. And I've become the biggest advocate for new hams in my area. I like to be known as the ham anybody, including the newbee, can contact.

In fact, because of my friendly attitudes towards newbees, just about everyone in the area who is bringing a new person onto the radio for the first time almost always insures that I'm the first person they make contact with.

I've met a lot of interesting people that way. In fact, over a period of time, the numbers really add up and I'm never lacking of someone to talk to on the radio. Most of the time, I end up with too many people to talk to when I sign on (they know my normal on-air times, and are usually waiting).

```

There has been much talk about the Clinton legacy. As William J. Clinton leaves office, lets take a look at a few things around the country to discover the real Clinton legacy.

Politics & Race Relations...

- A wider divide between Republicans and Democrats than anytime in recent memory.

- A wider divide between blacks and whites than anytime in recent memory.

- Massive expansion of executive power over almost all aspects of American life.

Energy...

- An energy crisis in California, complete with high prices and rolling blackouts.

- High home heating fuel, and vehicle gas, prices nationwide.

Economics...

- An ongoing loss of income for the often white middle class over the last eight years.

- An unwavering increase in the gap between rich and poor.

- An unstable stock market.

Crime Control...

- Youth violence, and other crimes by youth, higher than any other presidential period in history.

- The largest prison population in the world.

- A memory of a president impeached for lying under oath.

Civil Rights...

- Ongoing discrimination against whites in black-owned schools, organizations, and businesses.

- Continuing hiring discrimination against whites through affirmative action programs.

- Widest suppression of religious freedom in the history of this country.

- Significant loss of gun ownership rights.

- Failed program of allowing gays in the military.

Education...

- Strong emphasis on liberal political bias in classroom instruction at public schools.

- Government finance of private colleges and universities with extreme liberal political bias in classroom instruction, while at the same time refusing finance to conservative private schools.

- Emphasis on "feel good" teaching methods rather then on teaching methods which challenge students.

- Least well educated children during any period of nation's history.

Family...

- A historic record for divorces, single parent families, and children born out of wedlock.

- A wider divide between parents and children than anytime in recent memory.

- Diminished parental control over their own children due to endless government intervention.

- A historic record for children giving birth to children.

- A memory of an extramarital affair while president.

Sadly, I wish I could say that these things will improve after Clinton leaves office. But, as long as liberals continue to control so much of American life, these things are simply not likely to improve.

Like Clinton did, Bush also has an opportunity to influence each of these things, but he has not shown any indication so far that he intends to challenge the liberal stranglehold on this country.

Brian, I'm in West-By-God-Virginia on a full time basis now. The
suitcases have been stored in the barn.

My "opponent" doesn't have a license and has shown little evidence of
any class. He sits at the keyboard all day doing what he accuses others
of doing. He is a twelve year old trapped in a body which has been
shedding skin cells for about seven decades.

Don't get me wrong--I like a lot of older folks. I hope to be one
someday.

I don't think so. The FCC allocates spectrum for amateur
radio use. That spectrum isn't allocated BECAUSE
someone passes any tests. Try to get it straight.

White Castle hamburgers, lil bitty things, are available in
ten-packs at Ralphs Supermarkets here in Los Angeles.
Small and over-priced, haven't bothered with them.

Los Angeles is considerably farther west than St. Louis.

Have you tried Ripple?

I am in great agreement with you on that, Hans.

Incidentally, Southern California Edison Company (under its larger
umbrella corporation) did not "build everything 'we' have" here.  It is
the largest private electric power supplier in this state, but not the
only one.  'Edison' has been buying power from other suppliers for
years...but got suckered into complacency by regulated rates for
such buying and selling among power suppliers.  LA Department
of Water and Power did not.  LA DWP presently charges about
10 1/2 cents per KWHR to residential subscribers.  Washington
state power companies serving Puget Sound area charge about
6 1/2 cents per KWHR (source:  residential billing from the two
named areas).

Cecil, the only "unpredictability" is two things: Management of
private power companies; over-inflated rates now possible by
sellers of electric power.

The municipal Los Angeles electric power provider, the
Department of Water and Power, has no electric power
shortage. [will you agree that Los Angeles is a large city?]
The LA DWP is presently selling electric power to middle
California. There are no rolling blackouts in the LA DWP
service area, none expected for a long time.

I know that kinda spoils a good back-and-forth, but that's
the situation in Southern California now. :-)

What is this glorious, religious connection to the past and only the past of amateur radio?!?

We already have the self-proclaimed expert on morse code over landline in Jeff the Herman.

If you want some cogent historical information on the history of ALL radio in the first 30 years of its life, read "Continuous Wave: Technology and American Radio, 1900 to 1930," by Hugh G. J. Aitken, Princeton University Press, 1985, 588 pp (clothbound, ISBN 0-691-02390-5). Aitken is George D. Olds Professor of Economics and American Studies at Amherst College. Aitken also wrote "Syntony and Spark: The Origins of Radio," ideal for those 'historians' who don't know much about vacuum tube theory.

Yes, some doofus will jump in here and loudly proclaim about "200 Meters and Down," by DeSoto. To those I would direct to Aitken's book and the large footnote on page 512 of the clothbound edition (Towards the end of Chapter 10). Aitken is looking at the history of all radio, not just the biased view of some amateurs. Amateur radio must coexist with all other radio services and it would serve all amateurs to consider such coexistance on a realistic basis.

It is not fully realistic to get historical data from a few biased sources and spend time in the lodge hall doing high-fives without looking out the window and everyone else. Open the window curtains, clean the glass, and look out. You may not like the view but that's the rest of the radio world, like it or not.

W6MJN loaned me his copy during a Wednesday lunch. Fascinating history.

Okay, go back to your old 1934 ham magazine issues. Be careful that those old acid-paper pages don't crackle and break.   :-)

Yep. Seniority makes little difference in making a gaff. And neither
"CQ" or "W7xxx monitoring" say in plain english what it is we really
want, namely a contact. Hobby jargon and knowing it's proper use is
important, and if you try to operate without knowing it, then let's
hope that you're not too sensitive of a person...
(Human nature being what it is.)     :-)

The first published 10-code was in an APCO bulletin in January of 1940, however they don't claim to have invented the code. They tried to standardize it in 1973, but it never caught on and there are hundreds of versions currently being used. Yes they call it "official" but nobody seems to notice... (Like ARRL phonetics?)

Len, not one time have I made derogatory remarks towards you, nor have I made nasty remarks about your positions I disagree with.

Why do you feel that it is necessary to make smart remarks and idiotic childish repartee?

If you cannot afford me the same courtesy I extend to you, please find someone else to respond to.

Are you not capable of defending a position like an adult?

The rapidly-expanding Family Radio Service has exposed millions of young people to the world of radio communications. But now, where is a young kid to go who has is interested in experimenting with radios and get more range than the typical 1/2 mile of FRS? MURS might help a bit(if Motorola doesn't get their way), but you know that a growing mind is eventually going to want more than just this. GMRS doesn't have the resources, and is not a service that was created to foster experimentation. Like it or not, the typical young person ends up cutting his radio experimention teeth in the Citizen's Band service, because there isn't a reasonable entry-level ham license for kids(it is even worse now after restructuring, what with the elimination of the Novice Class).

Everyday now the USA is falling further and further behind Europe and Japan in the wireless communications race. As hams, it is time we make an effort to insure that our young people are provided with the proper environment, incentives, and role models to properly learn radio communications techniques and etiquette. It is time for hams to stop complaining, step up to the plate, and take an active role in seeing that our bright, young technical minds are being taught properly.

As a result of this, I have reworked the Communicator entry-level license proposal I submitted to the FCC last year, and I will now be proposing a new entry-level Amateur Radio class known as the "Colt" class. I submit a draft of the proposal for your review below. Please keep in mind that the future of American involvement in wireless communications development depends on us to properly encourage and teach

tomorrow's experimenters, operators,
technicians, and engineers...

****

Proposal to FCC to institute an introductory-level "Colt" license class in the Amateur Radio Service - REV A

In the late 1980's and early 1990's when the current Amateur Radio Service Technician Class license was conceived and implemented, it was an appropriate alternate introductory license class. However, due to the recent elimination of the Novice Class license, and as a result of improving technology; the Technician Class license no longer serves well as the only introductory license, as it is doing poorly in drawing young members into the Service. As a result of license restructuring, it is now actually harder for young people to obtain an Amateur license than it was before restructuring.

In this critical era of global competition, especially in the wireless communications arena, it is essential that we provide a means for properly educating our young people in RF communications operation and theory.

Today, technologies like the Family Radio Service, high-speed telephone & cable modems, the Internet, and inexpensive cellular telephones, have overshadowed the privileges of the Amateur Radio Service, and made the requirements for young beginners to obtain a Technician Class license out of date. Additionally, the Technician Class license has now evolved into a beginning and ending point for most modern day Amateurs, who are mostly interested in VHF/UHF communications, rather than HF communications. Incentive licensing has virtually been eliminated.

The need for a Service dedicated to the goal of teaching young radio users proper radio operation techniques and etiquette can clearly be seen in the disarray present on the 11 meter Citizen's Band Service frequencies. The fact is, the Citizen's Band has become the defacto introductory service for young people just beginning to learn to experiment with radio; yet the Citizen's Band is a very poor environment for young people to be learning in.

Therefore, it is recommended that a new "Colt Class" license be added to the Amateur Radio Service expressly to encourage young individuals to enter the Amateur Radio Service to improve their understanding of RF communications theory, provide a healthy learning environment, and encourage radio experimentation.

On the 70cm UHF band, Colt licensees would be restricted to voice communications on 5 simplex-only 20khz-spaced channels on 446.00, 446.02, 446.04, 446.06, and 446.08 Mhz; and digital communications up to 19,200bps on 1 simplex-only 60khz bandwidth channel on 446.14Mhz.

On the 1.25m VHF band, Colt licensees would be restricted to voice communications on 5 simplex-only 20khz-spaced channels on 223.42, 223.44, 223.46, 223.48, and 223.50 Mhz; and digital communications up to 19,200bps on 1 simplex-only 60khz bandwidth channel on 223.56Mhz.

To encourage experimentation/understanding of antenna and VHF/UHF RF propagation theory, Colt licensees would also be allowed to setup and/or operate through a VHF/UHF crossband, simplex user input/output, repeater station on two 20khz-bandwidth channels on 223.52Mhz and 446.10Mhz. This would allow them to setup an inexpensive repeater system by interconnecting the voice/mic connections via a resistive circuit on two simplex radios; and would not require expensive, and difficult to understand, cavity and duplexer filtering at the repeater station site. User radio costs would be low, as they would only need a single simplex radio. As a result of the characteristics of this type of repeater, the repeater builders and users would learn to coordinate frequencies, and user groupings based on environmental conditions, so as to acheive optimal results.

Colt license users would also be subject to the following restrictions:

(1) Individuals applying for a Colt Class license must be under 19 years of age at the time of license application or renewal. The license is valid for 5 years.

(2) Fixed control station antennas will be no more than 6.1 meters (20 feet) above the ground or above the building or tree on which it is mounted.

(3) Transmissions limited to 5 watts ERP, or less.

The new license class would have the following goals:

1) Encourage more young people to enter the Amateur Radio Service, by providing an entry-level ARS license class that includes privileges allowing reliable short-range voice and data communications.

2) Not significantly impact existing users of the affected Amateur Radio Service frequency bands.

3) Encourage basic knowledge of radio, electronics, operating principles and etiquette among a wider segment of the general population.

4) Take advantage of the success of the Family Radio Service, and provide a path for those young users interested in further radio experimentation.

The Colt license exam would consist of 25 fairly simple questions. Emphasis would be put on understanding the existing operational, safety, etiquette and emergency questions from theTechnician Class question pool that relate specifically to Colt Class license privileges. All questions containing calculations would contain small integer(whole-number) input values and have relatively small integer results. Colt licensees would be required to have a general understanding of Ohm's Law and Power relations. They should be required to have a general understanding of how antenna length relates to wavelength; and have a knowledge of transmitter power, antenna gain, transmission line loss, and the ability to perform a simple ERP calculation would be required. General knowledge of simple resistive circuits, and their power dissipation, would be required. Knowledge of capacitors and inductors would not be required.

Stewart Teaze - N0MHS

I didn't have any spectrum allocated to me until I passed my test and got a license. That's pretty straight. But you knew that I was just yanking Ed's chain didn't you? I didn't expect to get two fish with only one hook... :-)

>I am sure that the Army put those people around 15KW transmitters with no training. At least we did not do that in the Navy.

I'm sure that your military experience is marginal at best. Did you really reef those sails or weren't you really the cook's helper in the galley? Did you learn morse code by banging on pots and pans or practicing with a spark rig? Were you able to find the sweet spot on the galena crystal?

Yes, US Army signalmen got training. Most of the MOSs at ADA were Field Radio types. A few like myself had different radio MOSs and adapted, learned on the job.

>As to your education, it certainly left me impressed.

I doubt that. Nobody can beat the "superiority" of an expert CW op, can they?

Did you think my education "stopped" after 11 years of formal classroom courses? Certainly not. Myself and colleagues in engineering kept on with self-education just to keep reasonably up-to-date in electronics and radio. Some for no other reason than to keep a job. Most of us for the reason that it was all, repeat ALL, so damn interesting!

>I do have a problem following your train of thought sometimes, I am sure it is purely in my interpretation.

Maybe next time I will "send" in morse code dots and dashes so that your "superiority" in code will let you understand it.

No, I think not. If you can't learn to read properly, there isn't much hope left for you to self-educate yourself in radio on up to 1960 or 1970s level. I might have suggested a subscription to QEX to learn the cutting edge in US amateur radio...but you might have cut yourself. No Band-Aids from me.

37,
didit

At one time here, roughly two weeks ago, some electric
power brokers were charging FORTY times per KWHR
versus the same rates of 1999.  I don't think anyone saw
that kind of greed.

>> In the Real "La-La Land" (Los Angeles), the

The LA DWP is not perfect.  It has been involved in some
management-politics scandals in regards to water, the W
of DWP.  Since they are a municipal organization, the
county supervisors got a new manager.  The result is
enough electric power for this service area plus the
capacity to help out other areas in California.
```

>No doubt there is a lot of that, there always is, but blackouts cost buckets
>of money for everybody involved and big outfits like Intel deciding to build
>somewhere else has real-world ramifications.

Agreed. Every zone-refining boat going slowly through the furnaces has to be re-melted and started over again if the RF zone heater goes off-line. There's a whole heaping glob of semiconductor makers up in Silicon Gulch...and a few of them down here in nearby Riverside County.

The state of California is not perfect. The state Congress learns rather slowly (a semi big rig suicider might have shaken them up a bit, heh heh). Between the state and the city of Burbank, Lockheed called it quits here and went to a kindler, gentler Georgia. Not on power, but on taxes and other regulations. Burbank = Lockheed used to be an equation. No more. The last Lockheed building has been levelled. End of an aviation era for the locality.

My wife and I were in Burbank this morning. Burbank has their own powerplant and independent about it. The stores in Burbank have cut back severely on lighting to avoid having to buy electricity from elsewhere...such as the LA DWP. :-)

>The silver lining should be that it's a wakeup call for other regions even if
>it is more hype than reality. The power execs around here are in the news
>answering
>pointed questions in a very defensive mode. A couple state reps are calling
>for formal independent reviews of the situation here. Works for me.

Absolutely. Roger that. 10-4. Affirmative. :-)

It's not the "tree huggers" doing it. It's not the municipal power companies doing it. It's not the "fault" of free enterprise. It's the fault of BAD MANAGEMENT of private electricity providers still operating in a monopoly service area. It's partly a fault of bad thinking that a utility service is "just like" the free enterprise selling of goods. It isn't. None of us can go to any store and pick out a bargain on electric power. There are no plugs and jacks on the utility poles that allow us to change connections to "another" electric power company based on personal preferences or KWHR rates. Utilities do NOT have "goods" that can be handled in any conventional free-enterprise system.

Imagine a situation where this pseudo-free-enterprise system was carried to sewer services. [don't want to think of it!]

Brian:

Where did Hansl say that? He made a true statement, that Usenet newsgroups are *not* amateur radio. This traffic does not travel on any amateur radio frequencies, unless someone is porting it over to packet, which I strongly doubt. That aside,

are you saying that people on the ham phone bands *never*
behave like "jerks?" That there are no jerks at all in the whole
of amateur radio? If that's what you think, then I think (notice I
didn't say "methinks" -- a true sign of a Usenet jerk!) you'd
better follow Mr. Hollingsworth around for a week!

I see. That way, you get to dumb-down *both* the code and theory tests with one stroke! Makes perfect sense, from the point-of-view of an ARRL HQ employee, who is worried sick about keeping his job and is desperate to do ANYTHING to get a few more people interested in getting a ham ticket and perhaps joining the League! Desperate times call for desperate measures, I guess.

Ed:

I didn't miss the point. The requirement motivates the learning; the learning motivates the need to acquire the equipment. Those who learn the Morse code well enough to effectively employ the CW mode on-the-air will also have the equipment to do so; therefore,

they will be equipped to use that mode in the event of any sort of
emergency where it would be practical to do so.

>
>That's different, right?
>
>73, Jim AC6XG

Jim:

In such a situation, an armed response by law-abiding citizens would definitely be in order to prevent the armed environmentalists, convicted felons, abortion rights activists, and Ku Klux Klansmen from *actually* shooting our elected Congressmen and Senators. The responsibilities of lawfully-armed citizens are a two-way street. We have a responsibility to be ready to defend freedom with our lives, our fortunes, and our sacred honor. People such as you describe are probably not as committed to their cause as those of us who are just ordinary, decent citizens who believe in and support our Second Amendment rights.

What causes are you willing to fight and die for, Jim? Are you willing to die for baby killers, tree-huggers, and violent racists? Our high-sounding ideals don't stand for much unless we are people who believe in highly moral principles. The environmental issue aside (I consider myself to be an "environmentalist" also), the people you mention above are just amoral, self-serving criminals. People such as that are usually cowards, and are not willing to risk their lives to defend their beliefs.

True, he did not -say- that. True, Riley gets to deal with the few
jerks in amateur radio who violate the regulations while on the air.

However, taken in the context of the Clint DeSoto thread where I
highlighted the idea of an amateur radio brotherhood, he implied that
hams talking to hams OVER THE INTERNET have no need to share in any ham
brotherhood.

Such an idea spouted from your mouth in years gone by. You appear to
have a loyal following.

Dick, I find you Extraness incredibly ineffective and unmotivating
because I still believe that intentionally sending bad code is wrong.

Go send your bad code.

My point is that there are very few of these codes are in general use,
having to look them up defeats the whole intended purpose of the things.

The VE's were incorrect to ask for another fee to take the extra. That should have been covered under the one fee.

Also, the VE group can keep a part of the fee, but only enough to cover their expenses. Their time cannot be charged. The rules did just change on keeping records of expenses incurred.

It sure is. I find very little about "journalism" in SoCal's media to be anything BUT sensationalist. Not that it isn't anywhere else.

Kinda like the 30MPH "pursuit" with 100 crusiers "chasing" two men..?!?!

Oh noooooooooo....NOT again!

Stewart, I think this "new" license class was the RESULT of one too many "Colt's"........Colt 45 Laager's, that is......

The FCC MAY assign another RM, but I bet a Happy Meal that they just say "Been There, Done That".....

They just got done paring down the number of classes...They did NOT do that just to make room for NEW licenses.

There are already NUMEROUS stories of YOUNG kids (7-8-9) passing the PRESENT Technician license, so I really doubt they will predisposed to creating something "new".

If you REALLY want to make an impact on kids in Amateur Radio, try writing a text FOR kids...THAT will help them along the way. Trying to wrangle a "new" Amateur Radio license out of the FCC for posterity's sake isn't it.

> If you respond to the Colt License Proposal thread, please drop alt.radio.family from the header. The majority of FRS users are simply American families using these low-powered radios as short range "intercoms". They are not radio hobbists. Thanks.

You're welcome...but hang on........

WHAT poll did you conduct that has determined that "the majority of FRS users" are "not radio hobbyists..."...???

Furthermore, as much as I disdain Stewart's attempts to again create something the FCC (and the commenting public in general) has determined to be unnecessary, it is still directly aimed at FRS users who might otherwise wish to expand beyond FRS use. "alt.radio.family" IS a valid forum for his ideas, as irrelevant as they may be.

Lastly, unless you can show me where you are the "listowner" or the charter holder for "alt.radio.family", I am hard pressed to accept any of your admonitions to NOT post to that NG. Last I checked, it IS an OPEN forum.

The Technician Class license is so easy to get now it's not even funny. You sure you are not being a little jaded in your view when you think every kid wants to work DX on H.F., hence starting out on CB Radio shooting skip?

According to the ARRL VE Manual , Eith Ed. , 2000, p. 50,
under "Retesting,"
"An applicant who fails an element at an ARRL/VEC-coordinated session
may retake that element at the same session, if (1) the administering
VE team has a different version of that element, which the applicant
hasn't taken (section 97.509), (2) the VE team has the time and
resources and is willing to readminister the additional version; and
(3) the applicant pays an ADDITIONAL (emphasis mine) TEST FEE (because
the candidate is then considered a walk-in candidate who just arrived,
even if he or she arrived at the beginning of the session). Again, a
retest fee charge is only required if an element is retaken, after
being failed at your session."

The W5YI VE manual has the same thing .

The reimbursement fee (test fee) is the only fee that may be charged at
a test session. Now, if the test session occurs at a hamfest,
instruction class, or other gathering, an admission fee may be charged
and it has to be kept seperate from the test fee. If you're just going
to the test sesion at a hamfest, you shouldn't be charged a fee.

Fred@w4jle.com (W4JLE) wrote in <93nntl$4ee$1@iac5.navix.net>:

Well Fred things have changed in your 62 years. Some for the better, some for the worst. As many things as you can come up with that are bad, I can come up with that is good. Things change!

I have been reading this groups for a good while now. Whe I started I was very much a pro-coder. I listen to what the no coders had to say as well as the pro-coders. Hint: If you really want to learn listen closely to the side your disagree with. I did that! Thank you all the no-coders that posted. There is at least one (ex) pro-coder that listened.

Here is the things I learned:

1. the code requirement doesn't improve the character of the hams joining the ranks.

2. It is just a tool/mode. Sure it tugs at the heart strings, but it is just a tool/mode. A tool that requires a lot of study to use. Modern digital modes get thur just as well, without the years of study that is required for CW.

3. I never heard a no code person every suggest CW should go away. They just believe it shouldn't be a requirement.

4. Pro coder aguments are either emotionally based and/or false.

I have never heard a good reason for keeping the code requirement. I don't believe that you can either. I can only think of one, that is it might spark an interest in CW by someone that didn't have it before.

>My point is that there are very few of these codes are in general use,
>having to look them up defeats the whole intended purpose of the things.

I don't completely disagree with that. In fact many public service agencies have gone to plain English for just that reason. I think that the intended purpose of the 10-codes and the Q codes is to save radio time. To be effective they must be learned, that's true. But once learned, they do serve the intended purpose...

The current mainstream Technician license class is easily attained
by young people and meets these goals perfectly; your proposed Barbie
Doll class would establish a channelized CB-like ghetto separate from
mainstream amateur radio, creating additional "we vs. them" divisions
in the Amateur Radio service. Personally, I think this is just another
spin on your attempt to establish a defacto expansion of FRS and MURS.

Maybe if you had paid more attention in class it wouldn't have taken 15 years?

>>The fact is many have neither the ability or the self
>>discipline to learn on their own.

> I disagree. Did someone come along and inject you with your
> "superiority" knowledge or did you develop that all on your own?

You disagree that "many" people don't have the ability or self-discipline to study on thier own?

There's NO controversy here, Len. It's a fact. Many people DON'T have EITHER self-discipline OR ability (ie skills on HOW to study...) to do it "on thier own".

>>They are not blessed with your tenacity and innate intelligence.

> Tenacity has no relation to intelligence.

In YOUR case, this is true. But people with a greater tenacity to "stick with it" generally ARE more intelligent, simply because they have applied them selves more aptly.

> I wonder why some jelly-bellies want to get chewed on...

Kinda the same reason SOME people post in newsgroups for which they has expressed the intent to NOT be involved in, yet feel compelled to tell others how THEY should be doing things.

> Jelly, old bean,.....

More of those "names" that you insist you don't tease and taunt people with until they return same in kind, thereby giving you reason to claim "VICTIM!!! VICTIM!!!"

>....I broke into HF transmissions on 1 to 15 KW tube transmitters..."

Oh geez...more of the "There I was at 30,000 feet" stories. Of course as soon as a licnesed HAM does that, we are "resting on our laurels", or otherwise stuck in some time warp of technology.

Try again, Lennie.

>The formality of sitting in class listening to basic training in
>English and Math (when I had already used both on the job) was a
>requirement towards a piece of paper that said I was a Bachelor
>or something......

Some of us were smart enough to "CLEP" out of those, Lennie, saving money AND time.

>I was already a bachelor, Jelly.

More "endearments" that he denies using....WHY does Lennie lie?

> Fred JLE, don't try to "lecture" me on college-level
> "directions." Try to "lecture" me on Extra class class
> distinction and your "superiority" of CW above and beyond
> every thing else in amateur radio.

Of course YOU being the "all-knowing" about Amateur Radio of ANY class...???

> Was it really "worth it" to sit night after night listening to some
> instructor-expert tell me what I had to know on my job when I
> was already doing my job successfully?

CLEP...DANTE....ACT-PEP.... You DIDN'T have to do it "that way" (classroom and night school), however you DID do it because everyone else TOLD you you HAD to do it THAT way because THAT was the way THEY did it. And you believed them, or were too ignorant to investigate non-traditional educational opportunities.

Thankfully, Ham Radio allows you to "do it" in numerous forms and functions. Contrary to YOUR opinion.

> What does a student do during "homework?" Think about it.
> They SELF-TEACH by completing their assignment, showing
> their work.

Which is ASSIGNED by the instructor in a STRUCTURED teaching enviroment, NOT one in which the "student" must attempt to glean that which is "important". The instructor STILL "tells" the student what to study.

> They only thing different between such self-
> teaching and self-teching from a text or informative article
> is that the instructor in a formal class will "grade" the student
> towards some achievement of a piece of paper.

Obviously you have never been an instructor or teacher, and have no concept of the group-paced versus self-paced instructional techniques, Lennie.

And as much as you decry the accumulation of "paper", it IS a societal necessity. Whether it is an FCC license, EMS certification or college degree..."Because I SAY I know it..." is NOT sufficient in our society.

> Which do you consider the Most Important, Mr. W4JLE,
> actually having learned-and-accomplishing something on your
> own or having an accreditation certificate or diploma hanging
> on a wall?

Hmmmm.....I did both. Did it on my own AND have a diploma and NUMEROUS certificates to validate accomplishments, learning, etc. Oh...SOME class room in there too....and it didn't take me 15 years.

> [I think everyone can see the preference but it
> would be nice to see the words of rationaliz...oops,
> justification as to which is "superior."

One need not be "superior" to the other...only appropriate to the circumstances of the "student" and the subject matter.

>>While your opinions of my stances were read and enjoyed, as always I
>>disagree with you.

> Naturally. You are so much more "superior."   [barf]

More "tolerance and civil debate" from the Maximally Engineered, Non-Licensed Buffoon.

> This is a bit like nailing jelly to a tree...

If I hear "10-18" it immediately comes to mind that my VFO is
probably *way* out of the 17-meter band.

If I hear "QSX" it immediately comes to mind that I'd better split my
VFO's if I wanna work this guy.

Dwight,

Of course you are entitled to your own interpretations and views.
However, this newsgroup is about amateur radio, not politics, relgion,
or other unrelated issues, and it is an inappropriate forum for personal
soapboxes on issues unrelated to amateur radio. I also suspect that most
subscribers to the NG probably couldn't care less about US politics or
domestic issues -- newsgroups are not just for domestic US consumption -
they're international. I'm sure there's a
"US.politics.domestic.anti-liberals" or something newsgroup somewhere
out there which is more appropriate.

No disrespect intended.

73, Darrell
nr3y.

I personally know an eleven-year-old Extra. 20-wpm-code-test Extra, at that. He was 10 when he passed the 20wpm. He was 8, IIRC, when he passed the Tech exam.

Sounds believable to me. My 10 and 11 YOs are studying. They want to
pass the 5 WPM in time for field day.

Intel has been building "elsewhere" for many years. My wife works for the company (IDC) that designs and builds Intel's plants, and they currently have expansion projects going on for existing plants in Oregon, China, Ireland, and Israel (those that she talks about) as well as a lot more countries.

IIRC the DWP was exempt from the CPUC's fiat that production facilities be sold. If SCE, SDGE, and PG&E were allowed to keep their dynamos as well, would there have been a "shortage"? Doubtful.

Dittos Larry,

The League uses phrases like: "We're protecting the service and your spectrum from external threats.", but they won't lift a finger and have no problems with watching the service rot from within.

Ed, there was already CB for those that didn't want to learn. Why did the ARRL push to dumb things down? The losers already have a radio service, why'd the League push to let them destroy my hobby?

Employees chalk up bonus retirement points if they spread corprate policy during their off-hours(or at least a pat on the back at the weekly office meeting). With you in the newgroup Ed, I don't need to get QST, I can get the latest policy B.S. at the click of a mouse on one of your posts.

I know you don't agree, but the proposal was a dumbing down proposal.

Hindsight always being 20-20 the potential was there and should have been recognized. It's not exactly the first time greed became a monster. There isn't a corporate entity out there which won't commit economic rape if it can legally get away with it.

Been there, huge complex. Must have moved into the old Martin-Marietta complex. That's exactly how cities fall into decay like the most of the Northeast Corridor cities have, the smokestackers here all bailed out for the sunbelt to a large extent get away from the unions, outrageous taxes and other expenses. Unstable power availability has to be a hot topic in the Silicon Valley board rooms.

I have to agree. As Kelley put it it's been an "experiment". A bloody failed experiment. I noticed that yesterday that Davis signed a bill which dropped the generating station spinoff requirement. The state has already dumped $1.4 billion into the fray and this is only the opening gun. Yeah, I expect there will be some steps taken back to a more viable blend of reality vs. deregulation.

Loverly thought. We already have a form of that, sewer taxes and regional self-supporting sewer authorities. They're non-profits so far and we don't have sewage meters in the basements. Yet.

///// C L I P /////

Please take your American politics to alt.bloody.sleazy.washington newsgroup.
This one is an international forum about amateur radio and not about
second-rate governments in north america.

In other words, bugger off mate.

Graeme

 Hey, why don't we just finger print them and give them a license. If a
young person cannot pass the tech exams today they are:

1. really NOT that interested in radio anyway
2. retarded and illiterate ( I know lots of extras that fall into that
category )
3. Wanting to simply sign on dotted line for radio frequencies access.
 ( To my knowledge this is still a violation of ITU standards )

There are five and six year olds who have passed the EXTRA class test.
That's how easy it is to pass a ham exam with very relaxed exam
requirements.

There you go again making assumptions about what other people would want. It is the fallacy that has spawned all of the failures of well intentioned efforts.

The fact remains that there are people out there who rob banks every day, even though it is far easier to just go to work every day.

How do you explain that? Or does it not exist because it doesn't make sense?

The entire state of California is on a self-inflicted stage III power emergency. Most probably so that The State can scare the people into a government takeover of the grid (California Nationalists?). It appears we prefer to complain and react to symptoms rather than address the causes. The stories in the news don't make sense either, because all we're hearing right now is finger pointing and panic. It's very hard for me to beleive that this calamity couldn't have been averted at any point on a time line if only someone would have acknowledged it.

It only reinforces my observation of social calamity in spite of well intentioned assumptions.

Also, please re-read my posts in this thread. I take it you aren't getting it, or are avoiding my points.

Obsession is holding on to the belief that the train needs to go faster, even though you know in the back of your mind the tracks aren't going together as planned.

It is easiest to simply learn how to figure out the specific question
from a Q&A book or use a given formula than it is to learn about how
things work and how to apply knowledge to unique problems. But then I
already stated that I preferred to see an entry level ticket that
requires one to gain experience before being entrusted with expanded
and more permanent privileges. The Novice ticket instilled much pride
in the service, and I beleive most of us that had one (pre-VE) recall a
great fondness of the experience and find more respect for those who
did too. If you didn't, you missed out and might never "get it".

Indeed it would be a somewhat segregated area for younger people to get started in ham radio. But that is a big part of what could make this work, as the main idea is to set up a small, less intimidating environment for young beginners, where they can work primarily among their peers, and those willing to help them learn. I have thought about what you are saying about a "we vs. them" division, such as what used to exist with the code/nocode divide(and I suppose still persists); however, I think the difference between a Colt and a Technician would be akin to the difference between a General and an Extra, and not like the old difference between a Nocode Tech and a

13wpmGeneral/20wpmExtra that was so devisive.

> Personally, I think this is just another
> spin on your attempt to establish a defacto expansion of FRS and MURS.

Well, I suppose you are right there. If something can't be done to create a better environment for kids to experiment on the virtually unused VHF/UHF bands(with the noted exception of a few high-profile repeaters), then nature will take its course, and water will follow a path of least resistance. I'm just trying to create a small area of "lower resistance" and "higher potential" for young experimenters on the ham bands, where I think it deserves to belong - rather than in the Personal Radio Services.

I look at the current "communications gap" situation that is developing between the United States and Japan/Europe in the same vein as the "missle gap" that started to develop between the USA and USSR in 1958. However, today's problem is probably more real and dangerous, yet less obvious, and more insidious than the problem of 1958. There will be no "Sputnik" to help immediately shock us back to our senses, and therefore no equivelant to the National Defense Education Act will be forthcoming anytime soon.

I am curious - are there any hams that remember what the policy of the ARRL, FCC, and hams in general was in 1958, in regards to the issue of Sputnik? Were there any pushes back then to get more young people interested in Amateur Radio? From what I can tell, Sputnik does seem to HAVE been a factor behind the push for implementation of incentive licensing during the late 50's and early 60's. However, as is usual in the Amateur community, change occurred very slowly and painfully - with the the first real change taking 10 years to even be started to be implemented.

Do you and your 10 and 11 YOs have FRS radios? Do they want them so
that they can talk with their friends?

Interestingly enough, I found the following on the ARRL web site:

http://www.arrl.org/news/stories/2000/10/04/2/

It mentions how Sputnik spurred the creation of the NDEA and NASA(and eventually our trip to the moon), but it doesn't mention anything about hams, or what hams thought or did about this significant event.

>made nasty remarks about your positions I disagree with.

Sorry, sport, not true.

>Why do you feel that it is necessary to make smart remarks and idiotic
>childish repartee?

Such seems to be the only thing you understand. If you jump in with the idea of "superiority" in all radio by virtue of morse code ability, then you've made a smart-ass remark and idiotic repartee.

When you come back with accusations of "ignorance" insofar
as self-teching, you made a smart-ass remark and repartee.

When you come back with accusations that the US Army
never trained its signalmen, then you made a smart-ass
remark and idiotic repartee.

When you mouth off about a California state power
situation being the acts of "tree huggers" you are way out
of line and begging to be nailed to a tree.

When you make a lot of statements of intolerant morals of
generations younger than you, all the time waving some kind
of moral-ethical flag of righteousness, then you made some
smart-ass remarks and idiotic repartee.

...and that was just last week or so...

>If you cannot afford me the same courtesy I extend to you, please find
>someone else to respond to.

Nobody put a gun to your head and forced you to write a single
thing in this newsgroup. Nor does your amateur radio status
give you droit de seigneur wherein you can denigrate anyone
anywhere and expect some courtesy in return.

DOS Tip: Everybody in a newsgroup is a target. Learn that.

>Are you not capable of defending a position like an adult?

Yes, but why must anyone be defensive against patently
offensive "superior" beings?

I'm adjustable. Act adult and I can respond in kind. Act
childish and I can out-write you three ways from Sunday.
Some neo-militarists like to shoot at others and then
complain about being shot at in return. I return fire when
shot at, even if not the exact target.

If you want to parade around like only You Have All The
Answers and you can Talk Down to others who don't
share your personal viewpoint, TS. You are a Target
waiting to be shot at by anyone. That's newsgroup
Rules of Engagement. Live with it.

You cannot escape the coexistance of the amateur radio service with dozens of other radio services...not in spectrum, not in service to other citizens, not in physical laws involving radio, not in the state of the technological art of radio...and certainly not in federal regulations.

It is one thing to be interested solely in amateur radio history, to collect memorabilia, but it is quite another to discuss policy on regulations which have effects with other radio services. Insularity to the outside world is an insidious malady which can cloud rational thought. A fascination with the past and dedication to nostalgia can draw curtains showing vistas of the future. Insularity to the point of walling off all thought to the rest of the radio world can be considered an irrational act, even terminal in extremes.

The FCC cannot be insular but must consider service to all citizens of the US. The re-posting of the 1958 statements on part of US Citizens Band Radio Service is proof of that. There is some doubt that "political statements" by amateurs, solely for amateurs is effective in changing much policy on changes in radio regulations. The amateur media, chiefly the largest US membership organization, must admit to coloring issues at times.

A case in point is the "Little LEO" controversy of a few years past. To read only the ARRL reportage, one would believe that only the ARRL allies were commenting. As a matter of public record by the FCC the number of Comments from other interested parties outnumbered those of the ARRL and allies by a considerable ratio. When challenged by this, amateurs have a number of rationalizations, chiefly that it is "uninteresting, boring, or not strictly an amateur radio subject." Such rationalizations are insular in the extreme and only serve as internal boosterism that has a negative effect on the opinions of non-amateur radio services.

At WARC 1979 the controversy of Region use of the 40m band by SW broadcasters versus radio amateurs first surfaced. That controversy has been handed-off to future WARCs and WRCs time and time again. Meanwhile, amateurs have continued to complain and wave their own virtual flags of glory as some kind of "service to the community" among themselves. Not to the community, just among themselves. Insularity in action. There is no listed item in the present FCC-State-NTIA agenda for any action on this 40m controversy at any WRC. There could be...but no one seems to want to jump out of their warm cocoon of insularity to promote such an agenda.

Not too long ago the FCC invited Comments on an NPRM to restructure US amateur radio regulations. The response from the PCTAs was predictable...preserve the status quo, keep the morse code test unchanged, preserve the "incentive plan" of class distinction in licenses. Keep things exactly as they were...because that is how the PCTAs achieved their rank, status, and privileges that they hold so dear...largely achievements of their youth which were seldom augmented by further personal achievements in later life. To support their claims of "correct thought" they waved their virtual flags of glory by citing achievements of past amateurs done before they themselves were licensed. Many of those "achievements" have been biased by a few writers and a few organizations until they have achieved an Urban Myth status within the "amateur community."

One of the classics is the amateur Urban Myth is that amateurs "discovered and pioneered" the HF spectrum for worldwide radio communications. In the US that is based largely on Clinton DeSoto's 1935 book highlighting amateur radio. Later historical texts will show that commercial firms were there ahead of amateurs (not by much, to be fair). Not because of some controversy with broadcasters on MF but rather on the basis of radio technology, the state of the radio art of 1920. The Legend persists that amateurs did pioneering and later amateurs insist on grabbing whatever glory existed in the past to justify their own rationalizations of their later "superiority." Smoke dreams. Smoking is bad for the mental heatlth.

What happened in the past concerning amateur radio is just part of a progression to a future activity by amateurs. The past has stepping stones to a future struction. It is not any sort of bedrock to build a strong future upon, just an old foundation to support old materials connected in old ways when all other "buildings" are stronger, larger, and better looking. The past is prologue, not the final act.

The future of everyone begins after reading this. Embrace it, welcome it, rejoice in it, feel the excitement of new things just arrived and yet to come. Or sit back in a cocoon wrapped in virtual bunting of legendary accomplishments by others, do nothing but mumble about how inconsiderate others are about not worshiping the glorious ideals of themselves.

Len,

I don't know about "officially" requiring a license, but I have asked for licenses at hamfests on transceivers and amplifiers. Yes, some of 'em got mad, but, knowing that Riley H. and company were roaming the premises, I wouldn't take the risk of selling to a CBer (found that out because the person{s} told me so).

I DO think that cash or equivilent prizes should be substituted to non-hams at hamfests instead of handing out IC706MKIIGs to the general public. Some of these items are sure to end up being used illegally. Some hamfests do this, others don't---but I wish they would. Could be the source of that "mysterious" kerchunker on 2M is a handheld won by a person without a clue as to the laws governing its use.

Can't afford them right now as handy as they would be for our charity
bike rides that we like to do (got into that through the ham club).
Between them and their 3 brothers, it's tricky just trying to keep them
in bikes plus save up for a an extra pair of 2M rigs and eventually an
HF rig. Luckily they do neighborhood handywork and pay for half of their
own hobby stuff, otherwise I'd never be able to afford it.

You can see them at http://www.tfn.net/~gfloyd7/cmn/

I'll bet every one of those five and six year olds have an IQ in
excess of 120 and you certainly cannot say that for every adult ham.

horseshoestew@my-deja.com wrote:

> Indeed it would be a somewhat segregated area for younger people to get started in ham radio. But that is a big part of what could make this work, as the main idea is to set up a small, less intimidating environment for young beginners, where they can work primarily among their peers, and those willing to help them learn.

Wrong...wrong...wrong...What you need to do is have these "kids" (as you would ANY newcomer) IN THE MAINSTREAM. They don't need to be off in some netherworld of their own.

Part of the problem with the now defunct Novice license was that mmany people didn't want to go up to the Novice subbands. Take a listen there lately? THERE is your "Colt" class license right now.

In Chattanooga we have quite a few under-21 operators, and EVERY person I hear "working" them takes extraordinary steps to be accomodation and helpful. These "kids" are at Field Day, ARES activities, and occassional club meetings. And I CAN'T believe that we are the only club/community that is so disposed to do so.

My suggestion...?!?! If you haven't sent this "proposal" off to the FCC yet, DON'T. They are going to get used to seeing your name attached to frivolous RM's and may, in the future, automatically turn their collective noses up on any subsequent submissions you may make, regardless of how truly beneficial it may be.

Snippage of usual anti-Ham ranting.

The point, Oh Witless One, is that there is NOTHING NEW about any "anti-ARRL" editorials, YOUR rhetoric notwithstanding.

Of course, a HAM made a reference to an past event, and we get the usual "Why are you Hams stuck in the 30's" rant, yet it's OK for YOU to dive in to one of your "There I was with 15KW tube transmitters in 1953..." stories and we are supposed to be grateful for the retelling of the usual LHA-BS.

More Andersonian crap.

You are welcome to your delusions, Vince. I will clarify for those that don't hear that steady whoosh-whoosh of the black helicopter blades that my "retirement" points are set by ARRL employment policy and are not affected by the number of posts I make to rrap. I will clarify that my boss would probably prefer that I not post, but that what I do with my own time is my business (for the time police, I am taking an afternoon coffee break). I will clarify that what I post is my own personal opinion, and although I will not post to undermine ARRL policy, those things that I say are things that I believe. My salary is determined by the nature of the work I do wrt RFI, RF safety, spectrum, engineering studies, and supervising the ARRL Lab. Disagreeing with the doom-and-gloom folks on rrap is not on my annual performance appraisal. And, for the record, I do not go to the weekly office meeting. And last, it is the ARRL Board that sets ARRL policy, not Ed Hare in the ARRL Lab. Perhaps if you read QST more, you would better understand that. :-) Actually, I suggest that you not rely on rrap for your views of ARRL policy. There is a lot more authoratative and complete information about that on many places on the ARRL web page.

> I know you don't agree, but the proposal was a dumbing down proposal.

You are welcome to your opinion, as well, Vince. And I mean that sincerely. I agree that the requirements of going from the 6 classes of license to 4, as ARRL recommended, and the proposal to go from 0-5-5-13-13-20 wpm to

0-5-12-12 did result in a lowering of code speed standards. IMHO, although the ARRL went on record as asking that the written exams be improved so the overall level of accomplishment was the same, that proposal was general enough that I don't think anyone could really say what it meant.

> The losers already have a radio service, why'd the League push to let
them destroy my hobby?

I do not see that the hobby is destroyed. I can still do everything within ham radio that I could do on April 14, 2000. I do not believe that the problems I hear on the air are related to the recent changes in testing and license structure; they existed long before April 14.

In what way has your use of Amateur Radio been diminished?

Aaron, I answered that question with volumes, and continued until I realized that you really would only accept a "yes" or "no" answer for a subject that I believe could foster a very diverse discussion. It was at that point I concluded you were just yanking my chain and I chose to end a discussion I didn't believe you were taking seriously.

From your recent post bragging about yanking my chain, I don't think I was very far off the mark.

Quite the opposite would be true!

That segregation absolutely guarantees that the concept would fail!

The channelized "childrens band" would be held in disdain by mainstream amateurs, the participants would be insulated from mainstream amateur practices and procedures loosing the benefits of exposure to more experienced and skilled operators, and they would be barred from participating the host of activities which would occur outside their cozy little ghetto.

Most telling, however, is the stupendous chasm between your stated concern about the "communications gap" and your incredibly minimilistic proposed technical requirements! Since radio today is all about digital circuitry and RF, I'd expect the tests to emphasize those areas. Instead the theory you'd require is hardly sufficient to design a flashlight! There is no mention of digital principles, and worse yet, a specific prohibition of material on capacitors and inductors (components which are the heart and soul of radio technology)! This dichotomy discredits your stated goals

of "encourage basic knowledge of radio, electronics" and "provide a
path......interested in further radio experimentation".

This whole thing is a non-starter, dead on arrival.

They do neigborhood handywork? Man - now that is really a dying breed.

I remember I used to have a paper route when I was a kid. Nowadays the newspapers are all delivered by adults in cars, because(I assume) there aren't enough kids that are interested in doing it anymore.

As much as I respect your kid's work ethic, the reality is that in today's society, the notion of having to actually work for something has been virtually lost. I'm attempting to return to some kind of "reward for work" ethic that reflects today's reality. The thing is - most kids aren't interested in getting on HF nowadays - because they can just get on the telephone or Internet and communicate more reliably around the world. Also, kids want to be able to communicate with their own peers(who have the same general interests). The idea is to create a critical mass of kids to make the whole thing feasible - provide a big enough carrot, and a small enough hill to climb to get to it. Obviously, we shouldn't just let anyone on who just signs their name on a piece of paper; but requiring all youngsters to have to learn about inductors is a little bit overboard, when all they want to start out with is to learn to communicate a little further than their 500mW fixed-antenna UHF rigs allow them. I want to teach them the right way to get there, and give them enough rewards that they are going to want to learn the right way to get there. This is an entryway to the Service - hopefully many will go on to get their Technician and higher licences.

I think MURS could be somewhat of a help in getting kids educated about radios - but the fastest digital speed possible on MURS will be about 4800bps(in reality 1200bps). This is not enough of an incentive. 19,200bps can be cheaply and easily done on the 1.25m/70cm ham bands, and I think that would be a VERY big incentive.

> You can see them at http://www.tfn.net/~gfloyd7/cmn/

> Were there any pushes back then to get more young people
> interested in Amateur Radio?

>

There was no lack of young people then, I was one. Kids flooded into the hobby. The creation of the Novice license in 1951 was extremely successful in luring kids into ham radio. The availability and readily accesibile dirt-cheap military surplus radios and parts was another huge boosting factor. Any kid could and many did get on HF for well under a hundred bucks in 2001 dollars. Srounging was an artform and part of a perenially-broke kid becoming a ham and a lot of fun in itself.

>

Just about all large high schools had school-supported ham clubs and club stations. The 80 & 40m Novice bands crawled with other kids. A kid could actually understand the circuitry and get a soldering iron into the radios. The VHF & UHF bands were for experimentation for the most part. There were very few antenna and tower restrictions, "real people" didn't live in apartments. If you were a kid interested in electronics the customary gateway to an EE was a ham ticket. Got ya points with admissions officers.

>

Life in general was also very different from today. The overall pace of life was slower and simpler, people had more spare time. Ya didn't mess with girls until you were 16-17. There were no home computers. There were ham stores in every populated area. There was no horde of CBers, no cell phones, no Internet, endless list.

>

It's all changed and I have my doubts about how much "better off " ham radio is today vs. 1958 even though the number of hams then was some small fraction of today's license count.

Yes, you are right, that is definately an oversight. I will correct
that.

> and worse yet, a specific prohibition of material on
> capacitors and inductors (components which are the heart and soul

> of radio technology)!

I believe these areas were also left out of the old Novice exam.

> This whole thing is a non-starter, dead on arrival.

Do you think it was a good idea to get rid of the Novice class?
Shouldn't there have been something done to keep it and update it for
today's world?

Phil, the LA Department of Water and Power is a municipal agency. "Selling" production facilities of the DWP was not, is not, part of any plan by any California Public Utilities Commission...or any other state group.

As of today, Friday, the DWP is selling close to 9 GWatts of electric power outside the DWP part of the local grid. The rest of us in the DWP service area aren't subject to any blackouts or power restrictions.

Weirdness has surfaced politically. The DWP general manager, hand-picked by LA Mayor Richard Riordan, is now being criticized by the Mayor for selling at "nominal" prices rather than raking in all they can get. :-)

I'm not familiar with details of management of SCE, SDGE, or PG&E since those utilities were never in any area I've lived in down here. In general, the management of those private utilities simply failed to handle the deregulation of electric power trading. They seemed to be doing okay prior to electric deregulation. No rolling blackouts then, no "shortage," no state action needed, was there?

All I can see is a 3.8 million subscriber municipal agency not only supplying enough electric power for all its customers but also selling electric power to other power utilities. Seems to me that is a sign that DWP management is able to deal with a situation while the private electric utilities management were not able.

In radio terms the above is called "Proof of Performance."

Perhaps true, but FORTY times increase in KWHR rate in
one year?!?

>> county supervisors got a new manager. The result is
>> enough electric power for this service area plus the
>> capacity to help out other areas in California.
>
>Is DWP exempt from spinning off it's generating capacity?

As a municipal agency, it can't spin off its facilities without
a lot more legal hassle than with a private electricity
provider. Right now the DWP is not only able to supply
electricity to 3.8 million customers but is also selling
nearly 9000 KWe to the outside.

One of the political idiocies going on is the LA Mayor angry
at the DWP general manager for not charging enough on
outside sale (about 6 cents per KWHR, roughly nominal
in current trading charges). It's nonsense. Mayor Riordan
is still involved in a rivalry with the Bay Area, insisting on
"showing no mercy." :-)

>> and other regulations. Burbank = Lockheed used to be an
>> equation. No more. The last Lockheed building has been

>
>Been there, huge complex. Must have moved into the old Martin-Marietta
>complex.

>That's exactly how cities fall into decay like the most of the Northeast Corridor cities have, the smokestackers here all bailed out for the sunbelt to a large extent get away from the unions, outrageous taxes and other expenses.

Lots of former Lockheed employees who stayed here insist that Lockheed got the shaft from the state and from the incorporated city of Burbank, Lockheed's home since 1930 or so. In one way, environmentalists were responsible for Lockheed having had to spend an enormous sum for a water treatement plant at the tin-bending complex off Buena Vista (a half dozen or so large buildings, now all razed). After completion the city wasn't satisfied with test results, wanted much more not stated originally. Coupled with excessive state taxes, Lockheed called it quits for corporate HQ and moved.

>Unstable power availability has to be a hot topic in the Silicon Valley board rooms.

Many places large and small. Today's paper carried a story about a store specializing in black leather clothing...rather hard to display such wares without lighting. :-)

>I have to agree. As Kelley put it it's been an "experiment". A bloody failed experiment. I noticed that yesterday that Davis signed a bill which dropped the generating station spinoff requirement. The state has already dumped $1.4 billion into the fray and this is only the opening gun. Yeah, I expect there will be some steps taken back to a more viable blend of reality vs. deregulation.

...and some elected state politicians are going to face rather severe problems in trying to get re-elected.

All of California's budget surplus just disappeared...got transported to a bunch of overcharging electric power suppliers.

Legalized greed is my term for it.   :-(

> The old method almost required being inducted into the lodge by an
> existing lodge member in good standing.
>

I like that idea. Actually it was a well balanced approach to the situation. I never recall any Elmer putting off a prospective ham unless that person was an outright embarassement. I recall a Black kid and a Mexican kid who got their Novices about the same time. The Mexican kid burned up his radio and lost interest (probably became a professional) and the Black kid went on to General and even cobbled up a completely homebrew CW mobile on his bicycle! Another kid got his Extra and DXCC by his Senior year! But even if you were a complete outcast, you could maybe find someone else to give the test, And in 1973 you could still study and practice on your own and go to the FCC office and take the Extra Class test. I would have preferred the Elmer-Novice was the only entry.

In my case, I knew hams for several years before one asked me why I wasn't one. I had already dabbled with morse code with some of them and had some electronics experience. Actually my major stumbling block was learning the subband allocations. The Novice ticket was extremely easy if you has someone to to work with on it. Several months later I went down to the FCC office 100 miles away and took the Extra Class Exam. I flunked the code test but recieved credit for lower elements and settled for the Advanced. It wasn't till 20 years later that I upgraded to Extra. Now I don't have to sweat the subbands so much.

So why would anyone fight that? I think some people fear being rejected and so do not want to try! It also seems to me that the well meaning ARRL bunch got so hungry for bodies and subscribers that they engineered the changes on the premise that if licensing were extremely simple, then everyone would want to "join the club". The problem is, that if you go dragging the CB bands for converts and giving out licenses, Why would they want to be hams? The difference was in people getting licenses because they were hams as opposed to people getting licenses to find out if they were hams or worse, finding out that since they now have the bands, what are the use of hams.

I submit that if you go looking on Skid Row for employees, you will find a lot of people to go along for awhile, but in the end there will be quite a few that have no good use for it getting in the way of a few gems that could have, but the business failed.

Furthermore, I feel that by short circuiting the Elmer-Novice entry, a great many people have been cheated out of a foundation experience. And if you look hard at the operation of the no-coders, I bet you find that some of them just have useless 10 year licences, and there are not many more than there were when we had 4 year licenses and non-renewable 1 year Novice tickets.

Jim, ac6tk

> hams, or what hams thought or did about this significant event.

>

It wasn't particulary relevant to ham radio much beyond a few hams becoming "Sputnik Chasers" because they knew how to use HF radios and had the equipment. The launch of Sputnik I really caught the aerospace industry with it's rado pants down and hams jumped into the vacuum for the first few days after Sputnik popped up on 15m. Beyond that the space race was pretty much a ho-hum as far as it's impact specifically on ham radio went until hams got into the game with the Oscars much later.

This sounds like a right wing, jackbooted, Nazi attempt to make someone work to obtain a license. We can not allow this to happen!

We should issue a license to anyone who shows an interest.

We need to be sensitive to the desires of today's youth. Are none of you able to fathom the deep loss to a young persons self esteem were they to try and fail for what ever reason.

Only a group of insensitive old hams that want to feel superior because they expended some amount of effort is keeping this from reality.

As of today I am forming NHI (No Hassle International) A group dedicated to remove the artificial barriers keeping young people from what they have a "right" to and deserve.

To fight this fight against the narrow minded ego driven old hams that are holding us down will require substantial funds.

Please send $10, $20, or what ever you can afford to my address as listed on QRZ. You can be sure the money will be put to the best possible use as determined by the Board of Directors of NHI. (Me)

Yours to rid the bands of any incentives

I have no quarrel with private property sales at hamfests. As far as I am concerned there, a seller can ask to see a photo ID such as a driver's license to make sure. If I was accepting checks as payments I would want at least that kind of ID.

How do you feel about having amateur radio police at the door of an HRO branch? Or any other store selling amateur radio equipment? How about over the Internet store sites?

>I DO think that cash or equivilent prizes should be substituted to non-

>lic.

I have no problem with that. Door prizes are door prizes.
Make it a round trip for two to Tahiti and I might attend. :-)

I do have a problem with such suppositions. What makes the "mysterious kerchunker" some kind of "illegal" who isn't FCC-green-carded? How can you tell?

Are the "illegals" always non-amateur? Does a "kerchunk" carry any ID of the kerchunker? :-)

I suppose you didn't take the Novice exam seriously either, eh? The last version(intended to be used up to June, 2001!) contained no mention of inductors, and contained zero questions that involved a correct answer involving a capacitor.

Also, please note that this new "Novice" license does not involve any HF privileges - where the possibility of widespread interference was a possibility.

The thing is, the percentage of hams using HF is way down too. To be
able to reach a critical mass of other people to communicate with on
VHF/UHF, you really need more people.

My kids love the idea of HF...they've talked on sideband on CB at a
friend's house before and thought that was really neat. Maybe one of
these days, you'll hear them down there, but it will probably be on CW
because they are fascinated by the code.

When you don't understand why somebody is doing something which seems senseless to you, sometimes it pays to try to "follow the money".

In this case it led me to a company called "PubCel". According to their web site, that company is involved in:

"Wireless Entertainment and Communications Solutions:

- MURS and ARS Voice and Data Communications Systems

- FRS and GMRS Voice Communication Systems"

I think it is safe to say that the "ARS" acronym might mean "Amateur Radio Service".

Also according to their web site, the company President is none other than Stewart Teaze, N0MHS.

Suddenly this proposal for the "Barbie Doll" Amateur Radio license isn't quite so senseless.

73, Hans, K0HB

Sarcasm noted, Fred.  I'm not trying to produce a giveaway license -
```

but I am trying to forge a modern replacement to the lost Novice Class
license.

Maybe the right idea is to just call this class Novice, and call all
existing Novice Class operators "Novice Plus" - where "Plus" indicates
plus HF, as it does with the similarly closed Technician Plus class.
Novice Pluses would also pick up the extra sliver of privileges on 70cm.

quote:

". The idea was to spur competition, but an unfortunate sequence of events, along with the help of some opportunistic and unscrupulous companys lead us to where we are now. It would have been difficult to foresee this particular outcome."

"Opportunistic and unscrupulous"? Not hardly - just the natural outcome of a VERY flawed bit of political manuevering - BLAMING someone for stooping over to pick up GOLD thrown at their feet is unrealistic - it was ALL very predictable!

As a friend pointed out, the "emergency" will go away as soon as the $$$ start rolling to the "right" people - and those primary power transmissions that were so overloaded as to require rolling blackouts will immediately, overnite, become magically once again able to handle to loads they had formerly been unable to...

Deregulation will continue to be the ffort here in California and other states to follow, and the public will "benefit" from that deregulation of electrical power JUST as we have in the area of fuel for our transportation - you're free to buy it wherever you choose - at THEIR price!

Telling him in an "honest and straightforward" way about his gaff is the
exact opposite of not telling him. That is not my idea of "not much
different."

Sure there are, but in comparing two extremes and saying which I prefer, I felt it best not to drag in too many other factors. I do not think that those who are moderate are a major problem in ham radio.

> You Political Correct mavens insist that your choices are all there is.

Can you explain what you are trying to tell me?

> What would be the matter with some newcomers with an attitude of "I'm
> gonna get this and do it well, make my mistakes and get it right and to
> heck with the minor irritations, whatever they may be. Maybe I can learn
> something about it all from them, if I don't let the chip blow off my
> shoulder".

I do not believe that all of those who make "gaffs," to steal from another poster, have chips on their shoulder. If anything, many of those who "gently remind" people of the words they are permitted to use on repeaters (name is okay, personal is not, handle only if you are an old timer) are the ones seen as having the chips. Would it not be a lot more polite (politically correct if you really do prefer that term) to offer him the advice that some hams will think poorly of him for saying "personal" instead of "name" in a more private setting than in front of everyone on the repeater?

> It must be in the water. NO one today seems to have anything but a

> made it into the teenage years, much less far beyond.

If you are saying that no one of your generation would be offended by being publically humiliated for making a minor poor choice of words, I think you are looking at the past through some very thick lenses. Maybe you had no concern for what people think of you, but human nature has not changed that much over the decades. Many people are by nature, insecure. I don't think it inappropriate to consider that when offering "gentle advice."

Actually, Aaron, it is not that human nature is even always "what it is." It
is that if you participate in an open forum, there are always one or two who
feel that the best thing that they could do for you is to publically  and
soundly berate you for any mistake you might make.  It toughens the soul,
you see?  It will either make you, or make you go away. Either way, they
believe that Amateur Radio benefits because it ensures we will end up with a
"few good hams."

If you think their behaviour is inappropriate, it is only because you are
too "politically correct" or never put down your love beads. :-)

What part of "could be" did you not understand. I have no problem with
suppositions that are identified as such. His was.

> Are the "illegals" always non-amateur? Does a "kerchunk"
> carry any ID of the kerchunker? :-)

The one doing the kerchunking is indeed always illegal. Transmitter
fingerprinting has been used to successfully ID several kerchunkers over the
years.

There is no calamity. Governments all over America were just examining
all the piles of money from overtaxed citizens and wondering what to do
with it all. You couldn't lose in the stock market. Greenspan had to
keep tightening the money supply to slow down an over-robust economy.

Then GW won the election and the mainstream press mantra is "We're back
in the Worst Economy Ever" mode, with an energy crisis on top of it.

The guys in the Revolutionary War, and World Wars I and II did. So if I was in the military, I guess I would have to also.

> (I consider myself to be an "environmentalist" also),

I meant to write eco-terrorists. You aren't one of them too, are you?

> the people you
> mention above are just amoral, self-serving criminals.

Right. So as long as it's a group you happen to agree with, it's constitutional for them to start an armed rebellion. That's what I thought.

You may be right that most who learn the code will actually possess equipment to use it, if they stay active as hams, but I know many a code-tested ham who has no equipment at all, as well as a few who literally had the code-key burying cermony in their back yards, surrounded by all their friends. I also know a larger number of hams who passed a 13 wpm test, but would have difficulty getting past 5 wpm today.

Your mileage may vary.

The ARRL's proposal to the FCC was for 4 license classes, 0, 5, 12 and 12 wpm, and that the level of the written exams be increased to make up for the changes in code testing. Not exactly the most "extremely simple" structure I could think of.

If you want extremely simple, go back to 1963, when I studied 4 pages of study guide to become a Novice, then to 1964 when I studied 16 pages of study guide to become a General. Nowadays, we hand prospective hams a study guide that is over 200 pages and tell them that this is what they need to know to be a beginner. I don't know about the current edition, but in the previous Now You're Talking, the question pools took up about 70 pages. Four pages vs sixteen pages vs over 200 pages. Which are you calling "extremely simple" again?

> The problem is, that if you go dragging the CB bands for converts and
giving out

No one is giving out licenses; those wishing to be hams are studying hundreds of pages of study guide and passing tests.

> The difference was in people getting licenses because they were hams as
opposed to
> people getting licenses to find out if they were hams or worse, finding
out that since

Are you really saying that people are studing hundreds of pages of material just to find out if they are hams?

I agree; the lack of Elmering cost us a lot of hams. So did an "Elmering" process by which some hams made newcomers feel like they were seen as having come from "skid row..." I don't know which had the larger effect.

Ed,

I hope, IF the test is an issue, that some ARRLer with a testing and measurements background (more current than mine) would, indeed, offer to assist with the development and validation of the test pool. If not, so be it.

Frankly, the only problems that I have with the General pool (which I'm working on right now) are the numbers that I have to (MUST) memorize. There's just some background knowledge not in the study guides that a non-techie like me doesn't have and doesn't know where to find the answer, other than memorization. For example, one of my Monday night buddies showed me how to figure out the band from the frequency. I've looked for that in my study material and just can't find it. There are lists to memorize, but an explanation?

Thanks for your participation in all of these threads. I'm getting too old to have fun with the trollers, though <grin>.

Edison has said that their energy costs have increased 100 times over
what they were last year.  Obviously the need for regulation still
exists.  There still exists a monopoly in the power generating business
out here.

What for? The present Technician grants "tons" of priviledges over what you are proposing, and if the licensee passes the 5WPM, the FCC has already said it's OK to add the "plus" part as long as you keep the CSCE in your possession.

Noble effort, Don Quixote.

MURS will no more "educate" kids about radio than chatting in a
porn chat room "educates" you about computer technology.

You turn on the box, select a channel and talk.

Every year, I have generally offered some input to the ARRL HQ folks who work with Bart Jahnke, the ARRL representative on the QPC. Unfortunately, I have only limited time to spend on that. I sure wish that more people would weigh in and give the QPC their input on what changes are needed on the pools.

I went to the ARRL General Class manual, and lo and behold, there was no info about wavelenght.

So, let me give it a whirl.

Electromagnetic or radio waves can be visualized just as waves in water. If you put your hand in the water and move it very fast, small ripples will move from your hand, away in all directions. If you move your hand more slowly, the ripples move just as fast, but are spaced farther apart. The distance between the peaks (or valleys) of the ripples is the "wavelength" of the waves you are creating, and this wavelength is related to the speed the wave is traveling and how fast you are wiggling your hand. The wiggle rate could be expressed in "wiggles per second," thus expressing it as a frequency.

The "hand" being used to generate ripples in electromagnetic waves is usually a transmitter. The the transmitter is generating an electrical AC signal, at a fast enough rate to be called "radio frequency" (RF). Rather than expressing it as "wiggles per second," the transmitter rate is expressed in "cycles per second." The unit for cycles per second is Hertz, abbreviated "Hz." This RF signal, when applied to an antenna creates an electrmagnetic wave. To round off just a bit, the wavelength is related to the speed of the wave and the frequency by the formula:

wavelength in meters = 300,000,000 meters per second / F where F is the frequency in Hz

This is a bit cumbersome. An easy way to calculate the wavelength in meters is to use the formula:

wavelength in meters = 300 / F where F is the frequency in MHz (the M comes from the metric system, for Mega or 1,000,000 times the basic unit).

So, to try this for a few frequencies in the ham bands, you end up with:

3.5 MHz = 85.7 meters
4.0 MHz = 75 meters
7.0 MHz = 42.9 meters
10.1 MHz = 29. 7 meters
14.0 MHz = 21.4 meters
144 MHz = 2.1 meters

The "frequency" of a particular signal can be expressed either as a frequency, as in 14.0 MHz or as a wavelength. Either one says the same thing. You probably notice that the wavelength numbers are pretty close to what hams call 80 meter band, the 75 meter band, the 40 meter band, the 30 meter band, the 20 meter band and the 2 meter band. Although the exact wavelength for the 3.5 MHz signal is 85.7 meters, hams have rounded these bands off to a convenient number and use those rounded numbers in common reference to the bands.

Memorizing the bands works just fine; in fact, most hams, even Extras, really don't think much about the relationship between frequency and wavelength in common speech. You will soon refer to the 80 meter band with complete ease as you think about frequencies; it becomes second nature. You will think of that wavelength relationship when you think about antenna size -- a half-wave dipole (neglecting factors that make a "real" dipole a little bit shorter than its electrical length) is, well, a half-wavelength long. So an 80-meter band half-wave dipole is about 40 meters long.

But if you would rather figure out the answer when you take your test instead of memorizing it, memorize the following two formulas (or just the first one and apply a bit of simple algebra and solve for the unknown):

wavlength in meters = 300 / F

F = wavelength in meters / 300

Is that easier than all that memorizing? :-) I hope my few paragraphs helped you understand it. Don't worry, when I took my 1964 General exam, I memorized the formula without understanding it. You are one step ahead of where I was when I first started. :-)

If you have any more questions about the theory, go ahead and email me at
home, w1rfi@aol.com. I only check my home email every few days, but I will
try to point you in the right direction, if I can.

Good luck on your General.

73,
Ed Hare, W1RFI

I've never tried to hide the fact that I'm trying to create a business. Quite the opposite - why would I list the web site on the signature to all my posts, if I was trying to hide something

Hey, Hans, I wonder why you switched your approach to this slimly veiled "personal attack"? It couldn't be that I was right about the point regarding inductors and capacitors on the Novice test, could it?

Let's stick to the point at hand. You made a good point about the lack of digital modes in the proposal - THIS is the kind of stuff I'm looking for.

Not true.  MURS allows external antennas and digital modes.  These are
big differences over simple FRS.

If ARS is to "compete" with MURS, we are going to have to come up with
something new.

Some of us have more experience in that than others, I guess. :-)

Those who use the MURS radios will learn something in the process. First, the radio has a range. They will learn that buildings and obstructions limit that range. They will learn that the range is farther if you are at the top of the building than if you are in a valley.

I think a better analogy that the porn chat room (where did you dig that one up) would be to ask what education has been the result of giving kids internet access in general? As a big kid, I can't begin to describe how much I learned that way.

>   You turn on the box, select a channel and talk.

That is indeed most of the picture. Now, can we use the good and bad of MURS to find the subset of those kids that don't yet know they would like to be hams?

I wonder if it would be possible to get the text of the arguments made
for the successful creation of this license class back in 1951. Even
though they would be 50 years old, I am sure there would be some
relevant ideas.

This stuff must be archived in Washington, DC, somewhere. I would
think it would have been put on microfilm a long time ago. Does the
FCC have a library for this kind of thing?

Digital modes aren't boring. Having a computer make your carrier hop around just for the heck of it seems kinda dull though. I guess it would be fun the first time you actually got the thing to work though.

> It appears I misunderstood. Sorry.

Good man.

Stewart,

The idea has already been tried. Back about 15 or 20 years the Dutch instituted a license class for beginners. It consisted of about 5 frequencies in the two meter band. Licenses required only a simple test. No code. It was hoped that these Novices would upgrade and become regular licensees. As for as I know none ever did. The service still exists, I believe.

If you want to have youngsters or oldsters learn about radio the best way is the old Novice license. % wpm code, a simple theory test, and a one or two year limit within which they HAVE to upgrade!

Top ten signs you're in a Hiram, GA hospital

10. You go in for routine surgery, you come out with a tail.
9. You recognize your doctor as kid who was mopping the lobby when you checked in.
8. Instead of sponge bath, they send in a St. Bernard to lick you.
7. As you're going under, your surgeon says, "man, am I baked."
6. In operating room, you see Roger Wisemann scrubbing up.
5. Every couple of minutes you hear a bugle playing taps.
4. All the diplomas on the wall are signed by Sally Struthers.
3. You and your roommate have to take turns on the I.V.
2. Through fog of anesthesia, you hear surgeon shouting, "bring the damn scotch tape!"
1. Instead of "patient" they use the term "plaintiff."

  It is well established law that a governmental agency that is
  engaged in a commercial activity that is equal to or in direct
  competition with similar private sector enterprises does not
  automatically enjoy "exempt" status that governmetal agencies
  otherwise enjoy.  The Legislature or the CPUC has to grant that
  status, usually by the use of the term "investor-owned utilities"
  in either the statutes or CPUC Orders.

"Selling" production facilities of the DWP was not,
>is not, part of any plan by any California Public Utilities
>Commission...or any other state group.

  That's what I said.....
```

>As of today, Friday, the DWP is selling close to 9 GWatts

9 GW is 9000 MW....equal to NINE units of nuclear power
plant generation (1 "unit" is 1000 MW). Five plants the size
of Diablo Canyon. Hard to believe. Where are they hiding them?

CHAPTER 2

The Novice License

The Novice Class license offers an ideal way to get started in amateur radio -- reduced code speed and a simplified written examination. It grants a portion of amateur privileges on an "apprenticeship" basis for one year. The examination is available only by mail. This chapter explains the license in detail and contains sample questions for the written exam.

In an incentive to encourage a greater number of people to engage in the hobby of amateur radio, the Federal Communications Commission has established a Novice Class of license with greatly reduced requirements and only a few of the privileges available to amateurs. This class of license might well he termed an apprenticeship. It has a term of but one year, compared with the five-yea terms of other amateur licenses, and the objective is to give a newcomer a period of a year of actual on-the-air experience or training in amateur operation so that he may develop his skills toward one of the permanent classes of license more rapidly than he would by textbook study and audio-oscillator code practice.

The Novice Class license examination may now be taken only by mail, under the direct supervision of an amateur holding a General Class license or higher, or a commercial radiotelegraph license. This is true no matter where the applicant lives. Refer to the section "Examination Procedures " in Chapter 5 for details on the rules governing the routine for making application and obtaining a set of examination papers. Requirements for the Novice license are the passing of a code test in sending and receiving at the rate of 5 words per minute, and a written examination in the most elementary aspects of amateur regulations and theory.

The privileges which are currently available to the Novice licensee are:

3700 3750 kc. - telegraphy
7150-7200 kc. - telegraphy
21,100-21,250 kc. - telegraphy
145-147 MC. --telegraphy or voice

In addition, the transmitter used by a Novice licensee must be crystal-controlled, and may not have an input exceeding 75 watts. Of course, the Novice may operate portable or mobile on any of these frequencies. (SeeChapter 7).

The most important point concerning the Novice license is that it is valid for only one year and may not be renewed. Before the end of his license term the Novice must qualify for one of the other grades of amateur licenses, or go off the air. He may try for a Technician Class or a General Class license (or Conditional Class, if eligible to take the mail examination). Whatever his choice, he must qualify for all requirements of the particular license class inasmuch as the Novice Class license, being obtained by mail, carries no credit toward a higher grade of license even where the examination elements are identical (such as the Technician 5 w.p.m. code test). He may not try for a class higher than those mentioned, of course, since experience as a Novice operator does not qualify for the service requirements for the Extra Class license.

Anyone who is a citizen of the United States may apply for the Novice, license, except a person who holds or ever has held an amateur license of any class. Thus a Novice not only is unable to renew his license at the end of his term, but he may not again apply for Novice privileges. If an applicant for Novice privileges feels that he can pass the standard written examination for amateur licenses but is unable to meet the 13 w.p.m. code requirement, he may simultaneously apply also for the Technician Class of license, taking the 5 w.p.m. code test, the elementary Novice written exam, and the standard written exam.

A Novice may operate any FCC-licensed amateur radio station, but only to the extent of the privileges available to the Novice and similarly available to the licensee of the station being operated. For example, when a Novice visits a station licensed to a General Class amateur, he may operate in only the Novice bands, using crystal control and with 75 watts input power or less. He uses his host's call sign exactly as issued, however. When a Novice operates a Technician's station, he may use only the 145-147 Mc band, since that is the only band common to both Novices and Technicians.

As stated, the written examination for the Novice license is quite simple. It consists of about 20 questions dealing with basic amateur regulations, and certain points of theory and technique. The questions are of the "multiple-choice" type, as explained in Chapter 1. There are no diagrams required. Following is a set of questions similar to those which are asked in the examination. If you are thoroughly able to answer each of these sample questions, you will have no difficulty in passing the written exam. However, in any event we recommend additional study of at least the technical material in How to Become a Radio Amateur and preferably of the introductory chapters of The Radio Amateur's Handbook ($3.50), both available postpaid from the ARRL, West Hartford 7, Conn.

The receiving code test for the Novice Class license consists of 25 five-letter words, mostly common ones. No punctuation marks or numerals are included. To pass, the applicant must copy at least 25 consecutive letters accurately. In the sending test, numerals and simple punctuation marks may be included.

QUESTIONS:

1. What is the maximum input power permitted to the final stage of the transmitter in a station licensed to the holder of a Novice Class license or operated by such an operator?

The maximum input power permitted a Novice is 75 watts.

2. What is the maximum penalty for a violation of the rules and regulations of the Federal Communications Commission?

A fine of up to $500 for each day during which the offense occurs, suspension of operator license, and revocation of station license.

3. On what frequency bands may the holder of a Novice Class license operate an amateur radio station?

3700-3750 kc.
7150-7200 kc.
21,100-21,250 kc.
145-147 MC.

4. On what frequency bands may the holder of a Novice Class license operate an amateur radiotelephone station?

5. What is the log of an amateur station, and what information is required to be entered therein? How long must it be preserved ?

The log of an amateur station is the written record of transmissions. The log must show:
1) the date and time of transmission
2) the signature of each licensed operator operating the equipment and the name of any person not holding a license who speaks over a radiotelephone transmitter directly or by recording, or operates a teleprinter keyboard
3) call of the station called
4) the input power to the transmitter
5) the frequency band used
6) the type of emission used
7) the location of the station at the time of transmission
8) the message traffic handled

Information such as the input power, frequency band, type of emission, location of station, need be entered only once provided the conditions are not changed. Similarly, one entry of the date need not be repeated for other transmissions made on that date. If the station is mobile, the approximate geographic location can be indicated in the log.

The log of an amateur station must be preserved for at least one year following the last date of entry. Similarly, any message traffic handled must be kept on file for at least one year.

6. What is the term of an amateur Novice Class license? Under what conditions may this license be renewed?

The term of an amateur Novice Class license is one year. It may not be renewed under any conditions.

7. What are the rules and regulations regarding the transmission of improper language, false signals, or malicious interference?

The transmission of obscene, indecent or profane language, or of false or deceptive signals or call letters, or of malicious interference is expressly prohibited and there are heavy penalties for violation.

8. What are the rules and regulations regarding purity and stability of emissions?

Below 144 megacycles, spurious radiations must be reduced in accordance with good engineering practice, and must not cause interference to nearby receivers of good engineering design not tuned to the transmitter. Voice modulation of a transmitter must not cause spurious emissions; the maximum modulation percentage is 100%. Simultaneous frequency modulation and amplitude modulation is not permitted. The frequency of the signal transmitted must be as constant as the state of the art permits.

9. What method of frequency control is required to be used in the transmitter of a station licensed to the holder of a Novice Class license?

The frequency must be crystal-controlled.

10. What are the rules and regulations regarding the measurement of the frequencies of the emissions of an amateur radio station?

Regular measurement of the frequency of the transmitter is required. This measurement must be by means independent of the means used to control the transmitting frequency and must be of sufficient accuracy to ensure operation within the frequency band used.

11. Who may be permitted to operate the transmitter of an amateur radio station licensed to the holder of a Novice Class license?

Any amateur radio operator (though a Technician may operate a Novice's station only in the band 145-147 Mc., since that is the only band the two classes have in common).

12. Under what circumstances may an amateur radio station be used by a person who does not hold a valid license?

A person not properly licensed may not operate an amateur station. However, he may speak over the microphone of an amateur radiotelephone station or use the keyboard of an amateur radio-teleprinter, provided a duly licensed operator is present to control the emissions.

13. What is the maximum permissible percentage of modulation of an amateur radiotelephone station?

One hundred per cent.

14. At what intervals must an amateur station be identified by the transmission of its call sign? May any transmission be made without identification of the station?

An amateur station must identify its call sign at the beginning and end of each transmission and at least every ten minutes if a single transmission lasts longer than ten minutes. No transmission by itself may be made without identification of the station, except that during a sequence of transmissions each less than three minutes long, the call sign needs to be given only once each ten minutes as well as at the beginning and end of the work.

15. Under what conditions is notice of portable or mobile operation required to be given, and to whom in each case?

Notice of intended portable operation, or mobile operation, must be given the FCC Engineer-in-Charge of the inspection district in which such portable or mobile operation is contemplated only when the operation is or is expected to be for a period longer than 48 hours.

16. What are the recognized abbreviations for: kilocycles, megacycles, Eastern Standard Time, Greenwich Mean Time, continuous wave, frequency modulation, amplitude modulation?

kilocycles - kc.
megacycles - MC.
Eastern Standard Time - EST
Greenwich Mean Time - GMT
continuous wave - C.W.
frequency modulation - f.m.
amplitude modulation - a.m.

17. What is the relationship between a fundamental frequency and its second harmonic; its third harmonic, etc.?

The second harmonic is twice the frequency of the fundamental, the third harmonic is three times the fundamental frequency, and so on. A harmonic is always related to its fundamental frequency by an integral multiplier; i.e., 2, 3, 4, 5, 6, etc.

18. What is the relationship between a cycle, a kilocycle, and a megacycle?

1 kilocycle = 1000 cycles
1 megacycle = 1000 kilocycles = 1,000,000 cycles

19. What instrument is used to measure: electrical potential; electrical current; electrical power; electrical energy?

Electrical potential is measured by a voltmeter.
Electrical current is measured by an ammeter, milliammeter, or microammeter.
Electrical power is measured by a wattmeter.
Electrical energy is measured by a watt-hour meter.

20. What is the purpose of: a modulator; an amplifier; a rectifier; a filter?

A modulator is used to vary the amplitude, frequency or phase of the output of a transmitter for the purpose of transmitting information. An amplifier is used to increase the amplitude, or power level, of a signal. A rectifier is used to change alternating current into pulsating direct, current. The purpose of a filter is to attenuate undesired frequencies while simultaneously passing, without appreciable attenuation, a desired band of frequencies and/or direct current. Examples: The power-supply "smoothing filter," which eliminates the alternating-current ripple from the output of a rectifier but permits direct current to flow with little or no attenuation; the "low-pass" filter, which attenuates all frequencies (such as harmonics of a transmitter) above a given frequency but passes all lower frequencies.

21. What is meant by: amplification; modulation; detection; attenuation?

Amplification is the process of increasing the amplitude, or power level, of a signal. Modulation is the process of varying the amplitude, frequency or phase of the radio-frequency output of a transmitter. Modulation is normally employed for the purpose of transmitting information. However, it may also occur inadvertently, as in the case of "hum" modulation of a signal resulting from ripple in the output of an insufficiently-filtered d.c. power supply. Detection or demodulation is the process of extracting the information contained in the modulation on a radio-frequency signal. Attenuation is a reduction in amplitude.

22. What is the purpose of: a radio-frequency choke; an audio-frequency choke; a filter choke?

The purpose of a radio-frequency choke is to oppose the flow of radio-frequency current while permitting direct current and audio frequencies to flow without appreciable opposition. The purpose of an audio-frequency choke is to oppose the flow of audio-frequency currents while permitting direct current to flow. The purpose of a filter choke is to aid in smoothing the direct-current output of a rectifier.

23. How is the actual power input to the tube or tubes supplying energy to the antenna of an amateur transmitter determined?

The input power is determined by measuring the direct-current plate voltage and the d.c. plate current to the tube or tubes in the final stage in the transmitter. The power input is equal to the plate voltage multiplied by the plate current in amperes. Example: Two tubes in the final stage of the transmitter take 50 milliamperes each, at a plate voltage of 500 volts. The total plate current is 2 X 50 = 100 milliamperes, or 0.1 ampere. The power input is therefore 500 X 0.1 = 50 watts.

24. Why are a rectifier and filter required in the plate power supply system of an amateur transmitter when operated from alternating current?

The amateur regulations require that an adequately-filtered plate supply be used on transmitters operating below 144 Mc. The rectifier is used to convert the alternating current into direct current. However, its d.c. output is pulsating, not constant, and the filter must be used to smooth out the pulsations so that the output is essentially "pure" -- that is free from pulsations or "ripple."

25. What is a frequency multiplier?

A frequency multiplier is a device that delivers output at an integral multiple (i.e., 2, 3, 4 times, etc.) of the applied frequency. The output of a frequency multiplier is consequently on a frequency that is a harmonic of the fundamental (applied) frequency.

26. What are the undesirable effects of overmodulation in radiotelephony?

Overmodulation results in the generation of spurious sidebands - that is, frequencies lying outside the band of frequencies or "channel" actually required for transmitting the information contained in the modulation. Those spurious frequencies, called "splatter," will interfere with communication on near-by channels and may even lie outside an amateur band. At close range they may also cause interference with broadcast reception.

27. What is meant by a "parasitic" oscillation?

A parasitic oscillation is one not essential to the operation of the equipment and usually occurring on a frequency considerably removed from the operating frequency.

28. What is the purpose of a "key-click filter" and when should it be used?

The purpose of a key-click filter is to reduce spurious radiation generally when keying a radiotelegraph transmitter. It should be used whenever required for suppressing such spurious radiations.

29. What is Ohm's Law?

Ohm's Law expresses the relationship between potential, current and resistance in any circuit.

It is stated as I = E / R where I = current in amperes, E = potential in volts and R = resistance in ohms. By simple algebra it is also E = I * R and R = E / I.

30. What precautions should be taken to avoid the danger of shock from high-voltage electrical circuits?

Such circuits in transmitters and receivers should not be exposed where the operator can inadvertently come in contact with them when the power is turned on. All work on equipment involving the possibility of contact with such circuits should be done only after the power has been turned off. All power-supply capacitors should have bleeder resistors connected across them, to discharge the capacitors after the power has been turned off.

31. What is the relationship between the frequency and the wavelength of a radio wave if its velocity in space is 300,000,000 meters per second?

The frequency in cycles multiplied by the wavelength in meters is 300,000,000. Therefore, the wavelength is inversely proportional to the frequency; in other words, the longer the wavelength, the lower the frequency. The formula for calculating frequency (f) in cycles when the wavelength in meters is known is f = 3,000,000 / wavelength ; similarly, wavelength = 3,000,000 / f. Example: The wavelength of a signal whose frequency is 3700 kilocycles is 300,000,000 / 3,700,000 or 81.08 meters.

32. What symbol is used in the amateur rules to designate amplitude-modulated telegraphy without the use of modulating audio frequencies (on-off keying)?

Al. (The "A" indicates amplitude modulation, and the numeral "1" is used to indicate telegraphy by on-off keying).

33. What is the ruling regarding eligibility for reexamination?

An applicant who fails an operator examination may not take another examination for the same or higher privileges within 30 days (except that this does not apply to an examination for a General Class license following a mail examination for a Conditional, Novice or Technician Class license).

34. What factors are commonly responsible for harmonic radiation and what practical means can be used to detect and correct such condition?

The principal factors responsible for harmonic radiation are (1) improper operating conditions in the final amplifier, such as excessive grid bias and excessive drive, causing the tube or tubes to develop unnecessarily large harmonic output: (2) poor selectivity interstage tank circuits, resulting in excessive harmonic content in the excitation voltage applied to the final stage (3) inadequate selectivity in the final tank circuit because of too-low operating Q; and (4) insufficient selectivity in the coupling circuit between the final-amplifier tank circuit and the antenna, or omission of such a coupling circuit.

These defects can be corrected by (1) reducing grid bias and drive to the minimum necessary for reasonably efficient operation of the final tube or tubes; (2) using higher-Q interstage circuits, usually by increasing the ratio of capacitance to inductance or by decreasing the coupling to lighten the loading on the circuit; (3) adjusting the final tank inductance so that the tuning capacitor will be set for higher capacitance at the operating frequency: and (4) installing a tuned antenna-coupling or matching circuit between the transmitter and the transmission line or antenna.

The presence of harmonics in the output of a transmitter can be detected by the use of an absorption wavemeter, having a sensitive indicator, coupled to the final tank circuit or to the antenna coupling circuit, and successively tuned through the harmonics of the operating frequency. Alternatively, tests can be conducted with a nearby amateur station, with the cooperating amateur listening on the various harmonic frequencies while the transmitter is in operation. The receiving station

should not be so close that the fundamental-frequency signal strength
will be such as to overload the receiver and thus cause spurious
harmonic responses in the receiver itself.

The only way it might help is if they have an Elmer type to explain what is actually happening when they talk. From that standpoint, CB would be better because at least they can practice antenna and electronics theory (especially if they get busted radios donated for practice demolition er I mean repair), and there's at least a little bit of propagation that might get their attention and give them something more to learn about.

At the same time, having adult supervision would be even more necessary in case "emergency censorship" of the ongoing conversations become necessary.

I'm not familiar with MURS and wasn't aware of the extra room to play. I
would still be concerned about the cost of equipment though.

Doncha just love it when some "genius" badmouths the (learned) opposition, and then uses "dribble" for drivel...in the same sentence?

Top ten signs your phone company is in Glendale, WV

10. All calls are $2 for the first minute, $94 each additional minute
9. Operator makes you describe what you're wearing
8. Their so-called "dial tone" is just a guy with a kazoo
7. You can only place long distance calls during an electrical storm
6. They bill you for calls made by some guy named Roger, and when you complain they say, "whatsa problem, man, you no like Roger?"
5. Whenever you call their office, you hear gunfire
4. For some reason, your phone doesn't work unless you're wearing

3-D glasses

3. Everyone you talk to sounds like the guy at the drive-thru window at McDonald's
2. No matter what number you dial, you always get Roger Wiseman
1. Their slogan is: "Reach out and touch yourself"

Top ten problems being a Glendale, WV ham

10. Phone sex operators keep hanging up on you
9. FOX is starting a new show about you: "America's Least Wanted"
8. You get a heart-shaped box filled with angry hornets
7. The babes just don't seem to go for your home-made Star Trek uniform
6. You're taking private tutorials with Jocelyn Elders
5. You're being stalked by Riley Hollingsworth.
4. The last time you got laid was during the Eisenhower administration
3. You spend your vacation chasin' lizards
2. The Pope asks you for tips on celibacy
1. You ain't a Gingrich, but your nickname's "Newt"

Top ten signs you've visited a Hiram, GA chiropractor

10. When you walk, you make a wacky accordion sound.
9. Keeps saying, "A spine is like a box of chocolates."
8. Repeatedly asks, "You a cop? You sure you ain't no cop?"
7. Over and over, you hear crunching sounds followed by "Uh-oh."
6. There's a two-drink minimum.
5. At end of session, lies down on the table and says, "My turn!"
4. He was trained by Roger Wiseman.
3. Rushes in late to your appointment, still wearing his Burger King uniform.
2. Hints that for an extra $50, he'll "straighten" something else.
1. You're fully-clothed and he's naked.

Everybody is holding their breath until the Motorola objection to FCC's
creation of MURS is settled.  If that gets settled positively
(Motorola's objection is set aside), then I expect many manufacters to
begin making MURS radios.  Prices will drop, accordingly.  I expect
that within a year we will see decent MURS radios in the $70-$100
range.  Right now the only thing specifically available are offerings
from Radio Shack in the $125 range, or the 1W Motorola Spirit single
channel(9 selectable)VHF business radios(don't get the two watt
version, it is not useful for MURS, as the only two MURS specific
channels it supports use a 25Khz bandwidth, MURS will be using 12.5).

Didn't say that. Go back and read. Again - I said the percentage of hams using HF is down. I would guess that the number using HF has remained fairly constant. As you know, those that are using VHF/UHF communicate over shorter distances - it is these people who I am talking about. Every year they become a greater and greater percentage of the ham population. The problem is that less and less of all hams are ACTUALLY using VHF/UHF.

I originally posted to rec.radio.cb to support my argument that CB is
obviously NOT the proper environment to be starting our kids off in
radio - and you folks did not disappoint me, as the typical vulgarity
of your posts show.

Look, I don't have anything against you folks - I just don't think it
is appropriate for kids to be learning radio on the 11 meter band.

It carries the "fingerprint" of the tranmitter....the FCC has used such IDs very successfully in enforcment even when I was on board.

For once a constructive suggestion!  My 11 year old has asked me several
times if I can find a ham radio technician text that is geared for young
people.  So far I haven't found anything.  Anybody for getting something
like this together?  It doesn't need to talk down to the kids.  Kids are
bright and intelligent and can understand amazing things.  But it HAS to be
made interesting to THEM.  If you could disguise it in a Nintendo game it
would work even better.  If it were available for download for a free or
minimal cost so much the better.  Now THAT would be a contribution!

Dunno how "cool" it is but it was a poke at demonstrating why us Old Farts
come from fundamentally different "cultural" directions than do many of the
much younger hams of today. I mean like the whole point to RRAP is that it's
the current really whizzy outlet of convenience for the usual generational
warfare which probably goes back to when the first Species Homo Sapiens kid
told his father he wasn't gonna sleep up in the freaking family tree any
longer.
>

```

I guess so considering the big volume of hams today which don't have HF
privs which was not the case in earlier days. .
>
Fact is that there isn't any way to put the calipers on HF activity and band
utilization. If I had the time I could spend all day every day on HF and
barely even scratch the surface. Over the past half century four MF/MF ham
bands have come into broad use thus there is something of a dilution effect,
basically a 55% percent increase in the size of the playground. We got the
three WARC bands in '79 which accounts for three new bands plus 160 has
returned from the deep dark "200 Meters and Down" days into a very current
hot button.
>

> able to reach a critical mass of other people to communicate with on
> VHF/UHF, you really need more people.

What the heck is a "critical mass" in this context?
>
I won't comment on that one beyond the fact that VHF/UHF ops are not the
reason I've kept renewing my ticket.

You betchum. There was a huge outcry from the Old Farts of my youth about
the FCC and the ARRL having the unthinkable audacity to even suggest
letting pimply 5wpm weenies like me get on the HF ham bands until we did
13wpm solid copy with a pencil. In front of an FCC exaniner of course.

No. Regulatory agencies are not keepers of history. It's all in the ARRL
collection of QSTs now archived in CDs going to the 1915 issue one, volume
one, in particular cruise the Letters to The Editor columns for the
earlier iterations of rrap. Heh.

I don't remember any policy. I was a teenage ham at the time. I remember listening to Sputnik on my old receiver and thinking it was pretty neat...

>Were there any pushes back then to get more young people
>interested in Amateur Radio?

That was not a problem then. One old magazine I have estimates that about 50% of the new hams in the late 50's were teenagers...

I am not trying to escape the totality of radio. My posts here are mostly are about *amateur radio* because this is an *amateur radio news group* and because *amateur radio* is my hobby interest. If I wanted to hear about broadcast radio, CB radio, SWLing or other radio subjects I would specifically visit those particular groups...

But...goodness knows we do stray from the subject, so feel free to post on the totality of radio. I certainly have no objections. Just don't expect all of us to do so... :-)

I was referring to my first line above:
"In society most people are too polite to tell
 someone about his gaff."

You were too polite to tell a CW contact that he had a poor fist. You
were so polite that you would rather lie about having to QRT to go
dinner than tell him about his bad fist. That's not much different
from being too polite to tell someone about his gaff... :-)

Len insists on his "rights" Aaron. He feels free--nay, he insists on his "right" to post his usually lengthy diatribes in an amateur radio group. He isn't a ham but seems to think that radio amateurs are under some sort of obligation to pay credence to his views. You'd think that if the guy was really interested in amateur radio, he'd have managed to obtain a license by now.

You'd think he might have figured out by now that most of the folks reading and posting here are really interested in amateur radio.

Well, it depends on how ingrained they became.I still remember 10-18
though I haven't used it in 15 years. It meant "what is your location?".

 I have an APCO "National Police Communications Network Directory and
Reference Guide" from 1945, and one from 1951. It's amazing how much
changed in that six year period.

Why don't they make some effort to do more with geothermal energy? Ca.
is loaded with the stuff and there's no natural gas bills involved. Too
simple a solution?

I know there is some geothermal installations in northern CA but looks
like it would be -or would have been- an easy out for them all along...
Guess that's too much to ask from politics, 'specially on the Left
Coast. No "vested interests" in geothermal as in oil and gas.

>and therefore no equivelant to the National Defense Education Act will
>be forthcoming anytime soon.

I don't understand this "communications gap" that is supposed to be developing. What has been going on is rather intense competition for commercial communications all over the world. For a long while Asia has been leading that area due to low production costs. Now north Europe is cutting into that market. A cross-country drive across 2/3 of the USA will demonstrate that, via all the antenna poles and towers that weren't there two decades ago, the USA has been adding communications facilities aplenty. I don't recall seeing any foreigners coming into the USA to install all that equipment.

If one can get the gist of this alleged "communications gap," it does not impact amateur radio. All of that commercial communications infrastructure was put in by commercial communications workers, trained by commercial communications firms. The active and passive devices used in all that commercial communications has been largely developed in the USA. Want technical information on that? Go to the USA component makers' websites. Plenty of data available. Input from USA radio amateurs was a virtual zero...the whole infrastructure is commercial, not amateur.

Is there some kind of insidious "missle gap" or equivalent now? 43 years after 1958? I don't think so in the military or commercial communications of the USA. The USA has learned to live with the threat of nuclear warfare and intercontinental ballistic missles...and has long since come up with a counter to that, the rather horrifying MAD. The USA has a rather strong military...whose communications is not modeled on any amateur radio standards and practices.

Somehow, in all the 43 years since 1958, this tremendous commercial-military structure has been created without having to interest "young people" in fun amateur radio to provide some sort of base of radio knowledge. Radio has evolved rather far since tube days and old analog radio technology has become much more electronic in nature, including digital techniques so much that there is little differentiation between analog and digital.

The existing Novice class license has been failing for years. The negative trend numbers are clearly visible. The existing Novice class license has been around for a long time and no one has bothered to "fix" it to attract enough newcomers to keep it alive. One has to look much farther into the reasons for that failure, not sugar-coat over a virtual Novice class with some new name and saying that this window dressing will make it work. Very unlikely.

So was I, old-timer. :-)   But...back then, to "kids" (and quite a few
grown-ups) circa 1950s, radio was a sort of black magic with
wires, solder, and things that glowed in the dark.

> The creation of the Novice license in 1951 was extremely successful
>in luring kids into ham radio. The availability and readily accesibile
>dirt-cheap military surplus radios and parts was another huge boosting
>factor. Any kid could and many did get on HF for well under a hundred bucks
>in 2001 dollars.

In 1951 an ARC-5 receiver in the domestic shipping carton was
$6 at W9ERU's H&H Electronics in Rockford, Illinois. An ARC-
5 transmitter was $12 and the antenna coupler and modulator
was $18. Surplus BC-348 receivers were terribly expensive at
around $49 while a less-technically-able National NC-57
"Communications Receiver" cost $98 list. In the dollars of
those days it still represented a sizeable fraction of income.

>Just about all large high schools had school-supported ham clubs and club
>stations.

Maybe in your area, but not in mine, a city of about 80 thousand back then.

>The 80 & 40m Novice bands crawled with other kids.

Really? My experience was a lot of WW2 vets were doing the crawling.

> A kid could
>actually understand the circuitry and get a soldering iron into the radios.

100 Watt American Beauty irons. Yeah, sure... :-)

>There were
>very few antenna and tower restrictions, "real people" didn't live in
>apartments.

No problem, there were very few antenna towers. :-)

> If you were a kid interested in electronics the customary
>gateway to an EE was a ham ticket.

Oh? Of five in my high school class of 1951 that became EEs, none of them had ham tickets then. I'll check up on that in August when my class has its 50th reunion... :-)

>Life in general was also very different from today. The overall pace of life
>was slower and simpler, people had more spare time.

Nonsense. People back then were saying the same thing about those of 50 years past.

>Ya didn't mess with girls until you were 16-17.

More nonsense. :-)

>There were no home computers. There were ham
>stores in every populated area.

I can drive 2 miles to an HRO outlet in Burbank, CA. It's in a mini-mall across Buena Vista from another mini-mall. :-)

>There was no horde of CBers, no cell phones, no Internet, endless list.

Let's look at the state of the art of radio for amateurs in 1958. Vacuum tube technology for everything. Rock-bound frequency control...deluxe was a VFO. No direct-reading frequency meters. Sharp-selectivity IF filters was only just starting and they were expen$ive. One had to wait at least 20 minutes until everything warmed up to reduce the drift. Almost everything was HF since VHF and above was the Twilight Zone inhabited only by gurus and wizards. :-)

One peaked the PA grid, dipped the PA plate and the PA output was a pi-network for an under-150 Watt rig. Want to have a multi-band HF transmitter? Good luck. Those were not common at all unless there was Money. There were more Urban Legends on technology than there was textbook information for anyone, amateurs included. The commercial people making things for HF were small in number but high in experience...on tube technology.

>It's all changed and I have my doubts about how much "better off " ham radio
>is today vs. 1958 even though the number of hams then was some small
>fraction of today's license count.

What did amateurs have in 1998? Multi-band HF rigs, a few of which could hit 6m. Frequency control was rock-solid on ANY frequency, any band. Solid-state PAs that didn't require touchy-touchy tuning at the higher HF bands. Sharp-skirted crystal filters for receiver selectivity, DSP for brick-wall filtering. Very high 3rd order IM characteristics and sensitivities down to noise level of 50 Ohm impedances. Push-button modulation selection of CW, AM, SSB, or FM. All kinds of towers and beams and rotators available for purchase, you install or hire somebody for grunt work. No problem. Want VHF or UHF? No problem there. Select a band or two and there is a rig available. Want an HT with rechargeable battery? No problem...lots of bells and whistles in a little box. Need an antenna tuner? No problem, take your choice of manual or automatic, be able to read forward or reverse power at a glance. All ready to go out of the box.

Anyone who wants to go back to 1958 is nuts!

> It is well established law that a governmental agency that is engaged in a commercial activity that is equal to or in direct competition with similar private sector enterprises does not automatically enjoy "exempt" status that governmetal agencies otherwise enjoy. The Legislature or the CPUC has to grant that status, usually by the use of the term "investor-owned utilities" in either the statutes or CPUC Orders.

Okay, who is the private sector enterprise that is in direct competition with the LA DWP? I'm curious since I've not heard of any private sector competitor of electric power to the LA DWP since I moved out here.

>>As of today, Friday, the DWP is selling close to 9 GWatts
>
> 9 GW is 9000 MW....equal to NINE units of nuclear power plant generation (1 "unit" is 1000 MW). Five plants the size of Diablo Canyon. Hard to believe. Where are they hiding them?

Bad note taking during breakfast while listening to TV news on one subject and carrying on conversation with wife on another subject. Let me correct my error by a quote from page B4, LA Times Valley Edition for 19 January 2001:

"On Wednesday, the DWP provided a crucial 300 to 700 megawatts per hour, or 10% to 20% of its output, to the state power grid as controlled blackouts rolled across much of California. Meanwhile, the 3.8 million Los Angeles residents wom the DWP serves had plenty of money."

Phil, nobody is "hiding" any DWP electric power generation plants. The one locally called "The Four Stacks" (visible from the hill above my house) is on aeronautical sectional charts.

Yes, Phil, I made an error in numbers. Mea culpa.

The maximum electrical power generation of the LA DWP is roughly 3500 MWe (if everything is on-line), a personal input from an Electrical Engineer who works for the DWP.

I'm sorry your QTH (or 10-20 or whatever) is being hit with rolling blackouts. Down here in Los Angeles there are no rolling blackouts. Los Angeles DWP also has a praised general manager named S. David Freeman, new to DWP as of three years ago but very experienced in utility management. What is happening is that the LA DWP already has the capacity to help out the rest of the state and is doing so without disturbing its regular customers.

Locally the DWP manager is under political fire because Freeman hasn't charged enough per MWHR according to LA Mayor Richard Riordan. Riordan is worried about $170 million in electric power sales revenue already owed the DWP by the grid's customers. It seems to me that this "little" municipal electric facility is trying to help the rest of the state and is getting dissed rather unfairly by Californians farther north. TS.   :-(

The LA DWP has the MWe capacity to serve its customers and still sell power to other power companies.. Other, private electric power suppliers don't have enough capacity. The only conclusion to be drawn there is Bad Management of the private companies. [I'm sure your mileage may vary]

So would I if I was Lockheed. The town fathers obviously shot themselves in the foot, they lost the jobs *and* the property tax income by being stupid. Same old, same old, they'll never learn.
>
I'm sensitive to enviormental issues but this mindless PC overkill has gotta be brought under control.

Brings up a piece I read a few years back. Somebody sorted thru ancient Spanish archives related to the history of the earlist Jesuit efforts to do their thing in what is now the LA basin. The locals were of course were quite ambivalent Indians who advised the Jesuits that setting up a mission in that neighbohood was not a very good idea. The Indians knew the game, the topography and wind patterns are such that they never set up camp in the LA basin because the smoke from their campfires simply stayed there and choked 'em. Their name for the LA basin was "The Valley of Smoke", decent fishing but no place to actually live.

Entry into ham radio today is for the middle aged to the retired, for those who "always wanted to but never had the time or extra money, job and family responsibilities kept me out", etc, etc. Kids have no clue nor any interest.

In the eight years I worked as a VE we handled almost no kids, nor anyone under age 30. There were a few females, but very darn few. Most of the crowd were aged 35 and up, with the oldest at age 80.

My VE time ended over 7 years ago and I don't think it has done anything but get worse since then. At that time we had no Internet access in this rural region. The arrival of that passtime pretty well cinched it.

I was using a CK722 ($5 retail) audio transistor mod in my homebrew super-regen SW receiver...

>Almost everything was HF since VHF and above was the
>Twilight Zone inhabited only by gurus and wizards. :-)

In 1958 in Phoenix we had quite a large VHF club. Maybe 50 members. We had a weekly net on 50.34 Mc. AM. I was using a BC-455 surplus arc5 receiver fed by an International Crystal converter. My transmitter was a Globe Scout 680. The antenna was a 4 element Taco beam with an "armstrong" rotator. Twilight Zone? gurus and wizards? Hardly. I was a Junior in high school at the time. I did work a lot of DX with that setup though as we were coming up on the best sunspot peak in recorded history... :-)

> Want to have a multi-band HF transmitter? Good luck.

My Globe Scout covered 80 thru 6 meters unmodified...

>Anyone who wants to go back to 1958 is nuts!

Well, as I recall the girls were prettier, and the cars and radios were neater. But besides that, heck no I wouldn't go... :-)

darrell earnshaw wrote:

> Of course you are entitled to your own interpretations and views. However, this newsgroup is about amateur radio, not politics, relgion, or other unrelated issues, and it is an inappropriate forum for personal soapboxes on issues unrelated to amateur radio. I also suspect that most subscribers to the NG probably couldn't care less about US politics or domestic issues -- newsgroups are not just for domestic US consumption - they're international. I'm sure there's a "US.politics.domestic.anti-liberals" or something newsgroup somewhere out there which is more appropriate.
>
> No disrespect intended.

That's fine, Darrell. However, I suggest that you read back over the last few months (or years, if you prefer) to see the number of politically related discussions in this newsgroup. In other words, political topics have been part of this newsgroup since its very beginning.

And there are several reasons for this. The main one is that many of the regulars in this newsgroup post here rather than chasing each other around the newsgroups simply because it is easier.

Of course, this should not bother you since you're free not to read anything that does not interest you (nobody forced you to click on my message and read it). In other words, if you see a topic that does not interest you, simply move on to other discussions.

Obviously that is hard to do when you don't agree with the content of the message you're complaining about. And it is especially hard when you cannot think of an effective argument against what is said in that message. So, instead, its easier in this case to fall back on the old "this is a ham radio newsgroup and the message is inappropriate" argument in an effort to hopefully end the discussion before it gets started.

Likewise, no disrespect intended, Darrell.

Uhhhhhh......Let's see.....

Satellites, APRS, HF DX, V/UHF repeaters, Moonbounce, DIGITAL modes, PSK31, ARES, ATV, SSTV, QRP, contesting...

Yeah, Stewart, I can see how someone could get bored with Ham Radio and give it all up for 2 watt MURS radios...

Now, PLEASE tell us how MURS is going to stimulate all those young minds...???

I don't think he has read the newsgroup at all. Just glancing through the subject headers, at this very moment there are discussions about prisons, the California power crisis, cellphones, gay web sites, top ten most popular alchoholic beverages, and Jesse Jackson. Its not about politics - he just didn't like what I said.

OK, here's the direct question: As well intentioned (and I understand your frustrations...he CAN be tiring...) as your efforts to redirect his posts, ON WHOSE AUTHORITY do you do it? What writ of law do you bear that carries any weight to try and force his hand?

And unless I miss something, you have no name. At least he puts a name to his.

And "calling CQ" is the only milestone by which you measure "hobbyist"...?!?!

>FCC rules discourage "hobby" activities on FRS.

They SPECIFICALLY discourage hobby activities on 11 meters too, but guess what...?!?!

>The range is very limited. One cannot modify equipment or attach
>external antennas. Moreover, the percentage of FRS users who will
>respond to a stranger is very small. Most wish to speak only with

>the novelty wears off, it's over, as quickly as it began.

Then it seems having eGroup's and entire "newsgroups" on so minimal an asset is pretty wasteful.

However, I do know that there ARE persons (and no small number) that are using FRS to supplement their 11 meter and scanner activities.

Seems awfully "hobby oriented" to me.

Dick, believe it or not, this was the 1st and last time I heard Curtis
on the machine. I recall one ham telling him that the root word of his
name was "curteous."

Supposedly had a ham brother around.

Correct me if I am wrong but isn't that illegal under the FCC rules?
Doesn't it say "regardless of the number of elements taken"? Maybe
you should have a talk with the VEC. Sounds like they owe you a
freebie.

Sec. 97.527 Reimbursement for expenses.

(b) The maximum amount of reimbursement from any one examinee for any one examination at a particular session regardless of the number of examination elements taken must not exceed that announced by the FCC in a Public Notice. (The basis for the maximum fee is $4.00 for 1984, adjusted annually each January 1 thereafter for changes in the Department of Labor Consumer Price Index.)

Yes you do have something to complain about. It's going to cost you another $10 to take the Extra exam at the next session when it should have been included in the last session. Whether you took it when you upgraded for general or later, they are still going to charge you an extra $10. I'd show them the FCC regulation (I posted it here in another reply to you) and ask for a freebie.

Stewart,

The Netherlands implemented a license class very close to what you propose back about 1985 or so. A communicators license intended to bring the Citizens Band under control. About 5 frequencies were set aside in the two meter band for users. A ham license was granted with no code and only a simple theory test, about adequate to determine if the on light was on! People flocked to get in on the simple ham license. The government hoped if they were really interested they would upgrade, and if they weren't they could still take advantage of the thrill of communication and not bother the others. Holland requires evidence of a ham license before you can buy a ham radio,

The result? Almost no upgrades. Those who got into it stayed there.
IS that what you want for our kids?

Yes - this is the crux of my point in including the CB group in the original post. 11 meters is no place for newcomers to be learning.

QRM;

I do understand your concern about the vile nature of CB, and CB posts moving into FRS and the FRS newsgroup. I don't know if you have noticed, but FRS IS becoming a bit more like CB everyday, and, I think we can all agree, CB is obviously not the place for our kids to be learning about radio. The more serious ones need somewhere to go. I have been working on an update to my proposal with significant changes based on the comments I have received(most importantly, I will be using the traditional term "Novice Class" to describe the class), and I will only post it to the r.r.a.p., and a.r.f. newsgroups.

Also, QRM makes a good point about staying on subject. Criticism is good, but let's all of us try to keep things related directly to the subject, and be on our best behaviour(my "Sputnik" diversion, while interesting to some, and which I thought might be relevant, turned out not to be on subject). Most importantly, I would like to ask folks not to reply to CB-like trolls and baits.

Finally, some may ask if I am serious about this... Yes, I am. It is sometimes difficult for me to see my ideas get ripped to shreds before my eyes, but I've gotten better at understanding peoples concerns, and using them to make the proposal better.

Don't be paranoid! I didn't say you were hiding anything.
I didn't say it was wrong to have a business (lot's of people
have ham radio businesses). I just pointed out that I now have
a better insight into the reasons for your nonsensical proposal.
Doesn't make you a bad person.

73, de Hans, K0HB

PS: My old ARRL license manual has questions about capacitors and
inductors in the Novice section, so you weren't "right about the
point".

Brian:

As long as I continue to speak the truth, why shouldn't I have a loyal following? This is Usenet. A part of the Internet. It is not Amateur Radio in any way, shape, or form. In this and other amateur-radio related newsgroups, amateur radio is the major topic, but still, ham radio it's not. We are not communicating over-the-air on assigned amateur radio frequencies or operating under the authority of our FCC-granted amateur radio licenses. No such license is required to post here. To pick up the mic of my 2-meter rig, press the PTT button, and say "K3LT listening," I need a license. To post here, I don't. Get the idea now, Brian?

Ed:

The hams who have the "code-key burying cermony (sic) in their back yards" are a perfect example of the slack-jawed, drooling, knuckle-dragging ignorance of trailer-trash hams I've been talking about in this newsgripe for years! Those who learn the code well enough to somehow pass the tests, and never make a regular practice of using CW on-the-air are also very common (in every sense of the term). Nobody's mileage varies on that.

Being a proficient CW operator, and a regular CW user on-the-air, defines the higher-level amateur radio operator. WE are intellectually and morally superior, and have earned the right to hold our place as the elite among amateur radio society. WE have earned the right to our privilege and status; those who come after us are only mere pretenders to our magnificent level of enlightenment. Now, leave me alone -- I'm enjoying a fresh silver platter of peeled grapes!

Ed:

That doesn't mean she isn't lazy. What is she doing with the code NOW? Is she using CW on-the-air? Is she advancing her proficiency in the mode? Or is she barking into a microphone?

If it took an "intelligent and articulate" YL over a year to pass a 5 WPM code test by the skin of her teeth, with lots of Elmering and advice from experienced hams, my guess is that she never tried using it on-the-air. Has she pumped a single dit through her dipole? I'm willing to bet she hasn't. Learning the code just as a means to an end, i.e. attaining voice privileges, will always be a burden, but that's how it is perceived. Learning the code in order to become a proficient CW operator is no burden at all.

>All it shows is that we are all different. By the rule that some have

I'm sure that she shares your politically correct, Welfare-State point of view. I ask you again -- is she using CW on-the-air? Let us in on the truth, Ed.

Jim:

Do me a favor? As your punishment for deliberately truncating my quote, in order to mask its complete meaning, make a nice, tight fist, and slam it into your mouth at high velocity. Continue to do so until at least three teeth are completely dislodged.

Here's what I really said:

"In such a situation, an armed response by law-abiding citizens would definitely be in order to prevent the armed environmentalists, convicted felons, abortion rights activists, and Ku Klux Klansmen from *actually* shooting our elected Congressmen and Senators."

>> What causes are you willing to fight and die for, Jim? Are you willing
>> to die for baby killers, tree-huggers, and violent racists?
>
>The guys in the Revolutionary War, and World Wars I and II did. So if I
>was in the military, I guess I would have to also.

Don't look now, Jim, but nobody who ever fought in any U.S. war as a U.S. serviceperson ever died for baby killers, tree huggers, or violent racists. They died for the cause of freedom, not what people do with their freedom. The fact that a certain segment of our society misuses their freedom to create a sick society doesn't diminish the sacrifice of those who fought to ensure that our freedom continued to exist.

>> (I consider myself to be an "environmentalist" also),
>
>I meant to write eco-terrorists. You aren't one of them too, are you?

Nope. I'm not any kind of terrorist. I abhor terrorism. I am, if anything, an "anti-terrorist."

>> the people you
>> mention above are just amoral, self-serving criminals.
>
>Right. So as long as it's a group you happen to agree with, it's
>constitutional for them to start an armed rebellion. That's what I
>thought.

Jim, there is such a thing as right and wrong, and I'm intelligent enough to be able to make that distinction. If you are not, then I can understand the problem you're having in understanding my post.

> thousand back then.

>
Yeah, in my area. Last time I lived in a city I was three years old, poof, outta
there. I went to a high school in a township which had around 450,00 citizens
back then, there were 450 +/- of us in the graduating class of '55 which included
6-8 hams. Which school is hard by the City of Philadelphia where the numerous
high schools both public and parochial were bigger and they were *all* on the

bands.
>

> >The 80 & 40m Novice bands crawled with other kids.
>
> Really? My experience was a lot of WW2 vets were doing

The norm was to swap and log ages as Novices and very few were 30 or over. Most of the bubble of WWII vets who got into ham radio as a result of their wartime experiences already had their ham tickets by '53 when I got on the air, certainly by '58 which was 13 years after WWII ended.

>
Do that. At least three of the former Novices in my high school class went on to become EEs and two of us went into other engineering disciplines. One of the electron jugglers went on to become a GE VP. No doubt non-hams also became EEs but not out of that class.

Wrong. The Harvey-Wells bandswitched 160m thru 2m inclusive (might have been 80-2m). Plus the Valiant I & II, the Collins 32V series, The WRLs, B&W, many others.
>

>
> Anyone who wants to go back to 1958 is nuts!

>
Of course, but that's not my point. My point is that in many instances the hams who came out of the 50s & 60s have very different views and values than do those who came in during the 80s-90s. Much of the "activity" in rrap is based on those

differences. No biggie.

Amateur Radio is not intended as competition to MURS, FRS, GMRS, CB,
MARS, or any other radio service. And creating a new "Barbie Doll
Radio Service" distinctly segregated from mainstream Amateur Radio
will ultimately be damaging to Amateur Radio.

Aren't you over-simplifying a bit, Brian? You are dealing with public utilities six inches from bankruptcy so you are not all that sure of being paid at all. A lot of these are natural gas turbine plants (a lot of them surplus jet engines on an alternator) and you have seen the price of natural gas lately on the spot market. Under the circumstances no sane supplier would get anything less than top dollar when he may very well have to take 20 cents on the buck five years from now. Orange County welshed on its debt so sovereign California is a crummy risk let alone one of their utilities.

There has been a lot of babble about 'long-term contracts' so maybe someone will learn a bit about the running of a power company. You have to plan for base load (the minimum draw on the system), seasonal loads (like winter or summer), and peak loads (when the coffee pots and electric water heaters come on in the morning) plus planning for intended or unintended maintenance.

For base loads, nothing beats the nuke. Burning coal or oil will actually raise the background radiation more than the equivalent hot rock and has a lot more total environmental damage. Being somewhat more variable, coal plants are ideal for seasonal loads. Union Electric in St. Louis takes advantage of a characteristic of coal plants -- that it takes almost no added fuel to run between about 75 and 90 percent -- to pump water up Taum Sauk mountain at nite and let it run hydro during the day. Peaking is by necessity a low-capital, high running-cost operation at one time served by firing up old plants that were not cost-effective any other time; environmental regs brought this to a grinding halt hence the jet engines.

Obviously, maintenance considerations enter the picture and California complicates the issue with annual pollution maximums. So one interconnects both for emergencies and cost considerations; if the Bureau of Reclamation has some extra hydro available why burn coal? You do have to take down the nuke for fueling and boiler tubes and flues do on occasion have to have the crud removed. One does not put all the eggs in one basket; we leave that to beancounters and politicians.

So this puts some problems in the hands of those designing and operating the connecting grid. When you buy power you in effect have a generation station at the border; when you sell, you have a major load at the border. This gets complicated by Esmerelda Q. Fartblossom bellowing, "No matter what anyone says, transmission lines cause leukemia and besides they are OOOOOOGLY" It is notable that the north-south transfer capabilities of the California grid are severely limited, in effect giving the state two systems.

While micropower installations are probably a good idea, presenting in general only the risk of electrocuting your linemen from an unknown source, such items as windmills and solar with their attendant problem of non-cooperation by the weather present some interesting network design problems as well.

Separating the grid from the generation facilities was basically dumb but handleable if not in the hands of politicians. It just collapsed sooner than later.

It is apparent that neither California system is meeting even its base load locally. Base load plants require tremendous capital which in turn requires a stable planning horizon and some form of guarantee of a return -- the dark side of regulation. As with most utilities, what you are really paying for is the bondholders. As a result, you usually get ossified management.

It is not a job to be run by committee or public hearing although I guess one must maintain the forms and illusion of democracy. In a state which conducts public hearings on the social impact of a new area code, the future does not look bright.

No, I meant "dribble" that is what morons start to do when they talk
excitedly. Go learn some more.
Opposition? Hardly;  go play in the mall with your FRS radios and stop
taking up space in this group with your nonsense. Cross posting can go both
ways.

Now go change your diaper, colostomy boy. That's what you have to do on
a hourly basis from what I've heard. Of course, it wouldn't have
happened if your drunken, alcoholic daddy didn't use you as his bitch
for years.

>BOO!

Even though you never have to really dress up for Halloween, it's still way too early for it.
You're so stupid it's a wonder you can remember to breathe. A half-wit gave you a piece of his mind, and you held on to it, isn't that true, PISSFLAP?
Now, why don't you two attack W4NTI, he made a "non-agression" pact with W4AMP as well?
Or are you just a couple of hypocrites?

What did you e-mail me that you liked to ream with your tongue??
> Asshole.

Yeah, that's what it was.....
Hey, I heard you went to the butcher and asked for 10 cents worth of dog meat and he asked you if you wanted it wrapped or if you would eat it on the spot.

Fuckhead.

     Perhaps if you thought them out a bit more.  This is/was a WAY
BIG "been there/done that".  You reworded it a bit, but it was the same
thing you submitted last year, and it's still just as untenable today.

> but I've gotten better at understanding peoples concerns, and
> using them to make the proposal better.

     Keep any proposal simple, mainstream and appropriate.  A handful
of segregated channels at UHF is NOT the way to go.

Good point. There's a lot to be said and a lot yet to be learned about geo-thermal energy. Until very recently I was working on a project in a building which was originally built as a commercial aircraft hanger. The next building over is also a hanger converted to industrial use. The owner of that building had a geo-thermal firm come in and punch twenty-some thermal wells in the front lawn, install a complete heating/AC system, etc. Lotta bucks to get it running but the owner expects to get heat & A/C energy savings somewhere in the 75% range. Struck me as amazing, I had no idea it was possible. This is not SoCal, our lows go to sub-zeros and the highs can hit over 100F with electricity somewhere in the 13 cents per kwh. range. That guy is gonna save tens of thousands of dollars per year, he'll get his investment back very quickly.

>

Yeah, a lot more needs to be done with geo-thermal energy in all it's forms.

>

A week or so ago it was announced that the first investor-owned wind power plant came online, 200 monster high-efficiency windmills somewhere in the Northwest.

Seems like. The question is whether that's a no-counter or big trouble down the road.

I'm absolutely convinced that the Internet is the worst thing that ever hit ham radio. Beyond that I don't think for one minute that a "solution" is to introduce Internet-like capabilities into ham radio, they're two entirely different animals with the only commonality between the two being competition for what people chose to do with their leisure time.

>

We should get a better picture of what's really up over the next few years as the licensing stats stabilize.

Enron has been running one in Iowa for years but is limited by Iowa P&Ls grid. It is on their website.

Look at the companies they got to do the designs of everything from the propellors to the gearboxes to the towers. Reads like a Who's Who of engineering couth.

:-) Of course, Dick; they changed things because you got on rrap and "protested" a lot.

>You gotta wonder if there would have been any improvement in some of the
>questions had we not sounded off so much about them.

Some of us don't have to wonder...

> Whoever changes the questions must have been paying *some* attention.

They did if you sent them your input. If you did not, all of your protestations here were a tempest in a teapot.

>I'llhave to sign into the HQ website and check out the current question pool.

Have you really been "protesting" and insulting people without having looked at the pools?

> They would be hard to answer without knowing the material.

I think that the questions I discussed on another thread about meters vs frequency are another good example. I bet the guy was relieved to know he could answer all those questions by memorizing 300/F instead of rote, eh?

There are some questions in the pools that I think are too easily memorized without understanding, but, IMHO, they are a minority.

>So without an effective test what assures that a licenesee ever did
>anything at all???

We need an effective test, to determine that the applicant has the qualifications to operate within the rules and to meet the regulatory goals of the Amateur Radio Service. I believe that the testing we have to day does that at least as well as the testing that got me into ham radio.

As to determining what a licencee did, how about we, well, determine what he or she actually did? The accomplishments of hams after they get their licenses form the reasons for the very existance of the Amateur Radio Service. If all hams did was pass Extra tests, of ANY era, there would not be sufficient justification for our use of the spectrum.

It is all relative, isn't it? Do you believe that passing the entry-level test of today -- the Technician exam, demonstrates more or less electronics and radio knowledge than passing the entry-level test of 1963? To help compare, I posted the 1963 Novice study guide in another post; I will send it to you if you missed it.

Very well put and accurate.  I just heard the former President tell
everyone how much good they had done.  And that just because they were
no longer in political power, that was not a reason to stop doing what
they did for the last 8 years. Hmmmmmm, where's Monica?

I am holding out hope that after the American public saw the demoncrats
in action in Florida, they will put an end to this feel good crap once
and for all.

Amateur radio operators are thinking individuals. (for the most part)
Amateur radio operators think of other things, besides "rig here is".
(for the most part)

I have no problem of discussing things that effect our lives in the
context of a 'radio group'. In fact it gives us the thing that keeps
it all reasonably civil. And whats that you ask? A interest in radio.

Just my opinion, no disrespect intended.

Dan/W4NTI

Quite permissible under the rules as a third-party participant under a control operator.

>>The "gaff" could have been avoided if everyone had decided that it wasn't a

>>enough deal to be labeled a "gaff" in the first place.

>A gaff is simply a social error.

Okay, let me reword it.

>>The "gaff" could have been avoided if everyone had decided that it wasn't a

>>enough deal to warrant giving the new ham a public tongue lashing.

Does saying "personal" instead of "name" or "handle" really need to be a "social error" in the amateur community?

He hasn't delegated the authority for the collapse yet :-)

just look at Enron.com and select Enron Wind. Incidentally, they run a
1.6 MW plant at Tehatchapi CA.

My apologies. I've been under the mistaken notion that this
particular newsgroup discussed POLICY in regards to amateur
radio and amateur radio regulations.

If it was concerned with POLICY then I expected some
consideration with the coexistance of amateur radio with
other radio services.

Maybe there will be a scientific breakthrough soon where
there will be separate EM spectra just for the different
radio services...

Something other than Guns and Gunnery, Politics, Morals
and Ethics in Modern Society (and resultant decay of

same) and other "radio" subjects? OK, fine by me...

Dickie...please try to stay out of areas where you have insufficient knowledge of the subject. Had you properly researched the situation of geothermal energy, you would have found that there is not enough in California to make it worthwhile. Even "wind farms" of many, many wind turbines barely make it on competitive energy production.

The "vested interests" in electric power production are nuclear, fossil-fuel, and hydro plants. The rest are gist for Discovery magazine, maybe Scientific American, but the running costs per MWe can't compete with the three major forms listed.

It would be better served to concentrate your explorative efforts to innovating something like a pedal-powered electric generator to go along with the key and CW rig you said you used to carry around with you at all times.

Old story out here. One thing that happened from the LA basin
experience is some serious consideration about air pollution
from vehicles. That has worked out quite well for the nation, like
it or not. Measured air quality in Los Angeles and surrounding
area is now ranked as moderate and quite comparable to other
US cities not having such geographic anamolies. The old Bob
Hope radio show jokes about smog are just historical items now.

Just to hedge bets, though, my nearly 38-year-old house is
located in the hills of the Verdugos rather above any smog
(840' MSL by topo map). Bad for radio propagation since

Heh, it's already started.  Item in Saturday's LA Times says the
"PX" or Power Exchange in Pasadena, CA, (place for trading
electric power, kind of a junior stock exchange) is now laying
off staff, expected to close down.  Electric power trading now has
to revert to old system of power companies calling other power
companies like they did in the "old" days.   :-)

It's not always easy living in a "test bed" area...

>
```

>Yes, because that's the way it was. How many daycare centers were there in
>1958?

I can remember at least five in my home town but remembering
daycare centers were not a priority when I left it in 1956. :-)
At least four of those were begun during WW2 when more folks
worked.

>> >There were no home computers. There were ham
>> >stores in every populated area.
>>
>> I can drive 2 miles to an HRO outlet in Burbank, CA. It's in a

>differernce. We have one left which a true rarity.

The HRO in Burbank is about the size of H&H Electronics in
Rockford, IL. "Owner-operated" businesses carrying consumer
items are on the decline all over, a consequence of economics
rather than radio or customer-specific commerce.

A significant difference between 1958 and 1998 is the amount
and variety of ready-built amateur radios and equipment. On
the floor, not 'ordered-from-catalog' items.

>Wrong. The Harvey-Wells bandswitched 160m thru 2m inclusive (might have been
>80-2m). Plus the Valiant I & II, the Collins 32V series, The WRLs, B&W, many
>others.

Harvey-Wells went all the way to 2m in 1958? I thought the
Gonset G76 was sort of SOTA with 6m at the top end.   :-)

At Ramo-Wooldridge (the 'RW' that spun off TRW) there was
a young engineer with a KWM-2 in his Triumph sports car
back in 1960. That's rather an exception to the rule, I think. :-)

>> Anyone who wants to go back to 1958 is nuts!
>
>Of course, but that's not my point. My point is that in many instances the
>hams who came out of the 50s & 60s have very different views and values than
do
>those who came in during the 80s-90s. Much of the "activity" in rrap is based
on
>those differences. No biggie.

Each generation has different views and values. :-)

Problems come about when each generation tries to instill its
set of values on other generations...because they "are right."
:-)

Interesting constant here and in ham publications: "We have to get the young interested!" It's become a mantra.

Invariably that "need" is espoused by those who became interested when they were young...which may or may not be part of the "you have to do it they way I did it" school of ham religion. Why just the "young?"

Grab them when they are young so they can be brain-washed into "proper values?" Amateur radio is a hobby, not a political doctrine.

Grab the young because adults have the temerity to talk back to other adults? Amateur radio is a hobby, not a military service.

Grab young folks so they can "get started on a career in ham radio?" Amateur radio is a hobby, not a trade, guild, union, or profession.

Maybe I'm wrong, but I and all the people I've worked with in electronics in general found the subject very interesting, fascinating, even fun...at any age. Why can't the interest begin at any age group?

The information you had access to may have been stale, and never was
entirely accurate.
The class-D license did in fact give you 6 channels. You had to upgrade
within two years. THe upgrade requirement was later dropped.
After a short while the examination level was graded up quite considerably.
The license class was changed accordingly and now gives you a CW subband, an
SSB subband and an FM subband on 2 meters and on 70 centimeters.
The D-callsigns were assigned alphabetically, starting with pd0aab, then
aac, aad etc.
If you look in the callbook, you will notice that there are not many left
over. Many of the "old" names are now found under the A or C class entries
nowl
To recap: Dutch A-class is "everything" (hf, vhf and up, all modes) and
requires morse code and electronics theory. C-class is VHF and up, all
modes, requires same theory but no morse code. N-class replaces D-class (N
for Novice) and requires limited theory, gives acces to Novice subbands on
2m and 70cm.
No-code on HF has never existed in Holland, but we all know the rumours..
just have to see what happens now.

have a good one,

Rudolf

> > So why would anyone fight that?

> Four pages vs sixteen pages vs over 200 pages. Which are you calling
> "extremely simple" again?

Again, since you only seem to have focused on the sound bite and not what I wrote; "The Novice ticket [1973] was extremely easy if you has [had] someone to to work with on it."

I certainly wasn't talking about Q&A Publications at all, or even the recent license restructuring at all (that I feel will have have far less impact than that of the loss of the Elmer-Novice entry to the no-code tech entry years ago). And don't think I didn't notice you changing the subject in order to plug your publications, but I am an ARRL supporter (on a great many issues) and long time member. Let's for a moment ignore the absolute number of pages because there is certainly more to a publication than the number of pages. In 1973, I found the License Manuals completely inadequate for study of the concepts that the radio amateur really needs to know in order to understand what he is doing, and how to get the most out of his station, and to do it without interfering with the neighbors. I turned to the 67, 68, and 69 editions of The Radio Amateurs Handbook in my study, long before taking the Novice exam and continuing to learn about amateur radio operations by doing, by making mistakes and by polishing my craft under the guidance and on the shoulders of those who went before.

Not by taking a packaged course that promises that I will be a ham when I take a test at the end of the seminar (as some VE's out here are promising). There is so much about Ham Radio that can't be taught in a publication or seminar because it is way too impersonal and doesn't give enough hands-on like the Novice License did.

Let me explain another way: The Novice License was an easy way to get on the air and get a taste of Amateur Radio, and provided a proving ground fertile with learning experiences with time to progress. The current entry situation caters to instant gratification and bestows priveleges not yet earned by experience.

> I agree; the lack of Elmering cost us a lot of hams. So did an "Elmering"
> process by which some hams made newcomers feel like they were seen as having
> come from "skid row..." I don't know which had the larger effect.

Perhaps the greatest effect has been from establishing "Skid Row" as an entry level training ground in 1959, that many find difficult to "unlearn" when moving forward.

Jim, ac6tk
PS, I just had someone explain to me this morning that reverb improves "talk-power". I'm sorry, but I couldn't help laughing.

> A week or so ago it was announced that the first investor-owned wind power

plant
> came online, 200 monster high-efficiency windmills somewhere in the Northwest.
>

California has considerable windpowered electric generating capacity already, tho I don't know its efficiency level. Altamont Pass on I-580 about 30 miles east of San Francisco is almost surreal, you cruise over the mountains surrounded by hundreds of large modern windmills, of several designs including Savounis(sp?) Rotor ("eggbeater") style, all churning away, dumping their output into the power grid. There's another similarly sized field on State Rt 58 at Tehachapie Pass east of Bakersfield, well to the south. These locations are places where the wind almost never stops. I don't know much about the capacities of these generators nor much else about them (and would be interested) but they appear to be sizeable. I'm told that all are privately owned by investors who sell the output to power distributors, who are mandated under law to buy it.

Evidently these have long been absorbed into the consumption scheme and many of the windmills have been in place for a long time, and each time I go out that way I see what appears to be newly installed units.

Dick

The Energy Calamity is quite localized and not likely to hurt your 401k but is being portrayed as an indication of "the need" for further government control. The state has so many "partners" and restrictions on the private sector already, it's hard for business to compete with them. A great many business operations have moved away over the years because of this. I suppose now that the census and re-apportionment is over with, we can now all leave.

During the current stage III alert, many businesses and schools have to drastically reduce or shut down electricity because of the rate plan that extorts extreme penalties and fines for exceeding set stage III limits. Even though the blackouts are being imposed up north, businesses and schools all over the state have been closing or operating in the dark because of the stage III restrictions.

The real calamity is that this was allowed to happen at all in a (supposed)civilized society.

Jim, ac6tk
PS "over-robust"... is that something like excessively-winning? Why did we have to beat down Microsoft?

OK, rather than a bunch of old geezers sitting around casting cold water on Stewarts idea, let's look at it from the view of the intended market.

Dick and Jane, 14 years old, have "had it" with the limitations of the FRS and now are "interested in experimenting with radios". They've heard of something called "ham radio" and are investigating the entry classes.

Jane says "Here's something called the Technician class. You have to take a simple 35-question test."

Dick says "Here's something called the Colt class. You have to take a simple 25-question test from the same pool."

Dick and Jane decide to investigate further, to see what difference the 10 additional simple questions make.

Dick says "Colt gives you six simplex voice/digital channels on 446, and another six simplex voice/digital channels on 223MHz. You can even build a simple little repeater between them, as long as input and output are not on the same band."

Jane says "Technician gives you 22,243 Megahertz of spectrum on 16 bands between 50MHz and 250GHz. Holy Cow, Dick, that's millions and millions of frequencies instead of just 12."

Dick says "With a Colt license you can transmit 5 watts of power. That's a lot better than FRS!"

Jane says "5 watts is for sissies. With Technician we can transmit 1,500 watts of power!"

Dick says "Yes, but the Colt radios are cheap."

Jane says "Sure, but there are lots and lots of used radios around for Technicians, even cheaper, and your Colt radio will be basicly useless if you upgrade."

Dick says "Hey, but I could put my Colt antenna 20 feet above the house if I want."

Jane says "Big deal, Technicians have no arbitrary height limit like that; they can go as high as zoning laws allow, and even higher with conditional use permits."

Dick says "The Colt license will be a lot of other kids just like me."

Jane says "I thought we were sick of kid stuff, and wanted to experiment. The Technician license lets us talk to kids and doctors and lawyers and indian chiefs and satelites and astronauts and W1RFI even."

Dick says "Colts can use both voice and digital modes."

Jane says "Hey, with only 10 more simple questions the Technicians are allowed all of that, and other neat stuff like SSTV, FSTV, telecommand, and space communications."

Dick says "Jane, you are right. This Colt thing is really lame. I always said you were smarter than me. I could just kiss you."

Jane says "Dick, only after you pass your Technician License
test, and keep your clammy paws off my double bazooka antenna."

The need for all of this will go away once my group leaps into action. When we have eliminated all the "elitism" on the bands and issue every citizen an Extra class license, as is their God given right, all will be right with the world.

Top ten signs you're in a Hiram, GA hospital

10. You go in for routine surgery, you come out with a tail.
9. You recognize your doctor as kid who was mopping the lobby when you checked in.
8. Instead of sponge bath, they send in a St. Bernard to lick you.
7. As you're going under, your surgeon says, "man, am I baked."
6. In operating room, you see Roger Wiseman scrubbing up.
5. Every couple of minutes you hear a bugle playing taps.
4. All the diplomas on the wall are signed by Sally Struthers.
3. You and your roommate have to take turns on the I.V.
2. Through fog of anesthesia, you hear surgeon shouting, "bring the damn scotch tape!"
1. Instead of "patient" they use the term "plaintiff."

Top ten signs you've visited a Hiram, GA chiropractor

10. When you walk, you make a wacky accordion sound.
9. Keeps saying, "A spine is like a box of chocolates."
8. Repeatedly asks, "You a cop? You sure you ain't no cop?"
7. Over and over, you hear crunching sounds followed by "Uh-oh."
6. There's a two-drink minimum.
5. At end of session, lies down on the table and says, "My turn!"
4. He was trained by Roger Wiseman.
3. Rushes in late to your appointment, still wearing his Burger King uniform.
2. Hints that for an extra $50, he'll "straighten" something else.
1. You're fully-clothed and he's naked.

Don't worry about Larry, Ed. He knows how to be worshipped for his
"privilege and status" even if he's the only person around. :-)

All that water flowing from the Delta down to Los Angles in the
California Aquaduct always seemed to be wasted energy since enroute it

could easily be generating electricity several times over. I know of one reservoir enroute where water storage is shared with power generation. Then down south of Bakersfield where the Valley runs into the mountains it all has to be pumped, using a LOT of electricity of course, across those mountains on the last leg of the journey to LA. California has done apretty good job of taking care of its water needs, but seems to have sorta overlooked a stable supply for its longterm electrical requirements.

We know that hyodrelectric generation is but a drop in the bucket. Even back in these parts where there are several largelakes with generating dams on the White River System, it only makes up around 5% of the total used. But I'd imagine that same 5% could be very helpful to northern Cal right now.

And there *are* significant if undeveloped geothermal resources in several places in the Golden State. One is the area around Bishop and the east slope of the Sierras. It matters not if they're far from metro areas. What ie needs is development. In the Upper Napa Valley there is a fair sized geothermal generating plant online now. Point is, even these lesser installations help a lot in a squeeze, just as you mentioned with Taum Sauk Reservoir. They can use it for peaking whenever needed. Mostly hydroelectric power in these parts *IS* used for peaking.

Did you ever drive up and take a close look at Taum Sauk lake on top of one of Missouri's two highest peaks, that you mentioned? It's a very impressive 40 acre lake with the supply/drain tubing carved out from inside the red ganite stone that is the mountain. The water falls 980 feet to the turbines, and gets pumped back up that far overnight. UE gets a lot of efficiency and a very good return out of that investment. And what a engineering and construction project!

>
> Separating the grid from the generation facilities was basically dumb but

> than later.
>

I have little faith in elected officialdom in the Golden State. I spend at least a month each year out there, and have for a couple decades, from south of San Diego to the Amtrak exit at the northern border. The state has a lot of attactive attributes, but these do not number in selected important elected officials' reasoning power and common sense. Political Correctness and assuring their reelection is far more important than needed hardware or realistic planning.

> It is apparent that neither California system is meeting even its base

> ossified management.
>

I think this statement proves my last. The most important part of their future utility supply planning seemsto have been to get the rates down so as to maximize their political capital, and let the distant future be taken care of by whomever was unfortunate enough to be in office at that time. What they failed to realize was that the future was coming a lot sooner than they thought.

> It is not a job to be run by committee or public hearing although I guess

As long as they maintain the same political direction they've followed for the past 20 years they're doomed. Something's gotta give.

The worrysome feature of California is that it always seemed to be about 20 years ahead of the rest of the country in most areas of modern life. That has at times seemed a bit scary. Today's crisis just emphasizes that feeling. You wonder who else is sitting that close to the edge.

Dick

You still can't let go of the license. Must be a paper fetish.

Repeatedly you assert that the test is pretty much worthlessand most
unnecessary. So then why even have one? Or is that down the Agenda a
ways?

No, it doesn't need to be used at all. The user should have presense of
mind enough to learn a few conventions before he heels his own tongue.
If he doesn't he'e better be a fairly fast learner.

The Harvey-Wells Bandmaster, 50 watts (807?), CW & AM, fairly compact, stood on
what would usually be the end of it's cabinet. About twice as high as wide, sucked
up very little desk space. Went to both 6m and 2m in addition to HF. I think it
listed for $249.95 in the early 50s. The big sloping panel linear scale VFO
slipped under the cabinet and was another 50 bucks or so. Died from overdoses of
TVI and ssb.

Bit of panel-butchering but it was his dime. There were others, wa3atp had a Swan
350 xcvr *and* a Swan kw amp tucked under the dash if his big Olds. The mobileers
are an inventive bunch and some are slightly whacky.

Bah. I have absolutely no idea why this "we gotta get kids into the hobby or ham radio is gonna die!" thing is so pervasive. Makes no sense at all to me.
>
The youth factor associated with the 1951 Novice license happened under much different conditions in much different days and I doubt anything like it will ever be repeated. It's of some historical interest, it obviously left a big footprint, there were a helluva lot of kids but for the biggest part the history is the sum total value of it today.
>
Ham radio is a great hobby for all ages but particulary for the eldercrowd. They have the time, they have the money and they have attention spans longer than this morning. We have several housebound hams around here whose only opportunity to socialize on a meanigful basis is via the airwaves. Providing them with that ability is 'way above most of the rest of the "items on the list" used to justifiy the existence of ham spectrum space as far as I'm concerned.
>
The kids need to be shown ham radio and supported if they do express an interest ditto any others of any age. A mindless thrash to twist ham radio into something it is not, has never been and never will be just to "attract kids" is nonsense preordained to go nowhere.

>If he doesn't he'e better be a fairly fast learner.

If I were getting into a new hobby that involved a community, as does ham radio, and was given the impression that I "better" be a fairly fast learner, or I would receive a public lashing for what I felt was an innocent choice of words, I would very quickly decide that is not a caring, sharing community. I almost certainly would find a different circle, because with friends like that, I would not need enemies.

Fortunately, when I first became a ham and probably made "gaffs" that I wasn't even aware of, I didn't receive the type of "welcome" you are describing.

IMHO, telling people what they "better" do is not in the spirit of ham radio that I have respected for decades.

>Repeatedly you assert that the test is pretty much worthlessand most
>unnecessary.

I have never said that, Dick. Did you really understand that from my words, or does it suit your Agenda somehow to try to convince people that that is what I "really" mean?

To clarify it again, although I am pretty sure you won't remember this any longer than you will remember it the last time I said it, I believe that the testing of today tests the ability of the applicant to function within ham radio at least as well as did the tests of the days when I entered ham radio.

>So then why even have one?

I disagree with you; I feel it is important that ham radio have testing that tests the ability of the applcant to function within the rules of ham radio.

>Or is that down the Agenda a ways?

Not by me. I feel it is important that ham radio that test the ability of hte applicant to function within the rules of ham radio.

>Again, since you only seem to have focused on the sound bite and not
>what I wrote; "The Novice ticket [1973] was extremely easy if you has
>[had] someone to to work with on it."

I found the 1963 Novice simple enough that I don't recall that I had to ask W1BNB anything about it. I posted the 1963 study guide for the Novice; compare its scope to the exams of today. If you are saying that the 1963 Novice exam is very simple compared to the Technician exam today, then we are in complete agreement.

>And don't think I didn't notice you
>changing the subject in order to plug your publications,

I don't think that ARRL is going to sell many 1963 study guides. My intent was not to "plug" ARRL's pubs, but to use one as an example of why I do not think the exams of today are simpler than they were in the era where I was first licensed.

> but I am an ARRL supporter (on a great many issues) and long time member.

I, too, am an ARRL supporter, although I have not agreed with ARRL on every issue nor do I think it is doing as good a job as can be done in every single thing it can do. I have been a member since about 1986, when I joined the staff.

>Let's for a moment ignore the absolute number of pages because there is
>certainly more to a publication than the number of pages.

I would agree if we were comparing even 50 pages to 200 -- 50 good pages can communicate more than 200 poor ones. But 4 pages for the Novice study guide vs 200+ pages for the Tech study guides is a lot to ignore.

>In 1973, I found the License Manuals completely inadequate for study of the
>concepts that the radio amateur really needs to know in order to
>understand what he is doing,

Absolutely correct. But they were adequate for the study of the concepts needed to pass the tests.

> and how to get the most out of his station, and to do it without
> interfering with the neighbors.

Then, as now, there clearly was a lot to learn after passing the tests and being given the priveleges -- a lifetime of learning for me, anyway. If all there was to ham radio was the test I took, either that test would have taken a lifetime to complete, or ham radio would not be of any interest to me.

>I turned
>to the 67, 68, and 69 editions of The Radio Amateurs Handbook in my
>study, long before taking the Novice exam and continuing to learn about
>amateur radio operations by doing, by making mistakes and by polishing
>my craft under the guidance and on the shoulders of those who went
>before.

I studied ONLY the 4-page study guide for the Novice and several months later, those 16 pages for the General. I bought a Handbook and Antenna Book later, and learned a whole lot more, including why some of those answers were correct. I think it was years later, in my TV repair days, that I finally figured out what a parasitic oscillation was and why it could cause RFI. :-)

>There is so much about Ham Radio that can't be taught in a
>publication or seminar ...

or by taking a test; it is only by doing, over an entire lifetime, that we discover our own personal potential in ham radio. I was a late bloomer. :-)

>because it is way too impersonal and doesn't
>give enough hands-on like the Novice License did.

What hands-on? I read 4 pages and took a test -- I was a Novice. The hands on started with the Novice license for me, but continues to this day. I am still learning.

>Let me explain another way: The Novice License was an easy way to get
>on the air and get a taste of Amateur Radio, and provided a proving
>ground fertile with learning experiences with time to progress.

>The current entry situation caters to instant gratification and bestows
>priveleges not yet earned by experience.

More instant gratification than I got by reading 4 pages of study guide? Although I had lots of Novice experience before I took my General to get all amateur priveleges, the rules did not require it. I could have studied 16 pages of study guide and passed the tests.

Yes, it goes to 2 M. I have one in my shack.

>>Died from an overdose of TVI...

Then it is a darn good thing I never used it; it would not do for me to be
causing any RFI. :-)

>The youth factor associated with the 1951 Novice license happened under much
>different conditions in much different days and I doubt anything like it will
>ever
>be repeated.

Both for social reasons, Brian, and for the simple reason that the generation of hams who entered ham radio by that route does not seem to want tests to be made that simple again. :-)

The FCC is also not inclined to create a one-year, non-renewable license again, either.

>It's of some historical interest, it obviously left a big footprint,
>there were a helluva lot of kids but for the biggest part the history is the
>sum total value of it today.

There are now more modes commonly available to hams, more stable and reliable technology, more frequencies easily used -- the license had to change.

Too bad; that simple 20-question exam for the Novice brought a lot of people into it. What surprises me is that even with the entry-level being at least an order of magnitude more difficult and more complex, growth continued. I don't think I would be a ham today if someone had handed me a 200+ page study guide and told me that this is what I had to know to be a beginner in ham radio. And if they then told me that it was "dumbed down" from that 4-page book THEY had to read...

For God's sake Ed, you are working so hard to be politically correct. I guess if a kid is learning baseball, you should not point out he is running the bases in the wrong direction for fear he will give up baseball?

Give me a single reason we should be bending over and kissing some snot nosed kids ass to get him active in ham radio! If they are interested, I will bust my butt to help them.

I have Elmered more than a few in my time, but at no point did I waste time on anyone who had no interest.

I had one guy wanted to be a ham and was having trouble with the code. It took me a while to realize his problem was not the code, he did not know how to read or write. I worked with him for over a year and he earned his ticket. I remember him struggling to read to become a ham, then I listen to all the cock and bull about "how tough it is on the children to get a ticket".

Give me a break!

No biggie, providing one has the specific software, receiver with properly-modified AGC and wideband output and a late model PC and VCR. The technique was developed by a ham at Boeing who sold/gave it to the FCC in the early 1990s and AFAIK the program is available "on the market".

Whether one has the necessary training and qualifications to interpret the results in a manner to be accepted as expert testimony is another matter.

1.6 MW? That takes about 3000 HP to generate....any respectable freight locomotive prime mover can do that.

(That's Tehachapi, BTW).

There has been a "windmill farm" in Altamont Pass, 45 miles east of San Francisco, for over 25 years. As long as the state PUC mandated that the PG&E had to buy its power at retail rates, it worked.   When the state subsidy ended, PG&E said "thanks but no thanks".

I wonder whether the windmills were spinning this week.

Call the FCC Consumer Assistance Center (1-888-225-5322) and request that they send/FAX you a copy of the FCC Public Notice issued a few months ago warning that the use of these devices is unlawful. If that does not persuade the school management to cease and desist, call the same number and lodge a complaint, which will be investigated. This has a much higher priority than kerchunking on two meters.

And thus you shed all the Clint DeSoto notion of a fellowship of hams
who share a mutual respect, which was the thread that K0HB was trying to
promote, except without the fellowship and mutual respect. I think it
had something about learning the code, which apparently is far more
important than learning fellowship and mutual respect.

At this point I think its probably OK to tell you to join the KMA club
and ask you to retell your "Favorite Black on the Bus" story, since
we're not ditty boppin or QSLing.

Your objection will only cause people who enjoy getting goats to
just try even harder to get yours. Why not just use your newsreader
kill file feature like I do? There is no way you or I can stop
others from crossposting.

Dick has this delusion firmly set in his concrete brain. "Anyone who
is happy about lowering the Morse code requirement to 5wpm also wants
to eliminate all testing." There's no way to fight a delusion, Ed.

Of course, fellowship and mutual respect is impossible without Morse
code. Where have you been, Brian?

On 20 Jan 2001 22:14:35 GMT, Dick Carroll wrote:

>> While micropower installations are probably a good idea, presenting in
>> general only the risk of electrocuting your linemen from an unknown
>> source,

Not if the system is properly designed, with lock-outs and
safety precautions taken. A while back I watched a transformer
switch-out and was heartened to see the crew hot-stick a line
that they themselves cut out and grounded. The electrician
installing a tap for a second subscriber on the premises entry
lugs (the reason for the switch-out) went in and probed the
meter-board even though he watched the transformer being hauled
down from the pole and the secondary leads were clearly waving
in the breeze.

Take no chances, or as the ARRL pubs say "Switch to Safety".

When my wife worked at the Dow Chemical plant in Pittsburg,
CA she was horrified to see the cogeneration primary and the
utility primary cross on the same pole....a disaster waiting to
happen (and it did, with attendant fireworks).

As I said, "properly designed"....

> All that water flowing from the Delta down to Los Angles in the
>California Aquaduct always seemed to be wasted energy since enroute it

>could easily be generating electricity several times over. I know of one reservoir enroute where water storage is shared with power generation.

The California Aqueduct originates in the Oroville Dam (on the Feather River) where PG&E generates the hydro. There are several small hydro plants above there on the Feather River. Which one are you referring to?

>Then down south of Bakersfield where the Valley runs into the mountains it all has to be pumped, using a LOT of electricity of course, across those mountains on the last leg of the journey to LA.

IIRC most of the "hops" on the California Aqueduct are siphons, where the function of the pumps is to start the siphon action. My recollectuion is that the entire system is balanced to the point that even including the electricity necessary for the pumps, there is an excess of juice which is sold to the utilities.

>California has done apretty good job of taking care of its water needs, but seems to have sorta overlooked a stable supply for its longterm electrical requirements.

"Vote Yes on Water" - 1960 Prop. A - built that project.

>In the Upper Napa Valley there is a fair sized geothermal generating plant online now.

The Geysers is a very old plant that PG&E sold off because it was no longer cost-effective.

> I have little faith in elected officialdom in the Golden State. I spend at least a month each year out there, and have for a couple decades, from south of San Diego to the Amtrak exit at the northern border.

The last Amtrak stop before Oregon is Redding, which is quite a distance from the border. Do you take Amtrak? I make the rail trip between Portland and Oakland/San Francisco at least once a year, more if I can get someone else to foot the bill.

>The worrysome feature of California is that it always seemed to be about 20 years ahead of the rest of the country in most areas of modern life.

That's why I moved to California directly I graduated from engineering school (where my major was electrical power generation and transmission) almost 45 years ago.

>That has at times seemed a bit scary.

That's why we moved to Oregon in 1999 - Oregon is what the good in California was 40 years ago, and alas is no longer.

```

Well Ed, KN7ENT was the first call I ever used on the air (in 1957). I chose it because it was not yet found in the callbook, and because my best friends name was KENT... :-)

>Does saying "personal" instead of "name" or "handle" really need to be a
>"social error" in the amateur community?

No it doesn't. In fact "personal" may become acceptable ham jargon in a few years. "Handle" which was once acceptable is starting not to be. Who knows why or how these social rules come about, but they are a fact of life. And those who insist on breaking them, either on purpose or in ignorance, should not be surprised if they are treated differently...

I recently moved to a large retirement community with thousands of people. When out walking just about everybody here greets you as you pass. But if I were to go just a few miles outside this retirement community to the nearest mall, and started saying hello to everyone I pass, they would likely be calling the cops on me for being a weirdo. Even making unwanted eye contact while driving on the freeway can cause you problems these days. Social rules don't make always make sense, but if you don't know them and/or don't follow them, expect some difficulty in life...

Last week I noticed a tag on a electric utility truck that said "If if isn't grounded it isn't dead". Good plan. HV can be insidious. We had a rural firefighting crew that got tangled up with a downed HT line that had fallen across a fence last year. Killed one and badly injured another. Real Bumnmer.

> Which one are you referring to?

The one at San Luis Reservoir, near Los Banos. A hydro plant is located there, as evidenced by the transmission facilities located there. I wasn't familar with the one at Oroville dam. When I have asked where the aqueduct originated the answer I always got was "The Delta".

Hydro is a small percentage of the total generated, of course. Here where there is a series of hydro dams on the White river it amounts to only 5 percent of the total. And here it's mostly used for peaking.

All very interesting and again shows that things aren't always what they seem.

I had noticed all that water moving south and, being from hydroelectric country, had thought that a lot of generating capacity appeared to be going unused. That made sense, given the cheap easy availability of power until recent times. And the big pump station and huge tubes headed up into the mountains south of Bakersfield sure look like power hogs. I wasn't aware that siphoning was an option.

You suppose the next promotion will be "Vote Yes on Juice"?

>

> no longer cost-effective.

We've visited the Calistoga Geyser, and I recently read a real short blurb in some news mag that caught my eye about a new geothermal generating facility coming online in that area of the upper Napa valley. It didn't give details. Looks like the increasing cost of fossil fuel may renew interest in developing geothermal sources, maybe on the east slope of the Sierras around Bishop? They seem to have lots of it in that area, if it doesn't blow first.

> The last Amtrak stop before Oregon is Redding, which is quite

We made the Coast Starlight run from the SF area to Seattle a few times when daughter and her family lived up there. Quite a scenic trip through the Cascades, and Mount Shasta is visible for over 50 miles. Really enjoyable.
Alas, the kids relocated to the Salt Lake City area.

> >The worrysome feature of California is that it always seemed to be

> engineering school (where my major was electrical power
> generation and transmission) almost 45 years ago.

Once that was an attraction. Today, no. Seems that it peaked.
We were in the Bay area for a week in late November. Flew into Oakland and drove out to Livermore. Traffic is unrelenting regardless of the time of day or night, and you don't drive away from it when you leave the city as you once did. It's everywhere, and it has steadily worsened over the 20 years we've been visiting there. We took BART back into the city for that side trip and left the rental car parked.
We didn't get out to Altamont Pass this trip, but in June when we were there the wind-gen-mills were going full tilt. I hadn't heard that PG&E was no longer buying their output. Evidently someone is.

Once we toyed with the idea of resettling somewhere in California in retirement, but have abandoned the idea. It appears the best of it is history. And if they don't get that power situation resolved the unpleasant future is now.

```
> >That has at times seemed a bit scary.
>

 That's certainly plain to me. Seems it was a wise move.

No, Nimrod. Or else some impatient sort will tell him that which he'd
have learned on his own if he wasn't such a clueless dip. They get more
than a good opportunity to learn. It's when they display skulls of
granite that the hammers come out. ANd you have no idea what kind of a
ham I am based on what happens here.

Cecil, you know as well as I, that any remark that anyone ever heard on a repeater gets expanded to suit the argument at hand. I have in the past condemned "radio cops". Not all polite corrections are critical to someone's ego, at least not to the point that a trip to the nearest shrink is needed.

Some here, on the other hand, feel that the slightest remark is an attack on the self esteem of the poor darling.

We have seen this same nonsense carried to the point if you paddle a kids butt, it is now child abuse.

You tripped a trigger on a project I am about half-surprised hasn't resurfaced lately. Back in the Nasser days the idea was to siphon water out of the Med thru the coastal mountains and flood the Qatar Depression in Western Egypt which is below sea level, recovering electric power on the drop, creating a second Dead Sea for the mining potential, and raising the humidity level in general behind the mountains.

May have been totally ridiculous (Gamel was good for the weird) but it sure wasn't because it would flood valuable real estate.

But baseball has rules, Fred. And nobody is advocating that anyone ignore the rules relating to ham radio. Instead, what we're talking about is simple, somewhat pompus, traditions (unlike "those" other people, "we" don't say "handle" in ham radio).

And, to me, it seems a little silly to make that big of an issue out of something as simple as this. If a tradition is that worth-while, it will survive on its own with only minimal encouragement. If it isn't, then we probably shouldn't be making an issue out of it at all.

And I certainly hope you're not judging the interest of others based on whether they use the same words and phrases you do. If so, then I have a problem because I don't know what you use when talking on the radio (these things seem to vary around the country). Can you send me a list of acceptable, and banned, words and phrases?

You know this whole discussion makes more sense if JC were a girl. There
isn't a lot of sense in being 14 and female if you can't be a snot.

Although I agree with Dick that new hams benefit from help from more
experienced hams, I was very fortunate; I received no help that has the "tone"
of some of the posts Dick has made here.

Perhaps Riley's recent statements about petty bickering can be applied to our
conduct off the air, too...

>They get more than a good opportunity to learn. It's when they display skulls
of
>granite that the hammers come out.

I have seen you take a hammer to people you don't even know, Dick; how do you know that all those hordes of people memorizing tests containing questions you have never looked at have skulls of granite?

>ANd you have no idea what kind of a ham I am based on what happens here.

Sure we do, Dick. You have described many of your on-the-air and VE escapades here, and, frankly, some of them appeared to me to have been pretty mean spirited. Do you really reserve such conduct ONLY for what happens here? Why would you feel that you don't feel to be appropriate on the air or in your in-person social dealings with hams is appropriate here? For most of the people here, what happens here is the only basis on which they can interpret and judge the worth of what you are saying.

I think I finally understand at least one of the reasons for your anonymity.
It is too bad that there are things in your life that you are ashamed to admit
to. An anon post here really doesn't get it off your chest...

>And those who insist on breaking them, either on purpose
>or in ignorance, should not be surprised if they are treated
>differently...

I am not surprised; I saw such conduct in grammar school and the same people
are still with us.

Are you defending it, opposing it, or just not really interested in it
happening other than it being an amusing topic of conversation here?

What the heck difference does it make if a new ham or an old ham says 10-4 over a repeater? When someone asks me, "QSL?", I sometimes say "10-4 Gud Buddy" with the proper quiver in my voice just for a laugh. People who ask, "QSL?", over voice personally drive me up the wall but this is a hobby, not the U. S. Marines. Why can't we have Elmers instead of Radio Cops and Drill Sergeants?

Attempting to cancel someone else's post is really, really dumb because:

1. 80% of the news servers now ignore cancel messages, due to past abuse;

2. Automated software run by usenet admins flags such cancel messages as "suspicious" because critical header elements don't match. Suspicious messages are published in a summary which is available to everyone;

3. 99% of ISPs regard rogue cancels as a violation of their terms of service and will terminate the account of anyone caught issuing such cancel messages.

So, if you only catch around 20% of the news servers, trigger software which records your cancels in such a way that you can be traced by your ISP, and if your ISP is among the 99% who will terminate your account for such activity, who is the dumb guy?

A pet peeve of mine is when someone is 20 over 9 on SSB and asks,
"QSL?" I usually say, "No, I don't have any QSL cards". :-)

>guess if a kid is learning baseball, you should not point out he is running
>the bases in the wrong direction for fear he will give up baseball?

>Give me a single reason we should be bending over and kissing some snot
>nosed kids ass ...

Is that the technique we can expect you to you when you "point out" that the young sportsman is doing something wrong? Would you at least do it privately, or would you think it best for "baseball" if you said that to him or her in front of the entire team.

Would you equally feel the need to correct him if his field "patter" used different words that the usual "swing, batter can't hit" or whatever words are in vogue with kids that decade? Isn't that a bit different than running the bases backwards? Now, if the ham had been using FM in the CW-only part of the band instead of choosing a synonym for name that you found offensive, perhaps more immediate action would have been in everyone's best interest.

Sorry, I will take "politically correct" over your verison of "building character." When I was a little boy, my mother never called it "policital correctness;" she called it "politeness," "manners" or "respect."

>If they are interested, I will bust my butt to help them.

Do you think the ham who studied almost 400 questions to get a license was "interested?" I sure hope that your help won't contain the words "snot nosed" or "kiss ass" over a petty "gaff" like "personal" instead of "name."

Frankly, I disagree with your assessment that not berating the new ham publically is bending over or kissing ass.

>then I listen to all the cock and bull about "how tough it is on the
>children to get a ticket".

Let's do a deja news search on the phrase you quoted. Care to guess what the one hit will be?

Some might feel using "snot-nosed kid" and "kiss my ass" in a post is also
childish nonsense.

>From: Dick Carroll dixie@townsqr.com

>No, but you sure would gently set him straight.

I don't think that the fellow who would use the terms "snot-nosed kid" and
"kiss my ass" in a post about it would be "gentle."

>And if he broke down bawling like a girl

Only girls should cry?

> because of it you'd set him on the bench at least

>until his tears dried.

If my public, verbal abuse of a child set that child to tears, I think I would feel that I should do more than set him on a bench until he recovered from the public humiliation I had subjected him to.

Besides, the more likely effect is that the kid would give up baseball forever. Some coaches would feel it was worth the price.

How would we feel if all of the CB newsgroup posts were cross-posted here? Do you think it would be disruptive?

Well granite would mean he was born with it. I personally
think he chose to solidify it around the time he "arrived"
and started resting on his rosy red laurels a few decades
ago.

Bullies invariably do their bullying in public, Ed, so as to strike
fear in the hearts of the multitude. Such people often put themselves
in a position of power over little kids because they are devoid of
power and respect among adults.

How could rec.radio.amateur.policy possibly be any more disruptive
than it already is?

>From: Brian Kelly kelly@dvol.com

>> The ultrawideband folks are saying... naw, never mind. :-)\

>TRY me!

The short of it is that UWB technology uses very short pulses that have a resultant "baseband" bandwidth of several GHz. The frequency range is in the 1-10 GHz area.

Some of the tutorial and article statements I have seen imply that UWB cannot be detected by radio receivers. True enough if the source is far away, but not so if the source is close. Depending on its modulation characteristics, UWB can produce discrete modulation sidebands or can sound noiselike.

See http://www.uwb.org/aboutuwb.html

for links to more information.

Its Dick's club.  Ask him.

Whenever I put on my "Dick Mask" nobody likes it.  I don't even like it.
 I just wanted to see if I can get the same pass he gets.

OK, I'll address your assertion that you want to hand select who gets a
radio license and who doesn't.  That isn't going to happen in America.
Its the very "Lodge Hall" mentality that Len has railed against but
everyone denies.  You are living proof it exists.

But who gets called on the carpet for KMA? These OFs get a pass until
someone else makes an issue. Then they often still get a pass.

OK, so no one seems to like it when I act like (a) Dick.

I'll go back to my old self.

73, Brian

No idea? None at all? If that were true, the only explanation is a
dual personality, like Jekyl/Hyde.

"...the hammers come out." Oh good grief. You tell us exactly the kind
of ham you are every day on rrap.

It goes back to the K3LT idea that even though we are (almost) all hams
here, the idea of amateur brotherhood and fellowship can only be invoked
with a cw key. Hans embraced it; Dick lives it.

73, Brian

Ed, I heard that. Now that my Dick mask is off, perhaps I won't be so
offensive and petty.

Here's to rational discussion!

Getting back to JLE and testing, I don't see why limiting the number of
times you can take an exam would be a problem. Does retaking an element
quarterly sound OK? Is annualy too long?

Also, Fred was advocating showing a log of contacts prior to upgrading.
Although a log isn't required to be kept anymore, it really does fall
back on good amateur practice (oops there's that silly idea again). Or
merely have a year TIG?

We'll find out damned quick, this debacle has gotten the attention of the whole country. Over here on the Right Coast the "I toldja so!" opponents of deregulation are up the butts of the whole contorted structure for answers by the numbers. "Thanks for the wakeup call California!"
>
Interesting observation about one big difference between how they play the game here and how it's played in CA: NJ and PA are two of the few states which did not force the estabablished utilities to shed their generating facilities. Forthwith they took advantage of the opportunity to divest their loser plants and kept the moneymakers. The loser plants appear to be making money now under their new management which was not possible when they were managed by their fossilized previous owners. I'm not sure if I'm still involuntarily subsidizing the Three Mile Island facility or not.
>
The PA Public Utilities Commission has come roaring out of the woodwork and is defensively bleating "Our new regime saved PA consumers 2 billion plus $$ last year, you lucky citizens! We done good, the temps are in the 20s & 30s and the lights are still on!" Thirteen cents per Kwh here or whatever it is the lights damned well better still be on.

For one obvious reason: There are no drop-dead regulatory incentives to upgrade knowledge and skills by getting on the air. So if ya don't wanna bother taking the apprentceship to get to be jouneyman you gotta take a jouneyman's-level exam to get the privs. I don't see anything wrong with that.
>

> The FCC is also not inclined to create a one-year, non-renewable license again,
> either.

>
Of course. I expect you'll agree that the FCC of those days was not the lame and disconnected FCC of today. In retrospect I suspect that what the old FCC actually bestowed on us amounted to a free pass onto the Novice bands for the "cost" of copying 5wpm plus passing the little ceremonial Novice writtens to get us into the game. That was carrot. So of course we all jumped in and got hooked. Then came the stick. Somehow I can visualize FCC thinking going something like "OK you little twits, we hooked you per our intentions, but if ya wanna stay on the bands you got 365 days to demonstrate to us that you took advantage of the opportunity we handed you on a silver platter to learn, upgrade or die". Typical thinking of those days. Today it's all carrots, sticks have become politically incorrect.

I think what happened was that when the repeaters got on the air and 2m became heavily populated the Tech license became a lot more attractive than a Novice

license for the same 5wpm code test. A complete reversal from the situation in the 50s when the there was very little VHF activity vs. the HF Novice bands.
>
Too bad; that simple 20-question exam for the Novice brought a lot of people

> into it. What surprises me is that even with the entry-level being at least an
> order of magnitude more difficult and more complex, growth continued.

>
Ham radio became a lot more attractive between 1960 and, say 1980. VHF opened up via repeaters and inexpensive solid-state xcvrs, folk in general became a lot more technology-oriented, all hobby activities expanded, lotta forces which are still out there today. Unfortunately it looks like desktop computing is now eating into our market for the attention of the kinds of folk who became hams in earlier times.

It's not the 4-page book in itself, it's the "serve the appreticeship or go thru tougher testing pushups" thing. A bit of pro-quid-pro in play.

I totally agree. Don't take the negative feedback here as what the
general ham population, or the FCC really wants. Remember - most of
these folks were against lowering the CW requirements. They are still
in the "block all change' mode.

Dick, it must have been traumatic. Do you recall if the police ops and
dispatchers who embraced the new 10-code were berated on the air?

How long did it take to make the switch over?

Brian

Who is the DUMBASS who can't read or tell the difference between a
cancelled post and a followup to a post that was a parody of a cancel.
Learn to read, Republican!

Actually it isn't much if any worse than the rest of that generation of far-end boat anchors plus it only runs 50w vs. the Valiant I and some of the WRLs which ran 200-300w. All of 'em tore up the neighborhoods. I'd test the electrolytics, hang a good low-pass filter on it and take it out for a short walk in a wink.

Based on the inputs I have received, I have updated my proposal for a new introductory license to more closely reflect traditional Amateur license regulations, with minor modifications to reflect today's changing dynamics.

At this point, I would appreciate more constructive criticism. I understand that many of you are against change of any kind - but you must have something positive to say, or their must be something you can think of to improve things.

****

Proposal to FCC to reinstate the Novice license class in the Amateur Radio Service - REV A

In the late 1980's and early 1990's when the current Amateur Radio Service Technician Class license was conceived and implemented, it was an appropriate alternate introductory license class. However, due to the recent elimination of the Novice Class license, and as a result of improving technology; the Technician Class license no longer serves well as the only introductory license, as it is doing poorly in drawing young members into the Service. As a result of license restructuring, it is now actually harder for young people to obtain an Amateur license than it was before restructuring.

In this critical era of global competition, especially in the wireless communications arena, it is essential that we provide a means for properly educating our young people in RF communications operation and theory.

Today, technologies like the Family Radio Service, high-speed telephone & cable modems, the Internet, and inexpensive cellular telephones, have overshadowed the privileges of the Amateur Radio Service, and made the requirements for young beginners to obtain a Technician Class license out of date. Additionally, the Technician Class license has now evolved into a beginning and ending point for most Amateurs now entering the service, who are mostly interested in VHF/UHF communications, rather than HF communications. Incentive licensing has virtually been eliminated.

The need for a Service dedicated to the goal of teaching young radio users proper radio operation techniques and etiquette can clearly be seen in the disarray present on the 11 meter Citizen's Band Service frequencies. The fact is, the Citizen's Band has become the defacto introductory service for young people just beginning to learn to experiment with radio; yet the Citizen's Band is a very poor environment for young people to be learning in.

Therefore, it is recommended that the Novice Class license reinstated in the Amateur Radio Service, with minor modifications to requirements and privileges to reflect the today's changing dynamics in radio technology and usage; and to expressly encourage young individuals to enter the Amateur Radio Service to improve their understanding of RF communications theory and operations, provide a healthy learning environment, and encourage radio experimentation.

On VHF and UHF frequencies, the privileges and restrictions will be the same as exists for the current grandfathered Novice Class license, with the addition of a small set of frequencies on the 70cm band, restricted to an output of 5W PEP.

On 70cm, Novice licensees would be restricted to voice communications on 5 20khz-spaced channels on 446.00, 446.02, 446.04, 446.06, and 446.08 Mhz; and digital communications up to 19,200bps on 1 simplex-only 60khz bandwidth channel on 446.14Mhz.

New Novice Class license holders would not have any privileges on HF frequencies.

Consistent with the implementation of the No Code Technician License, in which the existing Technician Class license holders were placed in a new class known as Technician Plus, existing Novice Class license holders would be placed in a new class known as Novice Plus. Novice Plus license holders would hold all the VHF/UHF privileges of the new Novice Class license, plus their existing HF privileges. Consistent with the manner in with Technician Class license holders may upgrade to Technician Plus by passing a 5wpm Morse Code examination, new Novice class licensees will also be allowed to upgrade to Novice Plus by passing a 5wpm Morse Code examination.

The new license class would have the following goals:

1) Encourage more young people to enter the Amateur Radio Service, by providing an entry-level ARS license class that includes privileges allowing reliable short-range voice and data communications.

2) Not significantly impact existing users of the affected Amateur Radio Service frequency bands.

3) Encourage basic knowledge of radio, electronics, operating principles and etiquette among a wider segment of the general population.

4) Take advantage of the success of the Family Radio Service, and provide a path for those young users interested in further radio experimentation.

The Novice license exam would consist of 25 elementary questions. Emphasis would be put on understanding the operational, technical, safety, etiquette and emergency questions that relate specifically to the new Novice Class license privileges. All questions containing calculations would contain small integer(whole-number) input values and have relatively small integer results. Novice licensees would be required to have a general understanding of Ohm's Law and Power relations. They should be required to have a general understanding of how antenna length relates to wavelength; and have a knowledge of transmitter power, antenna gain, transmission line loss, and the ability to perform a simple ERP calculation would be required. General knowledge of simple resistive circuits, and their power dissipation, would be required. New Novice Class licensees will need to have a basic understanding of digital communication methods. Consistent with the final form of the old Novice Class license examination, knowledge of capacitors and inductors would not be required.

I personally agree with holding on to the traditions. Instead of lowering the requirements to make it easier to get in, we should be making better study materials to make it easier to learn. No sense dumbing down. I'd love to write something like this myself, but just don't feel like I could doa good enough job on it to do itthe justice that it deserves.

The CB group!!! Which of all the groups listed would be the least interested
in this sort of post. I see that someone is continuing to cross post.
Amazing how dumb a person can be when there aren't multiple choice answers.

Stewart, there was not ONE post of support for your Colt class, and EVERYONE has stated and reiterated that the Technician Class is about the easiest license to get in Ham Radio history.

If I see your proposals with an RM on it, I can promise you that I will submit a vote of "no support" with the FCC, and in discussing this idea of a NEW license class with some of my local acquaintences, I can tell you there's no support WHATSOEVER for your proposals.

They are, at the BEST, weak. You forget that the people who will have to administer this "license" are the VE's, and they DON'T want to be bothered with a "license" that amounts to nothing more than FRS with more power and external antennas.

I can't help but think that you are fishing for SOME kind of support here, Stewart, but there's NONE. The Novice Class as it exists is all but dead and there is NO interest in reviving it.

The ARRL said no. The FCC said no. The commenting public in general said no. So what part of NO did you fail to comprehend?

More NG fodder is all you generated, Stewart.

I'll go with the "and others" because the the things Dick protested went
the other way in the restructuring. If Dick's protestations had any
effect at all, it was to illustrate the absurdity of his positions.

One staffer in a bureaucracy the size of the FCC is hardly big
potatoes... :-)   But I was responding to Phil's post about the
viability of ham witnesses for prosecuting ham violations in court,
and so my reference to the "Feds" meant Federal Court, not the FCC.
What do the federal prosecuting attorneys and federal judges think
about bringing ham violations to court? Not much if I understood
Phil's past posts correctly. The reason? They think that ham
violations are small potatoes. Of course Phil used more lawyerly
wording... :-)

Gosh Ed, the tone of your posts are starting to sound ominous. Have
things been going badly for you lately? I am not proud of some of the
wild things that I did as a teenager. However my bootlegging on CW
while waiting for my Novice license to come in the mail was certainly
one of the lesser of my infractions...   :-)

Ask about my escapades in my 49 Chevy sometime...   :-)

Not "block all change", Stewart. Almost everyone here was for SOME kind of change.

The "change" you are suggesting offers NOTHING. For only 10 more qustions on an exam than what you are suggesting, an applicant has access to ALL Amateur allocations above 50MHz, all modes, and up to 1500W PEP.

There are ELEMENTARY SCHOOL KIDS who ROUTINELY pass the Technician Class test. They typically pass the test with better scores and in fewer attepmts than adults. Based on your proposal, the "Colt" class offers nothing that FRS doesn't already offer, save for more power and bigger antennas.

Go ahead and "submit" you proposals to the FCC, Stewart. Then they can tell you "no" too.

I wish you guys would all go back to 3894.5 14.313 and 3.901
Not that I'm bothered by your postings, not at all !
```

It was just *alot more fun* listening to it live and in Technicolor on the above frequencies till R.H. stepped in and killed ham radio's Comedy Channel(s). How about ad least getting on every Sunday afternoon for a little radio fun? Shit, it would be alot better than listening to that screwball prozac-preacher's pontifications! (the guy who's so batty, he chose a vanity callsign similar to kv4"fz" retired call - unquestionable proof that this squirrel outside Atlanta is several bricks short of a load or one paddle short in his rowboat...)
Please? Just a wee-bit of the "good old days" of .313 ? Ad least until OTK gets back on and straightens the whole thing out.

Stew,

Here are my suggestions for changes to your idea.

License name: "Experimenter"
License term: 1 year, renewable four times in 1-year increments.
License test: 15 questions from current "Technician" pool.
Frequencies: All current and future amateur allocations above 30MHz.
Power: 200W output.
Modes: All authorized amateur modes.
Callsigns: From same sequential pool as current Techs and Generals.

I don't know; I thought of it as more of a funny that honest-to-goodness chain
yanking.  It was a joke because one of Dick's recent posts berated
granite-headed hams, you see?  Perhaps you missed it.

It would appear that you are the resident expert chain-yanking analyzer; can
you help by explaining the subleties to us?

Thanks.

Ed

I don't think much of bringing ham violations to court, either, Aaron. If all amateur rules violations were trundled into the court system, I wonder if any rules changes would be the result?

that.

Nor do I. Although I believe that the details should be improved, I think the growth of the Amateur Radio Service in the days since that very simple entry-level test was replaced by the more complex VE Novice or Tech tests demonstrates that the tests never needed to be that simple.

>Today it's all carrots, sticks have become politically incorrect.

I have never felt hit by a stick at any point in my ham experiences. At all times, whether I entered ham radio and whether I continued it by upgrading was, and still is, voluntary. IMHO, it runs past the "mores" of today; hitting prospective hams with a stick is not the best way to get them to participate.

>Unfortunately it looks like desktop computing is now eating
>into our market for the attention of the kinds of folk who became hams
> in earlier times.

Perhaps so. Although surfing the internet is no more than appliance operating in any sense of the word. Some of those who may have become hams could be attracted to some of the web-application programming things, but that has been a "challenge" to us, albeit in a slightly different form, ever since the first home computer was available. I think that we can take the growth rate of amateur radio over that time as an indication of its relative appeal.

>>I don't think I would be a ham today if someone had handed me a 200+
>>page study guide and told me that this is what I had to know to be a beginner

>>in ham radio. And if they then told me that it was "dumbed down" from
>>that 4-page book THEY had to read...

>It's not the 4-page book in itself, it's the "serve the appreticeship or go
>thru tougher testing pushups" thing. A bit of pro-quid-pro in play.

Perhaps, but even in 1963, it was not necesary to be a Novice, or even take the Novice test, before being a General and earning all amateur priveleges.

Well it may be time to upgrade. Ignorance is no excuse. Isn't that what I
hear preached regarding FCC rules and CB's?

>quarterly sound OK? Is annualy too long?

The FCC used to require 30 days, if memory served. Of course, it was almost always more than 30 days between test sessions in any particular city. I could live with that. I would support a rules change that required a reasonable waiting period between retests of a failed element.

>Also, Fred was advocating showing a log of contacts prior to upgrading.
> Although a log isn't required to be kept anymore, it really does fall
>back on good amateur practice (oops there's that silly idea again). Or
>merely have a year TIG?

It has been over 20 years since the FCC dropped the logging requirement. Can we trace any problems in the Amateur Radio Service to the lack of logging? Since I have been a ham, showing a log of contacts has not been a requirement to obtain a license that grants all amateur priveleges. When I was a General, renewal required, if memory serves, that a ham make a statement that he or she operated a minimum number of hours. There was also a "time in grade" requirement to upgrade to Extra, but I already had all priveleges, so I felt little or no need.

I don't think any individual could. What you can do is to send your input to the QPC about what material in the tests you don't believe to be relevant, what needs to be improved and as much of the work as you CAN do justice to. They are working on the Extra questions right now, and have asked for input. If you and I are not smart enough to do it, let's not leave it to the 3 QPC folks to do alone. We won't get as good a result as if we all chip in.

So now you'd hold me to keeping constant watch on upgrades to the question pool? You seem more than willing to just ignore anything that is negative. I stated that if there are any substantial percentage of questions in the pool such as the few you posted then that shows some imoprovement in things. It doesn't mean that the system has been overhauled.

>

Really? Could I ask you to review some of them here so that I might consider them for change? I KNOW that is incorrect and blatently false and your stature has just dropped considerably in my view, Ed. On the other hand I'd imagine that of Burke & co. has improved accordingly, so your mission may be showing some signs of success. It is particularly offensive that you should assert that my "escapades" as a VE to be meanspirited. That is as false as any prevarication ever has been. In EVERY instance of any issue whatever I ALWAYS went as far in favor of the applicant as the rules would allow in their most liberal interpretation, and I would fully invite anyone to simply ask any applicant who ever tested with my team that question. That attitude cost me a lot of extra work since many applicants travelled long distance to test with our team, having heard of our astute fairness as opposed to other teams who were not.

The fact that you would make such an assertion without any even marginal evidence is revealing. You evidently want to cast me in a negative light for puposses of advancing The Agenda. OK, so be it. I can live with that,m false as it is. I know how much of an outright lie it really is and that is sufficient.

> Do you really reserve such conduct ONLY for what happens here? Why

> would you feel that you don't feel to be appropriate on the air or in your
> in-person social dealings with hams is appropriate here?

Do you really have to ask??? After the drubbing the Freebanders posting here have laid out on anyone who supports any sort of code test? There is no doubt of it, therre are many llcensed hams who are also Freebanders. It's a fact often proven by the FCC. You think they just keep quite about the code? Some of them have even obliquely admitted it right here.

What you are doing is demonstrating clearly the future planning of the League, whether you know it or not. The policy fo the League is becoming more and more clear as all this progresses. Yes, it may be your personal opinion. That doesn't mean it isn't also that of officialdom. It more clearly shows that it is.

For most of the

> people here, what happens here is the only basis on which they can interpret
> and judge the worth of what you are saying.

Well what I am saying is not obscure. Hams should have sense and initiative to get to know ham radio and what it consists of, rather than just bringing only their own wants and wishes and forcing the rest of the hobby to conform to their wishes. But that is far to out of touch with the PC world of today. The league is falling right in line in the ongoing effort to keep up the bottom line. So be it.

You are missing many things. Cross-posting is for brain-dead people that have a over-emphasized imagination that their opinions should be transmitted all over the world. Just post it where it belongs. the alt.family.radio newsgroup is really an FRS newsgroup. FRS is NOT a hobby radio service. If you don't understand the word "hobby" as it pertains to radio services, have someone explain it to you.

Condensed version: Cross-linked messages are lame. FRS is not a hobby service.

Unfortunate truism demonstrated by a few in here.

That may be the source of the continuing mantra of "getting
the young involved in amateur radio."

Such are at a loss to handle adult major-league players
from another "club." It is easy to cow children, to belittle
them. Gives them a feeling of Power, of Control, of
Turf Ownership. Doesn't work with adults not intimidated
by their self-professed "superiority."

>How'd you get it? VFO included? Might be worth some bucks.

I had to do a web search for the item due to lack of memory on
anything but the name. :-)

Designed (!) in 1947 for "'all' the amateur bands," it looks like
a classic kluge with a front panel layout straight out of 1930.
Using an 807 as a final "on up to 148 Mc [sic]," it probably
has zilch efficiency above 30 MHz.

Messrs Harvey and Wells never produced a receiver according
to the website and the company ceased in 1960. They never
produced any SSB transmitter...explaining some of the lack of
product recognition.

If this particular product is so wonderful that it becomes a
notable exception to a general rule, then I would think that

some ARRL Lab moonlighting with test equipment can exemplify its bona fides as an "all band" transmitter.

Boatanchor stuff is nice nostalgia material. Long-timers can wax enthusiastic until the sun shines brightly on the polish but very little of the old stuff can glow visibly against the brilliant light of newer, state-of-the-art equipment.

It might be easier to think of it as "ultimate" DSSS.

\>Some of the tutorial and article statements I have seen imply that UWB cannot
\>be detected by radio receivers. True enough if the source is far away, but
\>not so if the source is close. Depending on its modulation characteristics,
UWB
\>can produce discrete modulation sidebands or can sound noiselike.

That assumes that only narrowband, conventional receivers are used to monitor the wideband signal. The RF energy is literally spread so wide across the baseband spectrum that the energy in a tiny fraction of the spectrum is very low.

You cannot really explain this "UWB" without first going through a tutorial on direct-sequence spread spectrum basics. The narrowband concept of radio is too fixed in most minds to accept UWB immediately.

1947 was a pivotal year in radio-electronics. Not only did Harvey and Wells come out with their multiband transmitter [:-)], but the transistor was invented and a young genius named Claude Shannon came up with the relationship of noise, bandwidth, and information rate. While the rest of the radio world followed "Shannon's Law," amateurs were seldom aware that it applied to amateur radio. That may be because Shannon started off using TTY as the base for his analysis. Everyone (well, most...) "knows" that amateur radio is all about CW on HF, therefore anything that started off with TTY in 1947 can't be any good....   :-)

Jim may have taken an oath to defend and protect the constitution against all enemies, foreign or domestic at some time in the distant past. I don't think he realized the gravity of that oath. And unless he's revoked it, it probably still stands.

Imagine Jim trying to call CQ with three missing front teeth. Give him a pass on that self inflicted beating. Brotherhood and fellowship and all that feel good stuff in DeSoto's paper.

>

And here we come to the point of my argument. There is much more to being a ham than being a Novice. The Novice ticket should be what it was meant to be- a quick entry level ticket that allows one to do the investigations and polish their craft with hands on experience with other hams before graduating to far greater priveliges as a real ham. The Code requirement was much more fun and doable with others to practice with, and one would obtain much of it in the Novice bands.

The Tech license questions I do admit are not technically simple, however the testing proceedures have been greatly simplified to the point of instant gratification and conveys "all the priveleges that anyone would want" in a day or two without requiring any further advancement in the craft. In my opinion, an attractive dead end that completely invalidates incentive licensing and the "Basis and Purpose" of Amateur Radio.

You must admit this had the effect of splitting Amateur radio into two factions; The Techs who felt there was really nothing more to ham radio, and the rest who wondered why these people didn't want to join the Ham fraternity (which seems to be almost gone now except for a few that remember what it was like to just be hams).

In my opinion, there should be a "beginner's" ticket that is restricted in band priveledges and only good for a year or two, that requires on the air experience and some further investigation (maybe like elective merit badges?) before upgrading and being accepted into the mainstream.

Let's face it; in order to be accepted as one of the crowd, you at least have to have something in common.

Also, I not accept the notion since we are all born "equal in the eyes of GOD" that we are all the same and thus should be able to have anything we want. If that made sense, how come I'm not a Millionaire? I really want to be a Millionaire but no one will give me a million dollars! It's just not fair! Of course the fact that I'm not much good at making a million dollars should have no bearing...

Jim, ac6tk

Chip?  Because you cannot provide a single rational argument to keep the
code, we have a chip?  The FCC agrees, so the FCC must also have a chip.

Now the ARRL asks yet again to substantiate keeping the code
requirement.  I hope you don't trot out the same lame excuses.

Don't look now, but you fell into the trap again. Wasn't your original jeer about people who can't read? So far, yours are the ONLY posts showing up in the news.admin news groups, where the Usenet admins hang out, and that was due to your own gaffe (Note to others: the word is not spelled "gaff", as was done in another thread).

I do have to admit that your command of English is impeccable, though. It fits you well.

Mr. southpark,

Then I suggest you go over to rec.radio.cb and find those "troublesome" posts by me. There IS a lot of controversy over there and you need to concentrate your smart remarks towards Aaron Voobner, Mr. Scott, et al.
I am not involved, mister.

Richard,

I tend to agree. While he/she may have a valid "legal" point, I can't help but notice how *badly* kids are treated these days. You know, the "necessary" car at 16, money to buy huge amps for their stereos, pagers, cell phones, more money to "slam" their cars, put funky lights underneath them, hydraulics. I mean, what's 20 grand these days? My, my, how badly they are treated! I hope we never have another depression to contend with. What would they do without all those "necessities"? To see the most recent generations deprived of such would scare me to death. Really! How would they react to having to WALK to school or (HORRORS!) ride a school bus, do without a cell phone, or a phone altogether. Tragic.

The sad thing is, that the abundance of "things" and electronic media has helped in the decline of education. I mean, when it seems that everything is just *there* for the picking, why does one need an education? For the kids coming up today, they have no concept of hardship or the inability to get a decent job. It's all out there, right? They have never really had to work for anything--not all, but most. Parents just hand out money and goods. Instead of coming home from school, and feeding the chickens, gathering eggs, slopping the hogs, watering livestock, many come home to an empty house, a pop-in pizza, and Nintendo. Anything the kids do is OK, and don't the teacher DARE try to keep order or respond to impertinence. It would seem that the rules require that if a teacher comes under attack, he/she must stand there and not dare defend him/herself. I'm glad that I didn't do what I started to do for a career: English teacher. I wouldn't have lasted long in today's environment! The first time a kid attempted to smack me, he'd better have filed a flight plan, cuz he'd be going for a short "flight"! LOL! So my career choice (railroad) was the better one!

Cell phones in school? I may be missing something, but I don't see the

need for kids to have them at school. Again, the person *may* have a
legal gripe against the school. However, I wonder if it is a matter of
resolving a legitimate gripe, OR just a way of one-upping "authority".

Jerry

I would certainly hope that the League advocates brotherhood and
fellowship among amateurs, rather than constantly berating newcomers and
beating on them like red-headed stepchildren.

No Dick, you're absolutely right. The best way to ensure the future of
the ARS is to stomp the life out of any new person who'se learning the
ropes or has any new idea. After all, they must conform to your wishes
and your wishes only. To hell with simply operating within the scope of
Part 97.

By the way, if you're not in the ARRL Lodge, what Lodge are you from?

Welp, JLE had his chance to comment on the nprm or whatever it actually
was several years ago.  I wonder what his comments were.  He's welcome
to propose his changes, but I don't think the FCC will entertain his
Lodge entrance requirement to the amateur service.

Addendum to above:

HF Priveleges:   Applicants who also pass a 5WPM Morse code exam would
                 have HF privs equivalent to current General licensees,
                 subject to 200W power limitation.

So your opinion is that when a CBer gets a minimal ham radio license and brings his entire repertoire with him, steadfastedly refusing any hint of change by way of dropping at least most of the "ling" and sort of rubs in everyone's face, then we hams should just shrug and give it all up. We see. You're beginning to look like a limp noodle yourself.
I know of two meter repeaters which have been abandoned to them, and the hams just moved and put up another repeater. If you think I'm the only ham who sees it this way you're head is deep in the sand.

Dickie, you can always move to Los Angeles. No problems
with LA municipal Department of Water and Power
electricity. No outages, no shortages, ten cents a KWHR
for residences. Good future for LA.

Of course, there's earthquakes here. But...you know all
about earthquakes, once reading a book on the subject.

On the other hand, maybe you could "reactivate" that CW
net into the LAPD...you know, the one the LAPD didn't
know about until you "revealed" it to everyone?   :-)

>The Tech license questions I do admit are not technically simple,
however the testing proceedures have been greatly simplified to the
point of instant gratification and conveys "all the priveleges that
anyone would want" in a day or two without requiring any further
advancement in the craft. In my opinion, an attractive dead end that
completely invalidates incentive licensing and the "Basis and Purpose"
of Amateur Radio.

And the "Basis and Purpose" clause, 97.1 leads me to wonder how CW mode
could be considered invalid.

If we stop to consider that CW only requires the least expensive,
simplest to construct and is completely compatible with SSB reception,
while being more reliable in terms of signal to noise ratio, how could
it be that it has been banned for ships at sea and from other
government circuits that claim to be for Emergency back-up?

Perhaps a ship at sea that cannot afford (or maintain) Satellite linked
e-mail and weather fax is not worthy of rescue?

How do they resolve this inconsistancey?

Perhaps if there were at least a code test for SOS, the point would be
made.

Jim, ac6tk

>What, for bringing any mention of your anonymity into a discussion?

Do you think that my conduct would improve if I gave my call? Do you doubt that I am a ham? And if I were not a ham would it make a difference? Are you proud of the way some of the call letter identified hams here represent themselves and ham radio? Isn't it better to judge a person by his conduct and ideas rather than by whether he has call letters and/or is willing post them or not? We have discussed my anonymity here ad nauseum. That's not a problem for me. Continue the discussion as long as you like. I will respond to any and all of your concerns. But all of the answers can be found in deja.com many times over...

The ominous tone of your post that I was referring to was your use of the personal comment: "It is too bad that there are things in your life that you are ashamed to admit to." How many things in my life do you know about that I am ashamed of? And if I won't admit to them how do you know about them? And why is it too bad? That was simply a personal attack Ed, plain and simple. As I said, that's not like you, some others here maybe, but not you...   :-(

I love it when clueless people try and tell other people how to live their Usenet lives. They have been the same for many, many years.

You clearly have no idea about the history or the intent of Usenet, and

you sure as heck don't realize why crossposting was invented at the
outset of Usenet.

I'm not going to bother to tell you why crossposting is STILL
necessary. You should have read the FAQs by now.

Clueless? I simply stated that those who cross-post are nimrods! Has
NOTHING to do with the mechanics and history of the usenet.

My proposal to eliminate any requirements for a license will obviate any need for a colt class.

Besides I am still upset that my last submission, while being assigned an RM was not adopted.

Dwight, as I posted earlier, I don't care what words you use as long as they
are ones that a person would say in front of their mother (assuming she is
not a Jerry Springet reject)

My objection is to the over sensitive, feel good nonsense that ANY criticism
is bad and will cause the little darling to fold up their tents and go home.

I could be wrong, but it is doubtful I said A**, I most likely said
hindparts or butt as is my usual response. I do indulge in the occasional
"piss me off", but I cringe as I write it.

No Brian, I have reevaluated my position. You. Ed, and Cecil have convinced me I need to be a sensitive 90's kind of guy. This caused me to create "No Hassle International". My goal is now to remove any restrictions that a newcomer may find demeaning, hazing, or might have a chance, no matter how slight, of damaging their self esteem.

I am now on a holy crusade, With the FCC's help, we can set up tables at the mall and pass out Extra Class licenses as people walk by. We are guaranteed growth and many new young people to keep Amateur radio alive.

I thank you all for causing me to realize my insensitive ways. How could I possibly be such a dolt as to expect anyone to learn something, and treating a radio service that everyone has a "right" to as a privilege. Mea Culpa Mea Culpa Mea Culpa.

If only I can receive the absolution from all the CBers and children, I have caused any moment of agony, I will sleep so much better.

>of rubs in everyone's face, then we hams should just shrug and give it
>all up. We see.

No, my opinion is that there is no reason to publically berate a new ham
because he doesn't choose exactly the language you would use.

Do you really see things in such extremes, or do you blow them up out of
proportion because you believe it makes your point.

>You're beginning to look like a limp noodle yourself.

A petty insult that does not make your point, either.

>I know of two meter repeaters which have been abandoned to them, and
>the hams just moved and put up another repeater.

Are you really telling me that a group of hams put up a repeater, found it taken over by "them" and so they put up another repeater, and just gave the first one away? Sounds like another exaggeration to make a point to me.

> If you think I'm the only ham who sees it this way you're head is deep in the sand.

No, I do not believe that you are the only ham who believes as you do. I do believe that you represent only a relatively small number of hams. I don't believe that most hams think that because I have an opinion that it is inappropriate to publically berate a newcomer over a minor point that I am advocating letting vast hordes of CBers run over ham radio and use CB lingo on the air instead of ham lingo.

Restructuring would have been an ideal time to bring up the issue. I haven't read every comment; the lack of a waiting period may have been brought up by someone. It would appear that either hams didn't think it an issue or the FCC didn't think there was any problem that needed solving.

I guess the doom-and-gloom contingent is down one point on this one. :-)

>From: xjim@my-deja.com

>And here we come to the point of my argument. There is much more to
>being a ham than being a Novice.

Yes, and there is mouch more to being a ham than being an Extra, too.

>Novice ticket should be what it
>was meant to be- a quick entry level ticket that allows one to do the
>investigations and polish their craft with hands on experience with
>other hams before graduating to far greater priveliges as a real ham.

The Novice ticket was not that in 1963; it was quite possible to skip the Novice, and the Novice test altogether and get a General. A drive to the FCC office, a written and code test, a three week wait for the license and instant priveleges, No need to graduate -- one could be there -- 1963.

>The Code requirement was much more fun and doable with others to
>practice with, and one would obtain much of it in the Novice bands.

Yes, they would. Now, have the pro-code folks in 2001 been making it sound

like it is fun and doable?   >The Tech license questions I do admit are not technically simple,
>however the testing proceedures have been greatly simplified to the
>point of instant gratification and conveys "all the priveleges that
>anyone would want" in a day or two without requiring any further
>advancement in the craft.

Just like it was in 1963. One could take the Tech or General with no previous experience.

>In my opinion, there should be a "beginner's" ticket that is restricted
>in band priveledges and only good for a year or two, that requires on
>the air experience and some further investigation (maybe like elective
>merit badges?) before upgrading and being accepted into the mainstream.

Did you make this suggestion to the FCC? What did they have to say about your comments in the Report and Order?

>Let's face it; in order to be accepted as one of the crowd, you at
>least have to have something in common.

Man, the things we have in common are so much more than our differences that I don't even know where to begin.

>Also, I not accept the notion since we are all born "equal in the eyes
>of GOD" that we are all the same and thus should be able to have
>anything we want.

I do believe that we are equal in the eyes of God, but that means that we have an equal opportunity to live the path that has been placed before us. I don't know anyone personally who believes that we are all the same and thus should be able to have anything we want. This seems to center around this forum; can you tell me who you think believes this way and whether you think that their belief is held by a majority of hams?
>If that made sense, how come I'm not a Millionaire?

Perhaps you could ask the God you cited in your post.

>I really want to be a Millionaire but no one will give me a million
>dollars! It's just not fair! Of course the fact that I'm not much
>good at making a million dollars should have no bearing...

Oh, now I think we know who believes this way. :-)

>If we stop to consider that CW only requires the least expensive,
>simplest to construct

What percentage of CW operation do you think is carried on usign the least expensive, simplest equipment vs using the new-fangled, microprocessor controlled transceiver?

>while being more reliable in terms of signal to noise ratio, how could
>it be that it has been banned for ships at sea and from other
>government circuits that claim to be for Emergency back-up?

I lack your expertise in determining what emergency equipment should be on ships, but in my humble opinion, they probably make the choice in terms of reliability. If I were on a sinking ship, I would trust that they would have a satellite rescue system instead of a 500-kHz Morse transmitter.

>From: lenover21@aol.com (Len Over 21)

>It might be easier to think of it as "ultimate" DSSS.

That would be a reasonable analogy.

>>Depending on its modulation characteristics, UWB
>>can produce discrete modulation sidebands or can sound noiselike.

>That assumes that only narrowband, conventional receivers are used
>to monitor the wideband signal. The RF energy is literally spread so
>wide across the baseband spectrum that the energy in a tiny fraction
>of the spectrum is very low.

Yes, it is very low, Len, but very low can be used quite effectively for communications. Run a few calculations. Start with 30 dBm UWB spread over 1 GHz bandwidth, 10 dBi antenna gain on transmit, 20 dBi antenna gain on receive, a 6 dB receiver noise figure, a 1 kHz receiver bandwidth and a frequency of 1200 MHz and a separation of 0.1 kM. The result is:

```
Frequency =  1200 MHz
Total transmit power =  1 watt
Transmit spread =  1000 MHz
Receiver bandwidth =  1000 Hz
Transmit power in 1 Hz = -60  dBm/Hz
Transmit power in 1000 Hz = -30  dBm
Transmit antenna gain =  10 dBi
Receive antenna gain =  20 dBi
Distance to receiver =  .1 km
Free-space pathloss = -74.03362 db
System loss (path loss +/- antenna gains) = -44.03362 dB
Total loss (path loss +/- antenna gains - spreading loss) = -104.0336 dB
Specified receive system Noise Figure =  6 dB (includes external noise)
Calculated receive system sensitivity in 1000 Hz bandwidth = -138 dBm
Received noise in receiver bandwidth = -74.03362 dBm
Received noise in receiver bandwidth = S 9
Receive system noise floor increase in dB =  63.96638 dB
```

Put that UWB transmitter on a good location and go out to 10 kM and you are still hearing -114 dBm in a 1 kHz bandwidth narrowband receiver under the conditions I stipulated.

Put a 0 dBm UWB transmitter in the house next door, 0 dBi gain antenna, 30 meters separation and you receive -104 dBm under the stipulated conditions.

I am not necessarily advocating that UWB should not be allowed, but the oft-cited lack of interference because the signal is spread out over such a wide frequency range does not mean that it won't be heard by narrowband receivers.

I agree. If I am going to do any moonlighting with test equipment, it will be to compare the Elecraft K2 to an old Collins S line receiver. I will wager that famous lobster dinner if I get to pick the side I want to be on. :-)

I am serious as a heart attack, as I posted in a message to Brian. You, Brian and Cecil have made me change my ways, I am now a new sensitive creation of the 90's. I spend every minute seeking absolution for my old ways that erroneously thought rewards should come from effort.

Little did I realize that I was simply building monuments to my own ego by depriving someone of what they wanted simply because I worked to gain the same privileges.

I have seen the light, and as soon as the FCC sees things my way, I will be the first to set up a table at the mall to pass out Extra class licenses to any and all that want them. Our ranks will swell and Amateur radio will be saved.

We don't need no stinkin' colt license.

Saying it is out of date is one thing..it is also the one thing that you would have to expand upon and "prove" to the FCC...

Black helicopters full of jack booted thugs are on the way. They are
equipped with an ARRL mind control device. You will soon learn
what becomes of those who expose the PTCA. Resistance is futile.

OOOOOPPPPPS -- BREAKING NEWS FLASH!!!!

Due to recent budget cuts at ARRL headquarters there are no longer
any black helicopters or jack booted thugs on the ARRL payroll. Also,
the mind control device was recently reposessed by the Newington bank.

I looked closer at the Elecraft web site after I made this post and
discovered that I was in error. Apparently they don't offer this amp
option yet. The specs list says it would be available in Q4 of 2000
but it's not yet on the price list. Too bad because 50 watts would be
ideal for all around CW operation...

I'm sure there are some of those folks around. Perhaps they are contributing in some of the other "Basis and Purpose" points in 97.1.

Do you think they are harming the Amateur Radio service if they get involved in ARES, Skywarn and similar endeavors -- 97.1(a)?

Do you think they are harming the Amateur Radio service if they concentrate on advancing the communications phase of their skills -- 97.1(c)?

Would they harm the Amateur Radio service if they participate in SET or Field Day, or local drills to expand the reservoir of trained operators -- 97.1(d)?

Is there some harm to the Amateur Radio service if they are involved in DX ragchewing and make some friends with folks from other cultures -- 97.1(e)?

Or is anything other than technical topics harmful to the Amateur Radio service?

Steven J Robeson, K4YZ <k4yz@my-deja.com> wrote:

> If you read the basis and purpose of BOTH Citizen's Band (of which FRS is part and parcel of) and the Amatuer Radio Service, you would NOT find the word "HOBBY" in either, yet both are used for that purpose.

Steve, being an amateur radio operator, I think you know what is meant by hobby. With amateur radio, you may experiment by building your own equipment, toy with antennas and try numerous means of communications. The FRS and CB services are NOT set-up with these luxuries. They are not a hobby service in the sense that amateur radio is, but rather a consumer oriented radio service where you purchase and make no modifications to and transmit as intended with "off-the-shelf" equipment.

Please explain how that's different than "an armed response by
law-abiding citizens..."

Don't look now Larry, but they fought for all Americans. Whether it
helps your debate point or not.

> >Right. So as long as it's a group you happen to agree with, it's

But you're not the judge, Larry. You're not A judge. You don't get to
decide when armed rebellions are legal and when they are not. You can
pretty well figure that none of them are.

> If you are not, then I can understand the problem you're having in understanding
> my post.

I understand it perfectly. I'm just not as narrow minded as you are.
It is you who doesn't understand that you are wrong. You might wanna
check with your dad the attorney about whether it's legal for people to
stand on the steps of the Capitol with guns. Let us know what he says
about that.

What's wrong with having good operators? They're more valuable than
I am during emergencies.

Ahh, but CB radio DOES allow external antennas, and the fact is MANY
people ARE using it as a hobby. My opinion is that it is a very poor
place for kids to be learning about radio.

I wonder if you mean the oath issued by the United States Government.
Larry is talking about taking up arms against the government. Wouldn't
committing treason violate the oath?

The fact that I never took one doesn't make feel less obliged to support
my country.

The equipment is commercially available at a reasonable price. Many of the
kerchunkers also actually operate the repeater, enabling one to capture the
fingerprint of the miscreant, then compare it to properly ID'ed signals.

Say Ed, I was wondering, is there any way of getting transcripts from the proceedings that lead to restructuring? My understanding is that there were folks that had concerns about the elimination of the Novice Class license. Is there any way to know how close "the vote" (or general sentiment) was on this particular issue. I don't want to go barking up the wrong tree, you know - but I've got a hunch that there is some support for something that will set up a more healthy learning/operating environment for kids. Why would the FCC have recently created FRS, and now MURS, if that were not the case?

I don't have a big problem with MURS becoming the defacto
experimentation Service for youngsters; but I think they WOULD be
better off with something like what I am proposing.

Urban legend and Grand Canard.

What the sign on I-5 just south of Salem (the state capitol)
says is: "Latitude 45 degrees. You are halfway between the
Equator and the North Pole"

Maybe you were thinking of the sign that says:

"Keep Oregon Green. Bring Money."

Maybe you were thinking of the (legendary) sign at the entrance
to San Diego, long a hotbed of crusty old Republican retired
Navy brass:

"Welcome to San Diego. Keep Right."

  LAPD wasn't the California node - CHP Sacramento was.  I saw
  the station in 1963 but it was out of service by then.

>Some of the tutorial and article statements I have seen imply that UWB cannot be detected by radio receivers. True enough if the source is far away, but not so if the source is close. Depending on its modulation characteristics, UWB can produce discrete modulation sidebands or can sound noiselike.

As I used to preach to those in the Wireless Communications Alliance who though that the spectrum can accommodate an unlimited number of "unlicensed" devices, take a good look at the "unlicensed device" spectrum with a spectrum analyzer and you will see a profile view of a brick on a plate.

"Wanna' tell me that no one knows that it's there?" <ggg>

The reason that the FCC specified "simple formats" for amateur and early commercial spread spectrum was that they could be df-ed with the equipment which we had in hand. When we got newer stuff, the specs were relaxed somewhat.

The Northern Californians and New Englanders (to some extent) were/are hobbled by the mighty Pave Paws (frequency hopping radar) system on the 70 cm band. USAF-SAC, my erstwhile employer, claimed that receiver AGC and squelch response times were much longer than the dwell time on any discrete frequency so it shouldn't be detectable.

"How do you explain why my Motorola Micor squelch trips every time?"

And so on.....

Nope, I saw it with my own eyes a number of years ago. I just don't
remember exactly what it said or exactly where it was. It might have
been a private leased billboard.

NO! REALLY! I didn't know that. I guess that is why my CB wouldn't put the "foot" on anyone! GEEES!

A great place for kids to learn about radios IS the amatuer radios service AS IT IS CURRENTLY STRUCTURED! The Technician class can be obtained by most any 12 year old and many younger. A give-away ticket to "kids" is not teaching them anything!

Whether people are using CB as a hobby service or not is irrelevent. It was never intended to be such. FRS service is not a "hobby" service. It is a consumer service much like cellular. All these screwball attempts to expand the FRS service or deminish the amateur service are perpitrated (sp?) by people with delusions of grandure.

Get over it! The FRS service is fine the way it is...The Amateur service is fine the way it is...The CB service should be nuked!

Do you consider the current Technician license an unhealthy
learning/operating environment for kids?

Is there no way to make you happy? First I support the CW position and you tell me how wrong I am, and that I am being elitist.

After you have turned me around, and brought my sensitivity to the forefront you doubt me.

My self esteem is ruined, I may never send another dit or dah. With my new sensitivity I am setting here at the key board weeping.

Have you no pity?

Yes.  Since this paragraph is the basis for the proposal, it needs to
be strong.  I will be looking at ways to improve that paragraph

I know that there are some of those folks around. Namely me. I have
really done little but to operate in the last 30 years or so. I left
the electronics industry in 1968 and have not kept up. The electronics
I learned as a ham in the 50's, and in school in the 60's, and which
employed me at Motorola for several years, still serves me well for
hooking up a ham station in 2001. If my rig broke in the 50's or 60's
I could fix it no matter what. Now if it's not a simple problem, it's
back to the factory. But then how is that much different from most
hams these days...

There are several problems with this proposal:

1. As a 15 year old, I can tell you that the most interesting thing of ham
radio is DX, not short range VHF communications.

2. This proposal would isolate the newbies, if there are not any other recent "Colt" licensees around, they would quickly grow bored and would not upgrade. Chatting with people who have been around a while and who are talking about the Walk-a-Thon or picnic the local club is involved in or the great conditions on the HF bands today.
3. The Tech license is already extremely easy to get. I got my Tech just over a year ago and it took about a week to study enough to pass the test, and that was with 55 questions on two tests, not 35.

While I agree more young people are needed in the hobby, the problem is not the license structure, which I believe to be perfect, it is the PR deficencies.

> On the 70cm UHF band, Colt licensees would be restricted to voice communications on 5 simplex-only 20khz-spaced channels on 446.00, 446.02, 446.04, 446.06, and 446.08 Mhz; and digital communications up to 19,200bps on 1 simplex-only 60khz bandwidth channel on 446.14Mhz.
>
> On the 1.25m VHF band, Colt licensees would be restricted to voice communications on 5 simplex-only 20khz-spaced channels on 223.42, 223.44, 223.46, 223.48, and 223.50 Mhz; and digital communications up to 19,200bps on 1 simplex-only 60khz bandwidth channel on 223.56Mhz.
>
> To encourage experimentation/understanding of antenna and VHF/UHF RF propagation theory, Colt licensees would also be allowed to setup and/or operate through a VHF/UHF crossband, simplex user input/output, repeater station on two 20khz-bandwidth channels on 223.52Mhz and 446.10Mhz. This would allow them to setup an inexpensive repeater system by interconnecting the voice/mic connections via a resistive circuit on two simplex radios; and would not require expensive, and difficult to understand, cavity and duplexer filtering at the repeater station site. User radio costs would be low, as they would only need a single simplex radio. As a result of the characteristics of this type of repeater, the repeater builders and users would learn to coordinate frequencies, and user groupings based on environmental conditions, so as to acheive optimal results.

What about this as a proposal. Leave everything as it is as far as licenses are concerned. But, then eliminate the rule that you can't charge money for testing people. And, then work to get the FCC to cut a deal to allow, for example, Radio Shack and ham radio stores to give ham radio license tests right in the store -- and set up a computer system to give call signs right on the spot. Then, the stores could make a little money giving the test. And, might pick up some extra sales from new hams.

If real money could be made from the extra sales, the stores would give the tests free.

Perhaps you can ask Radio Shack whether they think your proposal is viable.

You could even have the test on the computer, the computer than could grade your test(s) and as you pointed out issue your call sign on the spot. Then the computer could pop up what the store had in your price range. You would then press your selections and walk to the front of the store, pickup your license and equipment and head home ready to operate.

We could do the same thing from Mall kiosks to attract young people. This could be coupled with playstation rentals, beepers, and cell phones. A one stop communications and entertainment kiosk. ARRL could create a Sony playstation and gameboy cartridge to teach amateur radio, along with an amateur radio adventure that would require simulated contacts with DX countries to obtain clues to finish the game. Wow! I wish I had thought of that. The only problem is getting it by the old elitist hams that think you should learn a bunch of code and radio nonsense to gain what is rightfully yours because you want it..

I do not think there needs to be a new Amateur service, but I also think you are perhaps being a litle hard on the guys commercial and money connection etc. After all, it was Tandy Corporation that made the FRS proposal to the FCC..and Tandy is commercial for sure..(ie Rradio Shack)

Percentages are for insurance companies. In an emergency you would HOPE to have cellular service.

When I was in the Navy, we had a catastrophic power failure while the generator was down for repair. We had to pull every quirky trick out of our hats to bring the boilers back on line. All during that time batteries went low and and we litterally did this while beating on failing battle lanterns. We had to call a nearby ship to bring us an extra 20 gal of Gas for the portable equipment because we had run out.

You better believe we wouldn't have sneered at a HW-7 if it had come to that.

If you were on a sinking ship, maybe you would want a crew that knew more than excuses and finger pointing. Anyone who has been on emergencies knows that half of the newfangled gadgets are worthless in an emergency. Like laptops and multi-mode controllers that take way too long to set up and require a pile of support cables and interfaces to get going, only to have something's batteries go dead.

I also used to support the local Mountain rescue unit with VHF and HF links, as they often found themselves on the wrong side of the mountain from HQ. After spending 30 minutes trying to get better than 20db of noise into the repeater on the other side of the mountain, we would shift to 75m mobile. After another 20 minutes trying to pass traffic on 75m phone when the signals were even with the QRN, I never again forgot the old straight key.

Also, many people seem to think that ham radio is financially prohibitive. You can be a real ham and make lots of contacts with a homebrew CW QRP rig, and get the $20,000 antenna/tower/rig/amp big DX station as you go, and have a ball getting there. We did it then, and people do it now. Besides, if the BIG DX/CONTEST station and the tower were delivered and installed, and you just got the license back yesterday, you've missed out on everything that went before. Truth be known, I'd rather be making that contact anyway, instead of punching through endless menu screens.

My Brother-in-Law's Dad was a ham, but had passed away many years ago.
He came to me interested in getting a license of his own. He actually
got all hyped up and did the Novice route. He would come to me so
stoked about swapping QSL cards and his contacts all over the place
with his HW-8. I'll never regret my own triumph of getting something
on the air with my own hands and actually making contacts with it.

On the Report and Order thing, I think there was a snafu. I got no
response back from the FCC on my comment paper to 98-143 other than an
automated receipt, but maybe the tide of popular opinion was against
me. Sometimes it takes a while for an idea to gain momentum, but it'll
never bear fruit if you don't plant the seed.

I don't like this idea very much. The part that worries me is as you say, they "might pick up some extra sales from new hams". Without accusing any store or anyone of dishonesty, I think it's a bad idea for the test giver to have such an immediate and direct financial incentive to have the examinee pass.

Roy Lewallen, W7EL

Before going any further, I will point out (for the benefit of some
readers, not yourself) that Truly Random noise power is
ALWAYS additive. Also, a quick and clean way to measure
path loss is Loss(db) = 37 + 20 Log F + 20 Log D where F is
in MHz and D is in statute miles. [1 Km = 0.6214 miles]

>Yes, it is very low, Len, but very low can be used quite effectively for

>Calculated receive system sensitivity in 1000 Hz bandwidth = -138 dBm
>Received noise in receiver bandwidth = -74.03362 dBm
>Received noise in receiver bandwidth = S 9
>Receive system noise floor increase in dB = 63.96638 dB

Okay, some remarks on that. First of all, path loss is frequency
sensitive. If the UWB bandwidth is 1000 MHz, then you can't
name one frequency as if this is the narrowband kind of thing.
If 1.2 GHz is the low end, then 2.2 GHz would be the high end.

The path loss over 1 KM (I don't want a goalpost-to-goalpost communications range of 328 feet...I can shout that far...:-) will vary from 94.5 db at 1.2 GHz to 99.7 db at 2.2 GHz.

The choice of 10 dbi Tx and 20 dbi Rx antennas is curious and there is no additional cable loss connections. I would pick a total antenna plus feedline gain at 15 dbi (assuming a cableless dipole reference standard). Total path loss, antenna gain, cable loss would now be -79.5 to -84.7 db over 1 Km. If the transmitter power output is 1 Watt or +30 dbm, the receiver input port would get -49.5 to -54.7 dbm of total UWB signal.

The calculated noise power of a 50 Ohm resistance at 296.9 K over a bandwidth of 1 GHz is 4.05 microvolts or -94.8 dbm with 0 dbm equal to 223.6 millivolts in a 50 Ohm system. Given a sloppy UWB receiver having a NF = 12 db (accounts for all variables such as A/D processing), the equivalent noise input power over a 1 GHz bandwidth is then -82.8 dbm. Overall signal to noise ratio over a 1 KM path is then 33.3 db at 1.2 GHz droping to 28.1 db at 2.2 GHz. That should be enough S:N tolerance for processing the UWB signal.

My particular peeve with the numbers is that the UWB signal in UNDEFINED. First of all, one cannot assume that the UWB signal (whatever it is) is spread evenly across the entire spectrum. It won't be. If the UWB signal starts as a 0.1 microsecond pulse, the spectral content will show defined energy appearing at 10 MHz increments. If there is some kind of modulation on this 100 nanosecond pulse, then the energy is still spread in 10 MHz increments but has some additional energy clustered at those increments.

An example of this clustering is the US NTSC color TV. The color subcarrier was chosen as an odd multiple of half the horizontal line frequency. Why? Turns out that the spectral content of a black-and-white video signal was clustering around increments equal to the horizontal line frequency. The color information would fit in-between the monochrome spectral content, would not over-ride it, and thus allow a transmitted color TV signal to be received over an existing monochrome TV receiver.

Okay, let's assume the undefined UWB signal does have a totally even distribution of spectral energy over a 1000 MHz bandwidth. As defined, the transmitter output of 1 W (total over the bandwidth) is equal to +30 dbm (to readers, 0 dbm = 1 milliWatt in a 50 Ohm system). Assuming the totally even "spread" of spectral energy over 1 GHz, the energy distribution could be stated as 1 nanoWatt per Hz (1 Watt divided by 1 x 10^9). Over a 1 KHz bandwidth of another receiver the received even-spread UWB signal would have a 1 KHz bandwidth signal total energy of 1 microWatt. But there are no values for path loss/gain yet.

Rather than using a 30 meter distance (about a 100 feet) to a neighbor's receiver capable of tuning in narrow bands (unlikely), let's postulate a 100 meter distance with the same Tx-Rx loss/gains modified for the shorter distance. Total path loss plus antenna gain is now -59.5 to -64.7 db. With a total transmit power of 1 W or +30 dbm, this second, narrowband receiver gets an input of -29.5 dbm at 1.2 GHz to -34.7 dbm at 2.2 GHz. However, the narrow filter in this second receiver will pass only one-millionth of the transmitted evenly-spread energy so the second receiver "looks at" only an equivalent energy of -89.5 dbm to -94.7 dbm.

Given the second receiver NF of 6 db and a 50 Ohm system at 75 F (296.9 K), its equivalent noise floor would be at -131.9 dbm. Is there sufficient signal to noise to clearly show the evenly-spread UWB signal at this second receiver? Yes...42.4 to 37.2 db to be more exact...provided that NF is as good as advertised. :-)

The presentation of this problem was hampered by a mixing of paradigms, of thinking too much that a UWB signal is "just like" a DSSS of a cell phone, appearing as even-spread random "noise" across a narrow spectrum. It has NOT BEEN DEFINED YET.

If the UWB signal were some mythical 0.1 microsecond pulse with width modulation, then the total energy will cluster at 10 MHz increments. That is enough to have a conventional 2m receiver be working from a down-converter and NEVER HEAR ANYTHING from the 0.1 microsecond UWB signal. Or, it could be sitting right on a cluster of energy and get more than expected.

What is even more complex is that the conventional comparison uses a repetitive signal analogue as to what to expect across a spectrum. That is a convenience and much, much easier than trying to find peaks by a time-amplitude analysis. In practice, even a DSSS signal does not have spectral content that persists as if it were repetitive...or as "noise-like" in an even distribution per frequency. Using a repetitive waveform transform is an absolute worst-case spectral energy analysis.

Cellular telephone digital patterns are generally chosen to spread energy evenly across a moderate bandwidth. The standard is defined. The UWB is not yet defined. With 33 nanosecond pulses, a UWB could have clusters every 30 MHz apart, having "open spaces" wider than the present HF spectrum.

Now, if anyone is doubtful of all this, just get a good, calibrated spectrum analyzer with a high dynamic range and start measuring some wideband sources with both repetitive and non-repetitive modulation. Note: Use proper spectrum analyzer bandwidths and sweep speeds to catch all the little energy products. The results can be interesting...and don't always follow the narrowband analysis methods.

Money makes the world go-round. Methinks. And if you want to
get more young people in the hobby, I think you need the kind
of marketing muscle that Radio Shack can provide. And, I think the fraud
issue here is over-estimated. There's been fraud
in the testing system as it is. If you had big companies involved,
who had lawyers, they could snap the whip with the employees.
And, they'd be better positioned to enforce standards, than random
individuals. I think.

Just enact some fines for cheating. Hire a few people to go
around, and masquerade as applicants to keep the system clean. And,
open an office, that would handle reports of fraud, and then
investigate as a criminal matter. It'd probably be cleaner than
the current setup.

Indeed correct. I used the path loss at 1.2 GHz, the frequency I was trying to receive in this calculated scenario. I didn't feel that the path loss on the frequencies I was not trying to receive was important.

> My particular peeve with the numbers is that the UWB signal

True enough, but the undefined UWB signal as being a uniform distribution of broadband noise makes the easiest calculations. Uniform distribution is not worst case.

> Given the second receiver NF of 6 db and a 50 Ohm

Those figures are correct.

> and get more than expected.

You are correct, an unmodulated UWB signal will either show nothing in the nearby narrow-band receiver, or it will show much more than the figures I calculated, but only on a single frequency. An UWB signal that is modulated with a slow data rate will result in slightly less signal across a slightly wider frequency range. An UWB signal that is modulated with high-speed data will appear to be fairly uniform across the frequency range.

One of the reasons I chose uniform distribution of noise for this approximate discussion,.

> Cellular telephone digital patterns are generally

> having "open spaces" wider than the present HF
> spectrum.

None of the UWB proposals I have seen have stipulated an unmodulated pulse, nor have they stipulated limiting the modulation to slow speeds. Even so, analyzing the levels of those clusters would give an interference potential on those frequencies >> the one I caclulated with a uniform noise distribution approximation.

<horseshoestew@my-deja.com> wrote:

> Say Ed, I was wondering, is there any way of getting transcripts from
> the proceedings that lead to restructuring?

You will have to ask the FCC, although I don't know if they are required to keep transcripts of internal meetings. The NPRM they issued summarized their proposal and the Report and Order summarized their decision.

> My understanding is that there were folks that had concerns about the
elimination of the Novice
> Class license.

I don't know what records the Commission keeps on the meetings of its staff or its Commissioners.

> but I've got a hunch that there is some support for something that will
set up a more healthy
> learning/operating environment for kids.

If that support, assuming it exists at all, were strong enough that they would reconsider their restructuring decisions, I think that they would have restructured the Novice at the same time instead of eliminating it. I think it will be hard to convince the Commission to implement a replacement for a class of license that very few people were choosing to hold.

> Why would the FCC have recently created FRS, and now MURS, if that were
not the case?

I believe that the FCC created those services to be communications tools. On what basis do you determine that their purpose is tobe a learning environment for kids? Is this documented in their rules or in the Report and Order that created them?

Fred, I know you know better than to keep cross posting this thread. Your
mail boxes could get awfully full.

> thousand back then.

The club radio station at Manchester High School (CT) had fallen into disuse
in 1966, the year I first attended.

> >The 80 & 40m Novice bands crawled with other kids.

> Really? My experience was a lot of WW2 vets were doing
> the crawling.

The 80 meter band was loaded with CW signals starting just as the kids got
home from school and lied about their homework. Of course, most receivers
of the day had about 5 kHz bandwidth or so, resulting in multiple signals
being heard in the passband simultaneously. Even so, the Novice bands were
a lot more used than they are today. From memory, most of the hams I worked
were under 30, with a pretty high percentage of kids under 18.

> >There were no home computers. There were ham

There were more "local" radio and electronics stores then than now. Mail
order electronics has become the norm. Back then, to get a part I had to
drive across town and hope it is stock. Today, I make a phone call and give
them my credit-card number. :-)

  The enabling legislation clearly says that examinations are to
  be given on a "reimbursement for out-of-pocket expenses" basis
  which precludes making a profit. [47 USCA s. 303(f)(1)(I)]

Finally got out of the trailer park to go to the public library, huh Roger.
So did mommy give you the car keys to get there. She probably even drove you
there. So where did you learn to cuss like that Roger, did your mommy teach
you to cuss like that.

Making assumptions again ED? Where did I say that *I* publically berate
any new ham or anyone else "because he doesn't choose exactly the
language I'd use"?
I *didn't*,I *don't*, never have, don' expectd I ever will. We both
know that it is sometimes done. That doesn't mean that I have done or
ever would do it. I like the others just move to another repeater. I
might just put tone control on it and fail to give the miscreant the
code,it he continues to flaunt his CB background in every ham's face.
That sort of behavior doesn't seem to bother you a bit.
And: I thought it was you who said that what happens on this NG doesn't
reflect reality in ham radio. Changed your mind, I see.

>

> Do you really see things in such extremes, or do you blow them up out of

Another poster mentioned that sometimes newcomers are corrected on the air and suddenly you leap to their protection whether or not it is needed or even wanted. I made the comment that when they refuse to learn how to act on ham radio that's when the hammers come out, and suddenly I'm an ogre. Time to get hour head on straight Ed, it ain't me that's the problem. And that remark about my nefarous activity as a VE in the face of the facts which are 180 degrees out is way beyond anything I have ever heard done to any newbie on the air. I guess only newcomers are subject to being offended and they by the slighest effort to help them being misinterpreted at harsh criticism! Amazing! IF this is what the hobby is coming to, I think I'll take my grandson and go fishing. If ham radio is turning into nothing but a PC feel good sideshow where honest efforts to help a new ham by offering advise -and I don't mean the sort of crapthat Paranoid Burke worries incessantly about- then you won't have to worry about me intruding in your utopian fun. I'll be somewhere doing something I can enjoy and it won't be in the middle of that nonsense.

I gotta decide by April whether or not to renew my ARRL membership. Gotta tell ya, it doesn't look to promising right now. Oh, I'll keep my ticket, that's not going away. Been a ham way too long to just hand it over to the Fragile Ego CBers, but I can sure hang out somewhere I don't have to worry about running into any of them. You won't find the Burkes where it takes any effort to use the resident modes.

I'd feel like some idjut like Cecil deliberately added their NGs to some
response post just to stir things up. Not the first time either.

     If it still could, then the "new stuff" wouldn't flourish. It
wouldn't be necessary. Why do you find it necesssary to TRY and gloat

on the obvious, Lennie?

Probably. But that you have found your way to rrap AND alt.radio.family is evidnece it happens. You could of as easily sent me an e mail.

>FRS is not a hobby service.

If you read the basis and purpose of BOTH Citizen's Band (of which FRS is part and parcel of) and the Amatuer Radio Service, you would NOT find the word "HOBBY" in either, yet both are used for that purpose.

That they are used for that purpose is obvious. That includes

FRS. You may not wish to apply that word (hobby)to it, but that's
exactly what a great many people use it for.

The Bandmaster was in the ham magazine ads when I was just getting interested in radio, well before I became a Novice. It just sparked some very old memories, that's all. I'm not into boat anchors any more than I'm interested in collecting antiques in general. Momentarily interesting but no thankew. I recently saw an an SX-88 bid up to $2,800 in e-bay, spare me. Every piece of ham gear I actually use is solid state stuff including an NRD-545 which has 40-bit DSP at the IF level. I happen to have a Collins 75S-3B and a Drake R4-B which are getting a bit long of tooth but they both still have better ears than the current crop of lower end xcvrs.
>
Running an 807 on 2m was definitely a stretch but it did put more of a signal on the band than a lot of the popular 50s 2m xcvrs like the Benton Harbor Lunchboxes and Gonsets, etc. Plus it was 100% modulated AM, not the lame screen modulated crap which was more common.

DUMBFUCK, I live in a house, not the welfare assisted "housing" you
currently live in, you know the one where you keep your CHEAP-ASSED
radios, the ones that were made in Hong Kong.......

>to go to the public library, huh Roger.

Don't need to, however, you need to learn ENGLISH skills, because most
people put a question mark after the end of a question. But, you never
finished school, did you, drug-dealer to kids????

> So did mommy give you the car keys to get there. She probably even
>drove you there.

No, but I gave the 5 dollars to your mommy when I fucked her, it was
all that truck stop whore was worth.

>So where did you learn to cuss like that Roger, did your mommy teach
> you to cuss like that.

Where did you learn to suck that kiddie dick??? Oh, that's right your
drunken, alcoholic bastard father used to teach it to you, to keep you
in the family business.

I x-posted to alt.fan.furry because I knew that you like those gerbils
up your FATASS..alt.test was to piss you off....lol!!!!!
FUCKWIT. Hope you enjoy it, choad swallower.

> In the meantime, watch out that the capybaras don't get you. -- SL

Be sure to remove that gerbil from your well-reamed ass, it'll enjoy
the oxygen.

That's a matter of opinion, a discussion which could go on forever. What is not a matter of opinion is the obvious fact that Novice test worked very well in it's timeframe. Ham testing has been a cyclic thing. It's run from the much easier days of the 50s to the Draconian Incentive Licensing maneuver to the nocode ticket, etc.
They all worked in their timefarmes. I just don't want to see the tests eventually watered down to to the point where they permit what would amount to a free pass to the bands just to prop up the license count.

>

That one year or hit the wall was definitely a stick IF you wanted to stay on the air. Which of course was strictly optional.
>

>
> Perhaps so. Although surfing the internet is no more than appliance operating in any sense of the word. Some of those who may have become hams could be attracted to some of the web-application programming things, but that has been a "challenge" to us, albeit in a slightly different form, ever since the first home computer was available.

>

Computers in fact are a big asset to ham radio these days in several respects, the damned things are almost becoming a necessity.
>

> I think that we can take the growth rate of amateur radio over that time as an indication of its relative appeal.

>

I agree. I'm not wringing my hands over the imminent death of ham radio.

>
> Perhaps, but even in 1963, it was not necesary to be a Novice, or even take the Novice test, before being a General and earning all amateur priveleges.

>

No, It wasn't necessary, none of it was "necessary" but it got a lot of new hams on the air who have not have bothered otherwise. You could have gone straight to the Extra for that matter and some people did. My neighbor AF3F was a avid CBer in the 70s who got a whiff of ham radio in my shack, the only license he's ever held is his 20wpm Extra.
>

The writtens never were any kind of big deal back then, the thrash over the writtens didn't start until the question pool nonsense came into play.
>

Certainly in my own (lame) case as a kid I made good use of that first year on the air. I had junk equipment which needed constant debugging from which I picked up a lot of on-the-fly technical skills. I'm not sure if I'd have pursued ham radio if I had to take the 13wpm test out of the box. Thousands jumped on the new opportunity to get up to 13wpm on the air. Instant gratification leads to learning in the right setting. Which was the bottom-line design intent of the original Novice ticket.

Dave, it is not nice to pick on older people. Len's "old timers" disease sometimes causes him to strike back without thinking.

What I took as mean spirited responses to my messages turned out to be caused by the lateness of his social security check.

It appears he had no money to purchase a new box of depends, and the
overflowing contents happened to get intertwined with his messages.

Len, you are the crabgrass in the lawn of rrac.

The Bandmaster was as much of an "all band" rig as one could get at the time of its production. No, it wasn't efficient above 30 MHz but it worked. It may not have had the best electrical design but it was a mechanical marvel with its right angle drive. It is also very compact. The matching VFO was designed with a slanted panel and a nice flat and low rectangular area where the transmitter could perch atop the VFO. I have two, one of them with the VFO. I'd be happy to sell you one so that you can spend hours admiring it. With luck, you'll be able to get a license and use it on the air.

Yes, the company did produce at least one receiver.

You can tell the '57 Chev collectors that their rides are deficient but I doubt you'll get any of 'em to trade them in on a new Taurus or an Intrepid.

Would you like me to send you a copy of "Now You're Talking"?

The only time I recall changing NGs is to redirect Morse code arguments
away from r.r.a.a onto r.r.a.p where they belong.

>Why can't we have Elmers instead of Radio Cops and Drill Sergeants?

More "jargon". When the term started, I was working for a
supervisor named Elmer who was a ham. He was a much better ham

than a supervisor, but what the heck, his idea of ham radio
was CW on HF. He could copy 40 wpm in Japanese Kona code and
had the paper to prove it. My first thought on hearing "Elmer"
so used was "why Elmer".... <ggg>

I still do my share of "Elmering" though but I don't call it that.

Perhaps because you have not been paying attention, Hans. One characteristic you and Lennie the Licenseless seem to share is selective memory. Especially when it serves an on-going rant.

You might as well specify this as "a sub-band from 446.0 to 446.2MHz"
and then they'll be able to use European FRS-style 500mW 'PMR446'
radios :o)

This is reminiscient of Cecil's conversion resulting from Eric June's persuasive arguments.

Nor do I, Brian. To the contrary; I have oft' said that the tests need improvements like questions about the fundamentals of modern radio technology and more questions on the formulae type questions. I have been having long talks with Bart Jahnke, ARRL's rep on the QPC, to find out what it would take to make it happen.

>That one year or hit the wall was definitely a stick IF you wanted to stay on
>the air. Which of course was strictly optional.

I didn't feel hit by it. If I hadn't been so lazy, I would have studied the 16-page study guide and practiced Morse code real hard and been a General right from the get-go.

Even then, I think the incentive of wanting more frequencies was more responsible for my upgrading to General than was the 1-year term for the Novice license.

I know two career Novices, who have renewed that license for years. Is amateur radio harmed in any way by their presence in our ranks? If we hit them with a stick, they simply won't renew next time. In what way would that benefit amateur radio?

I will believe that you are serious about the changes you propose when I see you file a request for rulemaking with the FCC. If it gets as far as an NPRM, expect most hams who file comments to oppose it.

It looks to me like another version of "if you won't play the game my way, I am going to take my ball and go home."

The only problem with that is you don't own the ball. :-)

>From: Dick Carroll dixie@townsqr.com

>So now you'd hold me to keeping constant watch on upgrades to the
>question pool?

If you are going to criticize the pools and the people who take exams derived from them, I believe that you should have at least looked at the pools before you did, yes.

>You seem more than willing to just ignore anything that
>is negative.

Not true, Dick; I have posted my own opinions about what is wrong with the question pools and amateur radio. I just don't think I have to take a positon that the entire process if somehow not of any use because there are a few things that should be made better.

>> Sure we do, Dick. You have described many of your on-the-air and VE
>> escapades here, and, frankly, some of them appeared to me to have
>>been pretty mean spirited.

>It is particularly offensive that you should assert that my "escapades" as

>applicant who ever tested with my team that question. That attitude cost
>me a lot of extra work since many applicants travelled long distance to
>test with our team, having heard of our astute fairness as opposed to
>other teams who were not.

I agree; my choice of words could very well give people the wrong impression that you did not conduct yourself as a VE honorably. I do not think that you would do anything inappropriate in the admiminstration of the tests. I just can't imagine how the attitudes you project here could not have been present at the sessions, however; why would you treat people any differently here than you do in person?

> What you are doing is demonstrating clearly the future planning of the
>League, whether you know it or not.

Now, could that fall into the same "outright lie" category as the words I chose about your VE testing? If ARRL is smart enough to realize that there is some merit to some of my views, I will be pleased, but, IMHO, that outcome is not at all certain. That is the reason I posted here several times that it is important for people to make their views known about this to their Director, and I hope that YOU did, too, Dick.

> The policy fo the League is becoming more and more clear as all this
> progresses. Yes, it may be your personal opinion. That doesn't
> mean it isn't also that of officialdom.

I hope you are correct, but if ARRL were to adopt the positions I have offered are best, it would not be because I posted them here.

> The league is falling right in line in the ongoing effort to keep up the
> bottom line. So be it.

I can name a lot of things the ARRL would not do if the "bottom line" were the only concern it had, Dick. You can go to the ARRL's annual reports and note that the bottom line is zero every year; the amount of revenues is directly related to what the ARRL can do. This year, I wouldn't be surprised if the ARRL will run on a slight deficit. I hope so, because one of the things on the plate is an additional ARRL staffer, who will be tasked with undertaking some of the work involving RFI to hams. Between powerlines and Part 15 devices and upcoming technologies like digital cable, home phone networking, home power-line networking, xDSL, Blueetooth and a number of others, things are not looking good for HF or microwave allocations. As one who wants to see this work get done, I am glad that some attention is paid to the finances, Dick.

But if you really think the "bottom line" is the only "agenda," why did the League not support one license class with a requirement to sign one's name on the application? It proposed something that was more than the FCC, and apparently many in the Amateur Community, was willing to accept. IMHO, that proposal was influenced very much by the input of hams like you, in tandem with input from hams like Cecil or Brian. The ARRL's position was a compromise position that included your point of view as one of its components. If your response is "bottom line" and "agenda," and you put that response into your input to your Director (would you treat us any differently than you treat him?), how do you think that such a response to ARRL's past actions will affect its future actions?

>The K2 will have a better front end but when you move down the chain and run
>into the filters it'll be all over for the K2.

Maybe. I think the skirt selectivity of the old Collins may be better than some modern rigs, but certainly not all modern rigs. Care to stack the skirts of the Collins up against the IC-756PRO?

I also want to look at what is still a problem for many modern rigs -- in band IMD, ie, the intermodulation that occurs when two signals are present simultaneously in the receiver passband. Most current equipment doesn't do very well in that regard and I want to see how the old Collins S line did.

Actually, I am pretty serious about all this. I have asked our test engineer to get a few of those old receivers and take a look at them.

>The K2 is a puzzlement. The thing has a kilowatt receiver and a five watt
>transmitter in the same box.

I do know that 5 watts was the design goal. It was intended to be a QRP rig. The designers can't help if if they happened to design a receiver that is better than most. :-) And do remember, "better" is a relative term. It does indeed have superior dynamic range characteristics, but it also lacks many of the features that hams buy "big" rigs to have. For most hams, with modest antennas, features are more important than dynamic range.

Stew,

To set the record straight, here are some of the changes I have recommended to the FCC.

During the "restructuring" NPRM period I recommended that the number of licenses be reduced from 6 to 2. The FCC met met me halfway, and reduced it to 4.

I recommended the top CW test speed ought to be 5WPM. The FCC agreed.

I supported the vanity call sign system. The FCC agreed.

I have recently supported a recommendation that Novices be granted the same CW priveleges as Generals. The FCC has not yet ruled on that idea.

So much for "against lowering the CW requirements" and "block all change mode".

The reason your "Colt" idea has gained no traction among seasoned amateurs is because it is duplicative of the current Technician class, and because it would segregate new licensees in an RF ghetto, remote from mainstream Amateur Radio.

Dave, most readers here long ago dropped his posts from their reading list anyway. He has nothing of any consequence whatever to say, never has, only drivel and venomous garbage. It's real easy to just toggle past his entries in the traffic list, and the only time I ever read anything by him is when it is quoted by someone else. Nothing to says bothers me and none of it is anything that I would want to read since I learned long ago what his game is.
Ol' No CW Testicles never has had anything constructive *to* say here, never will. Nuthin' but venom. I ain't buying. NOT sorry either.

Move to Los Angles????
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!
Funneeeeeeeeeeeeee!

He's insane.

BTW I just checked my utility statment from last month,out of curiousity since it's been some time since I last did. Electricity cost was 7.2 cents per KW... and it's been so long since I've had a power outage I don't even remember it.

Good to see you back, Dave.

Without bequests and donations (and many times with them) the
ARRL bottom line is usually $zero or a negative number.

Anyone who thinks that FRS or what ever you want to call it is ever going to capture the imaginations of younger people must be having an illusion of some sort, it ain't gonna happen.Walkie talkies have been around for a while. Most of these little toys will soon be found at most yard sales, how ever for the price they are asking they may just sit in a broom closet a bit longer than most junk.
Lets face it, amateur radio is going out faster than anyone cares to admit. Family radio has found a place among hunters and hikers and that is about as far as its going to go. J1

Not quite true, Dwight. (In fact, I may actually agree with some of your observations, but that isn't the point.) The frustration arises from what appears to be fairly intelligent people suddenly loosing it and feeling the need (or perhaps craving) to post a subject which has absolutely nothing to do with the charter of the newsgroup. I can only see two reasons for doing this: (1) they're trying to provoke a reaction by deliberately posting something that will offend/irrtate somebody, or (2) they're so emotional about a subject that they feel an uncontrollable urge to make some statement, however inappropriate the forum. If it's case number 2, then there's plenty of appropriate newsgroups out there, and hey, go for it!

In response to W6DKN's comment: you're partly correct, I have been off this particular NG for some time. However, I don't see the logic in the statement that because somebody posts an OT message, it's therefore okay for everyone else to follow suite. Curiously, this NG seems to be particularly affected, whereas posts to the more technical NGs seem to pretty much stay on topic -- although I will agree that not always 100%.

Sorry for the BW guys,

73, Darrell.

shared these priceless pearls of wisdom:

->
->The only problem with that is you don't own the ball. :-)

Ed, mostly I agree with you. In this case, I suggest that you go back and reread the document that begins, "We the people..." to figure out whether or not we own the ball and have given the temporary right to make the rules of the ball game so long as the rulemakers are in accord with our collective wishes.

The power company here has time of day rates. You can save money by shifting your heavy usage to the cheaper hours. According to what I've read, people respond better to the economic carrot than to the altruistic conservation requests. Although... they might respond more enthusiastically to the blackout stick... :-)

Elecraft offers a 50 watt amp as an internal module option. (A 100
watt module is under consideration according to the web site.) It
takes the place of the autotuner and/or battery modules, neither of
which could likely handle 50 watts... :-)

Now yer cookin', big issue. Comparisons of IMD might be an interesting horse race between the pricey old rcvrs like an S3-B vs a 756. I manned the graveyard shft on 20cw last Field Day with a beat-up solid-state clunker, FT-440 or something like that, I'll swear my old S-40B had less IMD than that xcvr has. Drove me batty.

>

> Actually, I am pretty serious about all this. I have asked our test engineer

>
Great, the idea has been floating around for awhile, good to see it coming to life.
Should attract a lot of attention. Lab tests of a late model S-3B and a Sherwood Drake R4-C vs. whatever might prove to be real eye-openers and reality checks.

>
Was not "accidental" . . they busted their butts on it. The K1 is a much more "balanced" design as far as the rx and tx meeting realistic qrp functionality needs
are concerned. If they had a nine-position bandswitch on the K-1 I'd probably go for one.
>

> And do remember, "better" is a relative term. It does

>
When I picked up my trusty old used TS-940 I toted up a total of *75* connectors, knobs and buttons. Not counting more contols lurking in menus. And after all that it still doesn't have a simple bandswitch. Once I get the thing hooked up and running I use the same 6-8 controls I used in 1960 for the most part. And the 940 goes back twenty years, the current xcvrs have even more "great features". Utter insanity, VCR controller think. The K2 interface makes a lot more sense to me in this respect.
>

> For most hams, with modest

Button diddlers. Not for this cw dx contester. The bloody signals of the locals around here gotta be in the miilivolt range on 80 at dx contest time.

Conversely, as a Novice I was already on the air and having a ball with 5wpm while you would have been still droning away with w1aw practice sessions to get from 5 to
13wpm. There wasn't no better way to get the speed up than when you got a 10wpm response to a 5wpm CQ. Adrenalin rush, sweat, sweat, copy, copy. Heh-heh!
>

> Even then, I think the incentive of wanting more frequencies was more

> license.

>
Abolutely no question about that. That particular FCC had reasons for sticking the Novices in otherwwise sparsley populated segments. I couldn't wait to get outta those bands and go play with the big boyz after I'd acquired the skills to deal with them. Fact is that the Incentive Licensing gambit was far more a stick and carrot thing than the old drop-dead Novice ticket was and Incentive Licensing happened 17 years after the Novice ticket was introduced.
>

> stick, they simply won't renew next time.

>
As has the rest of life the fundamental FCC philosophies behind the tests changed. The FCC in those days took an agressive, proactive stance with respect to promoting
upgrading as witnessed by the time limit they put on Novices back then along with the later partitioning of four HF bands by license class. It was sticks & carrots galore and that's simply the way it was *then*, historical fact. Since then the FCC
has opted to change the ballgame in many ways so now Novices can go on being Novices forever. There is an uncountable number of mindsets, regulations, policies,
etc. everywhere in life which "worked" in 1968, let alone in 1951 which don't fly today. I'm not passing judgement on any of it here.

For an individual ham? No harm at all. For all hams to choose to take that path? I don't think Amateur Radio would survive long. I think that the likelihood all of those who choose to be hams will simply operate and never improve themselves technically is about zero. I think the likelihood that some individual hams will do so is just about 1.0.

As I look at the present ratio, I believe it to be at a level where the percentage of hams that do improve themselves technically is high enough that we meet our regulatory goals as a service. Incremental changes in testing and requirements to try to trap those last few (that are, IMHO, causing no real harm) would be at a point of diminishing returns right from the get-go.

They were not agressive in 1963; they gave me my General, which got me all
amateur priveleges, and I never heard another word from them.

> It was sticks & carrots galore and that's simply the way it was *then*, historical fact.

One carrot; take a simple test with a 4-page study guide and have fun until
you get your General. The only stick is that you have one year to do it.
If you don't want to play with sticks and carrots, go right for General and
be done with it altogether. Not exactly "galore" IMHO.

In that case I would like to make you an honorary member of NHI and assign you the next sequential number NHI#2741.

While our membership is growing by leaps and bounds, I would ask that all prospective members no longer make their contributions in Pokemon Pongs, or baseball cards. While we at NHI recognize the intrinsic value of your contributions, I have been unable to trade them for necessary required supplies at my local tavern.

I would suggest that you rethink that tact.

Did I miss out on the announcement where you had been appointed Usenet enforcer?

net protocol does not allow me to alter the headers on a thread I did not start. As I am not the author of this thread, you are addressing the wrong party.

I also note that your message was sent to all the newsgroups as well.

"Galore" in the sense that the vast majority of the kids who got into ham radio
took the Novice path, I don't know of any myself who went straight for a
General including those who well into electronics. Kids "galore" opted to face
the stick.

I can't imagine why the ham demograpics would be so different. It didn't seem to be a fluke but I never paid any attention to any of the "stats". There were also several hams in the preceeding class. Two of my high school ham classmates were also classmates in enginering school, one of those is a lifetime buddy and we've been in the same contest club for over 40 years. Maybe it had something to do with the heavy concentration of the electronics industry around here in that timeframe. RCA, Philco, GE, the big Navy electronics labs, even B&W. 1963 was ten years after my time as a Novice, that could be a factor. Beats me.

From today's ARRL Bulletin:
>
"The Board's Morse Code resolution declared that deletion of the Article S25 international requirement at WRC-03 ''should not automatically or immediately mean a similar removal of the Morse code from Part 97 of the FCC rules.'' Morse code, the Board affirmed, deserves continued support as an important operating mode as well as in terms of spectrum and ''should be retained as a testing element in the US.'' The resolution also called on ARRL Headquarters staff to ''develop a program designed to promote the use of Morse.''

That's unfortunate.  According to a popular website for alumni,
story has it that the lady died in 1960 from complications of
an STD.  Must be a different Peggy Sue...

Thank you, Phil.  Too bad you weren't here a couple years
ago when I bothered some LAPD people about this "CW
station."   :-)    They were very courteous and did explain
some interesting history of the LAPD at the time.

California Highway Patrol Sacramento CW station was "out
of service" in 1963?  OK.  Thanks again.

Thank you for the interesting website, Ed.

The "TxPorter" works by measuring the transmit frequency drift
when activated.  Sounds simple enough...but that assumes
that each transmitter's frequency does exhibit short-term
drift (probably does, no dispute).  As to "identification" it depends
on comparing to a "known" database (software limit of 256
"fingerprints").  Not quite the same detail as with finger type
fingerprints but better than nothing.  :-)

Motron sells theirs for the economical price of $799 for computer
card and software.  [needs a computer existing]    800 bucks
doesn't sound "economical" to the average amateur or does it?
I suppose it does.  If W1AW can afford commercial Harris HF
transmitters for an amateur radio station, it does, it does.   :-)

>worked. It may not have had the best electrical design but it was a
>mechanical marvel with its right angle drive.

I'm sure it was. I bought a couple National right-angle drives
back in 1949, no doubt inspired by the thoughts of amateurs
desiring this particular model. For something else of course,
not to make a mechanical marvel such as the Bandmaster.

>It is also very compact.
>The matching VFO was designed with a slanted panel and a nice flat and
>low rectangular area where the transmitter could perch atop the VFO.
>I have two, one of them with the VFO. I'd be happy to sell you one so
>that you can spend hours admiring it.

Doubtful that I could afford the price considering others' concern
with my hygiene. I do thank you for the offer.

> With luck, you'll be able to get a license and use it on the air.

Really? I am heartened, although I thought the achievement
of obtaining a license was lots of hard work and a lifetime
of worship and devotion.

>Yes, the company did produce at least one receiver.

This seems to be at odds with the ham writer on one website
so the two of you can discuss that matter.

>You can tell the '57 Chev collectors that their rides are deficient but
>I doubt you'll get any of 'em to trade them in on a new Taurus or an
>Intrepid.

>Would you like me to send you a copy of "Now You're Talking"?

Thank you. That would be ever so kind of you. You will have to pay postage, of course. If you send more than one I will be glad to hand extras out to youngsters in front of the HRO at a mini-mall on the corner of Buena Vista and Victory in Burbank, CA.

Graeme:

I appreciate your concern, but the U.S. no longer has a "second-rate
government in north america (sic)." As of noon yesterday, we are
back to having a first-rate government!

>Hey Aussie....I got a better idea, go stand out on the street corner
>and tell the guy fixing to shoot you to go turn in his weapon.

I do not endorse this advice, Graeme; after all, the criminals *are*
out there and they *are* armed; unfortunately, law-abiding citizens
of Australia, such as your own good self, are not. Therefore, I'd
advise you to take up permanent residence in a police station.

>words,

Ed:

Just exactly how "slow" a "learner" should we hams tolerate? When told, once, that use of terms like "handle" and "personal" are not generally accepted on the amateur radio airwaves, how many infractions must be permitted before the newcomer can be "set straight" in no uncertain terms (preferably off-the-air)? To use a different example, how many "yield" signs must be posted at one intersection to actually induce the behavior of making the motorist yield to oncoming traffic? Obviously, a reasonably fast learner will only need one; but you apparently seem to advocate an unlimited number of "yield" signs at each intersection, right?

 I would very quickly decide that is not a caring, sharing community. I
>almost certainly would find a different circle, because with friends like
>that,
>I would not need enemies.

To which I would reply, "Be my guest -- don't let the door hit you in the ass on the way out!" But getting back to this "caring, sharing community" crap, Ed, just what *was* Mother Teresa's call sign?

>Fortunately, when I first became a ham and probably made "gaffs" that I
>wasn't
>even aware of, I didn't receive the type of "welcome" you are describing.

Neither did I, Ed, because I made relatively few "gaffs" (sic). You see, picking up a microphone and talking into it is no big deal. It's not rocket science, and it's not social science. It's just talking. And us hams have usually talked on radios pretty much the same way we talk all the rest of the time -- without wierd, unconventional slang, acronyms, and lingo. Of course, if you live in a run-down trailer park in 4-land, your mileage may vary.

>IMHO, telling people what they "better" do is not in the spirit of ham radio
>that I have respected for decades.

But telling them what they "better not" do certainly is!

>the bases in the wrong direction for fear he will give up baseball?
>
>Give me a single reason we should be bending over and kissing some snot
>nosed kids ass to get him active in ham radio! If they are interested, I
>will bust my butt to help them.

There is no reason whatsoever. My experience has proven to me that people who are genuinely interested in amateur radio will get involved on their own initiative. What is needed, more than anything else, is major, mass media publicity. Unfortunately, the ARRL seems totally helpless in getting any for us.

>I have Elmered more than a few in my time, but at no point did I waste time

>on anyone who had no interest.

Nor should you have to. Whenever I've been involved in ham radio instruction, I've always told the class right from the beginning that I am there to show them the way, but there is a lot of hard work that needs to be done and I'm not going to do it for them. That usually causes about a 90-percent attrition rate right from the beginning, and I'm left to effectively "elmer" the remaining few truly interested newcomers who are more than willing to learn the code, open the books and read them, and learn which end of the soldering iron gets hot.

>I had one guy wanted to be a ham and was having trouble with the code. It
>took me a while to realize his problem was not the code, he did not know how
>to read or write. I worked with him for over a year and he earned his

>all the cock and bull about "how tough it is on the children to get a
>ticket".

Well, unless you're a trained educator, I wouldn't have bothered with that guy. Ham radio isn't a proper hobby for illiterate people. My advice to them would be to take care of learning basic life skills before they concern themselves with hobbies.

Actually, no; my General expired. I think it was 1976 when I got relicensed. I set off to get my Extra at that point, but parked in a no-parking zone in Boston and got my car towed. I had to sprint to the FCC exam site and just missed the 20 wpm code test. I took all the tests through Advanced that day, then went on and took the First Phone. All carrot; no stick.

> All? I wouldn't advise getting on 7.010 with a General.

Thanks for the clarification; I thought we were still in the good old days of 1963. :-)   That is the time frame I was thinking in.

How much of that is due to differences in hams and how much is due to differences in the rigs? We learned troubleshooting because we felt we had a shot at fixing the rig. Although it is possible to do more troubleshooting on today's rigs than most hams will admit to, I can well understand if troubleshooting does not appear to be worth learning in today's radio environment.

It looks like I get to change back on my CW position and you will have to go along in agreement Ed,

The Board also revised its position on whether Morse code proficiency should continue to be an international requirement to license operation below 30 MHz. The Board approved a resolution that ''recognizes and accepts'' that the Morse requirement likely will be dropped from Article S25 of the international Radio Regulations at the 2003 World Radiocommunication Conference. But the Board held the line on retaining a domestic Morse requirement, saying that each country should be allowed to determine for itself whether it wants to have a Morse code requirement.

The Board's Morse Code resolution declared that deletion of the Article S25 international requirement at WRC-03 ''should not automatically or immediately mean a similar removal of the Morse code from Part 97 of the FCC rules.'' Morse code, the Board affirmed, deserves continued support as an important operating mode as well as in terms of spectrum and ''should be retained as a testing element in the US.'' The resolution also called on ARRL Headquarters staff to ''develop a program designed to promote the use of Morse.''

The resolution supersedes all previous Board policy statements regarding Morse code and Article S25.

What? You gave up on your new outlook so soon?

I was pleased to see the Board's policy wrt the international treaty on Morse code testing. In my input to my Director, I pointed out that, IMHO, international treaties should be reserved for things like global warming, president stabbing and intercontinental ballistic missles. I don't believe that the nations of the world need concern themselves internationally with Morse code testing in the Amateur Radio Service.

I also agree that it is quite appropriate that each nation be free to decide for itself what specific
Morse-code requirements are needed for an amateur license.

The ARRL Board took the step to reaffirm that it is not changing its current policy wrt the Morse-code tests for US amateur licenses. I didn't believe that it was necessary to say this; simply changing the existing policy wrt international requirements stood on its own. I support not changing the position wrt US testing at this time, but possibly not for the reasons that you do. It is quite likely that consideration of that at WRC will take place in 2003. It would be at least a year before that treaty is ratified, and until then, the FCC has given every indication that it will not be revisiting the Morse code testing issue.

At that time, we will have seen changes in the Amateur Radio Service, may have seen other changes in the nature of the testing and will have gone through at least one election cycle in each Division in the ARRL Board of Directors. Although I feel it safe to say that some of the present incumbents will serve on the ARRL Board in 2004 or later, I also feel it safe to say that it is likely that there will be a new mix of leadership and that Board could very well come to a different policy conclusion than this one. I do not believe it would be appropriate for this Board to make policy that may need to be determined by the ARRL Board in the future; in fact, would be more competently determined by the Board at that time than it is now. The Board addressed what is before Amateur Radio now, the need to prepare for the upcoming WRCs over the coming few years.

How the Board of 2004 will decide will be determined by the makeup of that Board, the influence of ARRL membership and the specifics of what is proposed by the FCC. If more of those who seek to end code testing in the US join the ARRL and vote the bums out, then we could see an entirely different view. If those who feel that code testing needs to be preserved make their views known, then it is equally possible that the League could choose to pursue keeping code testing as part of the US requirements even if it is no longer an international treaty requirement.

Will I support the present policy of the ARRL Board? Yes, I will. There is no action that can be taken at this time by ARRL wrt code testing in the US, so not changing the policy at this time, but deferring it until possible action is less than 3 or more years away is, IMHO, the right thing to do. Yes, I support not making a decision now that can be better made later, when more factors can be considered.

I will add that these are my personal views. The ARRL policy on the matter is stated clearly in the resolution and Web article.

Well, if you have changed your mind, you may have to change your sig. I
don't think it really promotes CW to call it "Lotsa' Hassle International,"
though. Do you? :-)

Well, Larry; the plan you proposed would have eliminated ARRL's RFI program,
so even you deemed it not acceptable. Did you come up with an alternate? At
>$100k per 30-second spot on prime time, I am not sure mass-media ads are

the answer.

What percentage of people that might be interested in ham radio do you feel do not know about its existence?

In the classes I have helped teach here in Newington, we skip the lecture and have a much higher graduation rate than 10%. Now, if ARRL is going to spend all that money on mass-media ads for you, Larry, we expect you to score better than a 10% on your "final exam."

It appears to me, Larry, that the guy's concern with ham radio helped him to attain a major basic life skill, with some help from Fred. That must say more to me about the value of ham radio than it does to you.

I blew the General code test the first time, had to wait a month to take it over

and wound up getting my General just a few days before my Novice died. You had
to start getting really concerned about not having taken the General test 10
weeks before the end of the Novice license 52 week term if you wanted to stay
on the air without a break. Assume you flunk the first pass, wait 30 days to
take it over, pass the second attempt, then wait six weeks for the FCC to
process it and mail it. Talk about different days . .
>

> I took all the tests through Advanced that
> day, then went on and took the First Phone. All carrot; no stick.

>
Yeah, well I went thru the stick & carrot thing twice. First with the Novice,
got the General and had it all. For 14 years I thought I had it made for life
and all of a sudden I wound up having to take the Extra or get whacked with the
stick.
>
I had to beaver on the code because I'd long since been copying only in my head
so I had to get back up to speed with the pencil & pencil drill. I pretty much
breezed thru the Extra. The examiner casually tossed another exam across his
desk at me, sed "Try this one too, Kelly". Wound up with a Second Telegraph.

From today's ARRL Bulletin:

>

"The Board also revised its position on whether Morse code proficiency should continue to be an international requirement to license operation below 30 MHz. The Board approved a resolution that ''recognizes and accepts'' that the Morse requirement likely will be dropped from Article S25 of the international Radio Regulations at the 2003 World Radiocommunication Conference. But the Board held the line on retaining a domestic Morse requirement, saying that each country should be allowed to determine for itself whether it wants to have a Morse code requirement.

>

The Board's Morse Code resolution declared that deletion of the Article S25 international requirement at WRC-03 ''should not automatically or immediately mean a similar removal of the Morse code from Part 97 of the FCC rules.'' Morse code, the Board affirmed, deserves continued support as an important operating mode as well as in terms of spectrum and ''should be retained as a testing element in the US.'' The resolution also called on ARRL Headquarters staff to ''develop a program designed to promote the use of Morse.''

>

The resolution supersedes all previous Board policy statements regarding Morse code and Article S25."

Marketing muscle? Is this from the same group of drooling no-loads I've
encountered in almost every RadShack I've entered over the past several
decades? These folks panic when a customer refuses to provide his name
and address.

The people who are Radio Shack's customers seem to be from several
distinct groups: a) those who need a part in a hurry and can't wait for
delivery from a "1-800" house (I generally fall into this group), b)

those who don't care about price, c) those who don't care about quality
and d) those who are waiting for a spouse to finish shopping at the
mall.

I don't think we need individuals who are incapable of identifying an
electronic component administering amateur license testing.

The little southern West Virginia town of Oak Hill where I lived in the early and mid-1960s had a population of about 7,000. Collins High School boasted an amateur radio club (which I helped to begin as a sophomore) and the town had six teenaged Novices in the '63-'64 time

frame. None of us are EEs but all are still active hams. K8CFT who ran
the local TV sales and service shop and who administered our exams did a
pretty good job of motivating us.

You discuss it with him. You can be the first to straighten him out.
The receiver was the R-9, produced in 1955. It featured a slide rule
dial, covered 80-10m and weighed in at 10 lb. The cabinet was 12 1/2" x
10 1/2" x 6 3/4" and the receiver sold for $149.50 less speaker.
You can't get all of your information from the internet or television.

Does the League's newly announced substantial dues hike in these times of low inflation strike anybody else as being excessive?

I noted Dave Sumner's talk of the ARRL being involved in the kinds of things which dues and publication sales would not cover. My feeling is that there is little that the League should be doing which could not be covered by dues and publication sales.

My own feeling is that $39 per year is high for value received since the League already charges now for services which were formerly provided at no cost to members. QST is almost void of good articles these days. There is a dearth of technical content. Contest covereage and DX news are minimal. If I wasn't already a life member I'd have think hard to come up with enough reasons to justify renewal.

Since he was a part of the inner circle for a while, perhaps Hans can share his views on the announced increase in ARRL dues.

Apparently, you have never had the IRS mob after you for something
of which you are innocent. With the IRS, you are guilty until you
prove your innocence beyond the shadow of a doubt and then some.

Ed, serious for once, Most TV stations are required to air Public service
announcements. A message about ham radio, directed towards today's youth
would qualify and be no cost except for production.

Tie it in with the Big Brothers / Sisters mentoring program.

I would be glad to do a bit of research as to what is involved with the
PSA's if any interest at Hdq.

Let me know.

For what ever reason this cross posting continues to be a problem usually stemming from the ham groups. You surely have control to which NG you direct your response to. It figures you would follow everyone off the cliff to adhere to protocol. Do you believe that anyone who is only interested in CB gives a rats @$$ about some new Brownie license to use a radio? This NG is CB no license, no policy etc. So why even post it here?

If I have to nominate myself as the enforcer of this group so be it others will support the cause. If the amateur NG would like all of the CB posts crossed to their NG it can begin immediately. You see it is like one guy turns on an amp then another then another and pretty soon the whole band is unusable. Is it time to see who's is bigger? Or can this just end and everyone take their posts where they belong?

Since I don't know the origins and really don't care to waste time researching I am posting back to all the groups so that no one can later say what happened and why. This thread being crossed to the CB group can be stopped if you want to. Or you can get prepared to read many more posts that don't pertain to your groups.

Here the ARRL Board's Jan 20 resolution:

On motion of International Affairs Vice President Stafford, seconded by Mr. Frenaye, it was MOVED that the following resolution be adopted:

WHEREAS, Morse code, named after Samuel Finley Breese Morse, is an invention that has been essential to telecommunications for over 150 years; and

WHEREAS, the international Morse code has been an essential mode to Amateur Radio from its beginning to this day; and

WHEREAS, Radio Amateurs formed a pool of skilled Morse operators vital in the 20th Century for national defense, disaster, maritime-mobile and aeronautical-mobile communications; and

WHEREAS, since the 1950s there has been a great influx of other technologies that have gradually reduced the need for trained Morse operators outside the Amateur services; and

WHEREAS, the aeronautical-mobile and maritime-mobile applications of Morse have been or are being terminated throughout the world; and

WHEREAS, there is an agenda item for the 2003 World Radiocommunication Conference to consider Article S25; and

WHEREAS, it is highly likely that administrations will delete the Morse code requirement in Article S25 at WRC2003; and

WHEREAS, the international Amateur community has followed the United States lead in reducing the code speed requirement for licensing to operate on bands below 30 MHz to 5 words per minute and there is a trend toward elimination of this requirement; and

NOW THEREFORE BE IT RESOLVED, that the ARRL Board of Directors recognizes and accepts that suppression of the Morse code requirement in Article S25 is likely to occur at WRC 2003; and be it

FURTHER RESOLVED, that deletion of the requirement from Article S25 should not automatically or immediately mean a similar removal of the Morse code from Part 97 of the FCC rules; and be it

FURTHER RESOLVED, that each administration should determine if Morse code is retained as a testing element; and be it

FURTHER RESOLVED, it is the opinion of this Board at this time that Morse code should be retained as a testing element in the U.S.; and be it

FURTHER RESOLVED, that the Morse code is deserving of continued support as an important operating mode including providing for the protection and maintenance of sufficient spectrum in band planning; and be it

FURTHER RESOLVED, that staff develop a program designed to promote the use of Morse code; and be it

FURTHER RESOLVED, that this resolution supercedes all previous statements of policy related to suppression of the Morse code requirement in Article S25.

I agree. But the percentage of non-technical hams as compared to the
total ham population is vastly higher today than it was in the 50's
and 60's, don't you agree? Do you think this downward curve of
technical hams will ever turn upwards again? If not the curve will
eventually approach zero...

Likely a ham club would be more likely than the average amateur to buy and use that type of equipment to track down violators on their repeater systems. To a club of any size that would not be hard to finance...

I think that most of it is due to the rigs. They were simpler and much
much easier to work on years ago. The cars were simpler then too. I
could tear a car engine down when I was a teenager. The boys who
married my daughters have trouble changing their oil. :-)   I think
the same principle applies to ham rigs...

>Although it is possible to do more troubleshooting on today's rigs
> than most hams will admit to,

Easy for an engineer to say, especially a
 professional ham engineer... :-)

There's a truism there. Given the inherent reliability of today's
semiconductor and passive components, failure rates are
very low compared to vacuum tube days.

Troubleshooting _inside_ a box isn't needed by today's amateur
radio operators. But, they should be able to troubleshoot
things _outside_ the boxes. Hopefully, some will learn to
measure the performance of their ready-builts to stay within
regulations' technical requirements.

Sounds like just-another-rerun of Jim Kehler's "No SSB
International" and Eric June's attempts to become "Names"
through self-appointment.  They even had their own Logos
(Kehler's was a reworked copy of NCI's Logo).  I guess it's
all in "that's the way they did it so everyone else has to
do the same" spirit of being Dill Sergeants in the Service.

>game so long as the rulemakers are in accord with our collective wishes.

Interesting philosophy there.  Except...who are the "we" in
"we the people?"

I can understand that the "we" includes only already-licensed
radio amateurs since so many have declared their "collective
```

wishes" in regard to such a rigid maintenance of the status quo. Still others express "collective wishes" as if the entire "amateur community" were a form of lodge hall or fraternity (or even sorority) and insist on obtaining a license _first_ before being able to voice anything in regards to license testing matters.

The FCC is the only US civil radio agency that regulates US civil radio and the only group that issues amateur radio licenses to civilians. The FCC has stated more than once, including in their Handbook, that they exist for and will hear from all US citizens. On and about any US civil radio service.

I sense an interesting dichotomy in this newsgroup. It is almost exclusively a forum for already-licensed radio amateurs with many of those having a very rigid rule of conduct not only on obeying the law of regulations but also of strict obediance to obeying a non-law of traditional conformity to everything in and about the "amateur community." The other side of this dichotomous state is repeated attempts to dissuade, bar, and generally disfavor any non-amateur from expressing any thought on the subject of or regulations regarding amateurs. That other side is quite contrary to the US Consititution in its Preamble which begins "We, the People..."

There is no "political correctness" nor any "sensitivity to any weak" individuals or anything else to this other side of the dichotomy. It is simply against the principles of the Constitution. It smacks of a fraternal order which wishes to go against the US Constitution, not quite illegal but as close as one can get to it without having codification in law.

It would seem that this "other side" attitude is a good bar against other US citizens desires, of any kind, in getting or even attempting to get into US amateur radio. That attitude is not good for much of a future or even help from the single US civil radio regulation agency.

It is as if there were a separate "declaration of independence" that is "signed" by all on completing a US amateur radio test as if they are distinct from and independent of the US Constitution and any democratic principles.

Just an observation from someone who believes in and once took a serious oath to defend the United States Constitution with his life if needs be.

Absolutely not.

The "requirement" for PSAs (it never was a REAL requirement, just an FCC program-type category that had to be reported to earn "brownie points" at renewal time) went out when Program Logs and Composite Week reporting were abolished in the 1980s.

The stations that still keep doing it do it to foster good will in the community, not because it is required.

Well, Darrell, don't worry about it. Its not your job to defend the charter of this newsgroup, or to consider how appropriate the message is. So, relax, don't worry about it, and go on about your business of reading the messages in this newsgroup that do interest you.

Well, I sure can. I didn't buy one of those cheap Life memberships way back when because I wasn't that sure I'd always want to be a member, based on some pretty lamebrained acts they either did or condoned. Now my membership expires in April and they keep trying to help me make up my mind whether or not I want another year.

One more mark on the negative side.

There's nothing that comes in QST that I can't find on the net. They have no visible clout with the FCC anymore. Nothing much but feel-good propaganda issues from Newington these days.

What good are they?

Hey-- I see that the BOD made Mark Wilson, the Editor of QST, the "Cheif Operating Officer", over most HQ operations. I thought that was the Executive Secretary's job.   ????????????

Percentage-wise, it IS high. If you look at what inflation has been since 1997 when the League last upped the cost of yearly dues, it is outrageous. I think most folks would gripe about five bucks out of their pockets when they get nothing additional for the fiver. If it is such a small amount, why doesn't the League cut the present dues by five bucks per year. After all, it is only five dollars--a mere 2 cents per day ;)

I could quit but I'm paid up for life and I'm not finished living yet. Besides, you know the old saw: I can do more to change the ARRL from within than from the outside.

For one thing, I can air my gripes here.

For Pete's sake, Len. You've been babbling here for years and many might like to dissuade you, it hasn't yet worked. No one can bar you from expressing your opinions even if we don't share them or like them. I, for one, reserve the right to call you a fat head if I disagree with your views. That's the other side of free speech. Being able to tell you that I think you bring little to the table is MY right.

Where is it mandated that I must be any more "politically correct" in putting forth my disagreement with something you might have written? Political correctness is another way of dancing around what one really means. Folks are worried today about damaging the self esteem of another. I'm not worried about your self esteem, Len. I would be most interested in hearing you explain how the amateur radio service is doing anything close to illegality or against the principles espoused in the U.S. Constitution in disageeing with the views of Leonard Anderson.

Wrap yourself in the flag and get up on that soapbox, Len. Strike a pose while I snap a photo. I'm sure that Ed can arrange to have it appear in an upcoming issue of QST.

There always has to be a comedian in every group. :-)

There is a guy around here who says "QSL" all the time. Its not that he can't hear, he's just too drunk to understand what anyone is saying.

I'm not sure that I would say anything in front of my mother. She has to be the most opinionated person in the world (critical of everything). She cannot even stand herself. :-)

>   the station in 1963 but it was out of service by then.

According the APCO (Associated Police Communications Officers) manual for 1945 (which I have before me) the Los Angles PD at that time had a radiotelegraph station that operated on the frequencies of 5135, 5140, 7808 and 7935 kc, operating under the callsign KGPL.

I find no mention of radiotelegraph capability at CHP Sacremento in the 1945 manual. BUT- evidently considerable change took place by 1951, as shown in the '51 issue of the APCO manual, which I also have. It shows PD Los Angeles active on channels 'A' through 'I', with the callsign KMA89.

Channel A was 2804 kc, B = 2808, C=2812, D = 5195, E = 5135, F = 5140,   G = 7935, H = 7805, and I = 7480 kcs.

The 1951 APCO Handbook edition also shows CHP Sacremento with the exact same capability, under the callsign KMA25. Both stations were licensed for interzone (outstate) traffic handling, and were the only California stations so licensed.

I know that at some later time the interstate traffic contact point was assigned to CHP SACTO, no doubt by agreement beteen the agencies. But, contrary to the belief held so dearly by Mr. L.H. Anderson, Los Angeles PD did indeed use a radiotelegraph station to handle important traffic pertaining to the police business well into the second half of the twentyth century. And you were right - SACTO was the CW node for California, solely later in the era.

As was the case in some heavier populated states, California had a in-state teletype system that distributed the outstate traffic recieved by CHP SACTO. Any traffic routed out of state also had to be teletyped back to SACTO who then placed it onto the CW net for out of state routing. I'm sure the volume of in-state traffic handled justified the statewide tty system.

In contrast my state used CW at each of the nine district stations, each of which could communicate direct to other states, even to SACTO, usually via the relay station at Flagstaff, AZ. The CW net was replaced by TTY in Missouri in 1964, and the CW gear ate the station where I worked was uninstalled in late 1965/early 66. Flagstaff remained in operation until around 1972, according to a ham who was a former operator there. See:

http://www.metronet.com/~nmcewen/police_radio.html

As an old street cop that may be of interest to you if you haven't already read it.

And the MHP HQ station relayed CW interstate traffic for other states until about that time. I was later a part of the technical crew that removed all the CW gear from the state HQ station in 1975. By '69 we in Mo. had a computer terminal at the operating console.(It was an early RCA, but it worked quite well).

Another contrast. Visiting in Fresno in 1980, I noticed a CHP District Office nearby and decided to pay the radio staff a visit, and look over the operation.

What I found made me glad I lived and worked in the Midwest. Discussing operations and conditions with the non-uniformed personel (I was uniformed), I learned that my salary was at least 50% higher than theirs, they were not career personnel, (one was a retired bomber pilot, another a sheriff deputy's wife, etc). I asked what level of FCC license they were required to hold (we all held either first or second phone) and they asked "What's that?" When I asked them how they made an NCIC check, they pointed to an ancient TTY terminal over in the corner of the room - they had to send a TTY message to SACTO, where it was entered into the computer system, and the answer returned in the reverse, time consuming fashion. At home I had the keyboard and screen in front of me and got very quick responses.

I came away disappointed.

Dick

Hansl:

Don't look now, but the ARRL just upped membership dues. The
black helicopters are back in the budget. Just wish they'd get a
few Black V-22 Ospreys!

I agree with that but the other side of it is the explosion of the parts count, you know how that goes. I have a somewhat elderly Icom 2m FM mobile xcvr, the two incandescent dial lamps burned out. With the help of a thread I launched in .equipment which drew a half dozen posts I tracked down the lamps and was told I should expect to be a soddering arn micro-neurosurgeon for an hour if I try to replace the lamps myself. Two lousy little panel lamps. Screw it, I'm using a flashlight. Ask me if I'm ever gonna dive into my ten-gazzilion junction HF xcvrs.

The only of those which really matter are very rarely encountered spurious outputs and garbaged signals, easy to check with the spectrum anlayzers we have today which didn't exist back then. But it's still back to the shop to get it fixed.

DX news in any monthly magazine is useless, it's at least six weeks stale.
I get the ARRL DX bulletin every week. Beats the hell outta the Yellow
Sheets and it comes along free with the membership.
>

I'm sure the satellite guys, the NTS crowd and whoever are also grousing
about "inadequate" coverage of their personal hot buttons. It's unreasonable
to expect to pack "adequate" coverage of every niche specialty in as diverse
a hobby as ham radio into one magazine for forty bucks a month dues. QST
does a decent job of going down the middle, end of.
>

> are minimal. If I wasn't already a life member I'd have think hard to

Fifteen years ago when I was into ultralight aviation I was paying $40/yr
for a 35-40 page newsprint rag published by an FAA Part 105 advocacy group
which never accomplished anything for all practical purposes. Back when a
maxed-out Honda Civic was $7,500. Eleven cents a day is cheap for what the
ARRL does for us.
>
Yeah, I should have bought a life membership when they were $150.

>From: yodoc@aol.comnospam (Larry Roll K3LT)

>Just exactly how "slow" a "learner" should we hams tolerate?

I don't know. What time limit does Part 97 place on learning?

> When told, once, that use of terms like "handle" and "personal" are not generally accepted on the amateur radio airwaves, how many infractions must be permitted before the newcomer can be "set straight" in no uncertain terms (preferably off-the-air)?

What does Part 97 have to say about such "infractions?" What does the US constitution have to say about such infractions? I think that 99% of those who use the "wrong" lingo on the ham bands will come around on their own; I feel no need to "set them straight."

> To use a different example, how many "yield" signs must be posted at one intersection to actually induce the behavior of making the motorist yield to oncoming traffic?

Yield signs are a matter of law. What is the law about the use of the word "personal" instead of "name?"

> Obviously, a reasonably fast learner will
only need one; but you apparently
> seem to advocate an unlimited number of "yield" signs at each intersection,
right?

I advocate that the number of yield signs can be determined by law. You
advocate that the choice of words people use should be determined by your
personal tastes in what you want to hear. Which one of us is on higher moral
ground, Larry. Do you think I should be be able to "set straight" those who
excerise their right wrt other parts of our Constitution? Why do you think that
the right to bear arms is sacred yet the right of free speech is sacred, as
long as you don't hear a word you don't like in a particular context?

>To which I would reply, "Be my guest -- don't let the door hit you in
>the ass on the way out!" But getting back to this "caring, sharing
>community" crap, Ed, just what *was* Mother Teresa's call sign?

Hmmm, is that sorta' like "politically correct?" I guess I have a bit more
faith in hamdom that you, do, Larry. I hope you are not surprised that you
have only a handful of loyal followers...

>Neither did I, Ed, because I made relatively few "gaffs" (sic).

:-) LOL. I think I will end it on that note. It says more than I ever could.
:-)

>I can't imagine why the ham demograpics would be so different.

I can't either, Brian; Manchester was a typical middle class town. But unless other students were hams and didn't tell anyone, I know of none other than Roy, WA1DOI.

>Maybe it had something to do with the heavy concentration of the
> electronics industry around here in that timeframe.

That might explain it; the Hartford area was primarily insurance. The main industry was aerospace, with the emphasis on aero. My dad worked at Pratt and Whitney, a major manufacturer of jet engines.

>800 bucks doesn't sound "economical" to the average amateur or does it?

How much does the average ham station cost? That might provide a reasonable
scale by which to answer your question.

>> the easiest license to get in Ham Radio history.

>The old Novice was the easiest.

As unexpected as it is, you are correct and "everyone" is wrong. That mid 60s Novice was as simple a test as I could imagine. (If anyone missed the post on the ARRL study guide for the Novice, email me at w1rfi@arrl.net; I will send you a copy). The study guide had 39 questions. There were no questions on antennas, feed lines propagation of any electronics past Ohm's law. I laugh my self nearly to death when I see people post they the Tech test is dumbed down from the good old days. :-)

I am not sure that I do, Aaron. The scope of the tests is a lot more than it was in the 50s and 60s. What impact does that have?

I think the real question to ask is what percentage of the US population were "technical hams" in 1960 as compared to the percentage of US population that are "technical hams" today?

>Do you think this downward curve of technical hams will ever turn
> upwards again?

It will if I can help it. :-) The ARRL Tech Info pages at http://www.arrl.org/tis are pretty popular.

>From: Brian Kelly kelly@dvol.com

>"Feelings" don't count. Only the dollars and cents budgeting & accounting
>spreadsheets count and those have not been posted here, we don't have a
>clue.

I don't have the details on the budget proposal, other than the Lab budget. But I do know that the decision has been reached over the past year to add more staff. The ones that I feel are most valuable are being added to address what I have seen as problems that the ARRL needed to address.

One staffer added late last year is someone to work on developing "in-house" news. I have seen again and again where someone at ARRL HQ has done something valuable and important for amateur radio, and not told anyone other than his boss. That "someone" has all too often been me.

Just as an example from my own work, I think that ARRL has been negligent in not telling its members that the ARRL RFI Task Group met in Allentown, PA and made a recommendation that ARRL staff investigate illegal Part 15 devices that operate in our ham bands and to select some cases to take to the FCC. (One of several action items.) I actually wrote up part of that meeting, but got on to other things.

Those other things included the tests that I did with some representatives from HomePlug on the home-networking products they are developing to use residential electrical wiring in homes to network computers. Ditto on similar work with the Home Phone Networking Alliance and the VDSL standards committees. I have

this partially written up, too, but just can't find the time to put it all together.
That in-house reporter is starting to do just that, filling in the gaps in what I am able to and can find the time to do. IMHO, ARRL members have a right to know these things and I feel that ARRL has not communicated with its members as well as it should. That staffer is one way to address it. Right thing to do, or should I do a few less things and take more time to tell folks about them, or keep the lines of communcation closed? I think the League has been negligent in not reporting these things and I hope to see improvements.

The Education and Certification program was added last year, as well. With all of the real and perceived inadequacies of the testing process, it is important that hams have as many ways to learn as possible. ARRL already publishes a lot of good books, but those who are going to learn on their own from books are already doing so. A more formal approach was wanted by some, and some documentation of the demonstrated abilities of hams will be an added plus.

The ARRL Web page has been increased by quite a scope over the past years. Do hams use it? Should the League stop adding to the Tech info pages? I could let the Tech Info Coordinator go to help pay for the staff I am adding to help with the growing problem of RFI to hams. Who wants to make the choice?

These are just a few examples; I can't supply all the details for things outside the Lab, but wanted to offer a snapshot of some of the reasons that more funding is being sought. I do recall that for this year, the budget is not balanced. There is some investment in the future; the future of doing more things for the overall benefit of ham radio (RFI, education) and some investment in staff that will help develop other sources of revenue that will help the ARRL do more without having to tap into the membership with dues increases.

What I don't think is fair to ARRL members is that much of this increase is to fund things that are not individual membership benefits but are for the overall good of Amateur Radio. They are being done for all hams, but are being paid for by those who are willing to pony up dues dollars every year. I hope that the realization that supporting things like the RFI program and education and Jim Haynie's Big Project and other things IS important will bring in those who are now standing on the outside.

I pay over $100 a year to belong to the IEEE. I pay over $30 a year for some of my non-ham magazine subscriptions. I will gladly pay this dues increase as well, as long as the League comes through on its promises to do those things it is setting out to do. And tells me about them. Even working at HQ, I find out things long after the fact sometimes. :-)

Actually, I just realized, I have put off the devil a bit on the dues increase. I just renewed my membership for 3 years, at the current rate (plus a multi-year discount). The dues increase is going to go in effect in July, so if you renew before then, you can get in at today's rate. Maybe by the time you have to pay the higher rate, you will decide it is worth it. :-)

Huh? The new rate represents a per-annum increase of about 3%.

> I think most folks would gripe about five bucks out of
> their pockets when they get nothing additional for the fiver.

For the past few years ARRL has been increasing some direct services to members and dramatically increasing expenditures in advocacy areas, as threats to amateur spectrum rise. During that time there has been no dues increase. Now one is needed in order to maintain and increase those activities. In other words, the dues increase is in part to help offset the costs of benefits -- direct and indirect -- that have already been added, and in part to help fund future increased activity. (Such as a new Lab employee to help Ed Hare with EMI/RFI matters.)

The statement that "they get nothing additional" simply overlooks the additions that have already been made and those that are planned.

Jon

Thanks for the 5H3US QSL that recently arrived.

My views on the increase? Cheap at twice the price.

I am constantly amazed at the amount of work that my membership dues accomplish for amateur radio. Many of the programs of ARRL benefit all amateurs, not just members, so I accept the fact that my dues help fund things beyond the benefits which accrue to me individually. Sort of like if AAA Members (rather than all vehicle owners) funded highway maintenance in my state.

I sent an email to the VE and he offered to let me take
the extra class exam in February for free. That's fair
enough for me; it gives me more time to study!

Hey, great!  And do they have any openings for jack-booted thugs?
You and I could apply.  I'm sure Cecil and Brian would give us
glowing recommendations.

Man, you 60's guys had it TOUGH! My 1955 edition (yes, I still have it) has only 33 study questions, but it does have electronics questions about chokes and various LC filters.

Isn't the statement really saying that the ARRL is not seeking to change the US regulations at this time? It will be at least 4 years away before the FCC would even consider a change, looking at the timing of the WRC and estimating the amount of time it will take to ratify the treaty. I think that it is premature to set a policy now on a matter that cannot be changed now and that can be decided better when something specific can be put on the plate. A lot can change in the membership, in Amateur Radio and in the makeup of the Board in the intervening 4 years. It is, IMHO, up to a future Board to change or affirm its policy wrt US regulations when it appears that it is time to act. The present policy simply does not change the status quo wrt the ARRL policy on US requirements. Considering that no change in policy can effect any change in US regulations, I think the Board made a reasonable choice.

The Board dealt with the international treaty now because now is when the decisions need to be made.

IMHO, of course.

Hmmm . . mixed reaction here to that one. I've been involved with much bigger and
scattered industrial operations which have in-house infranet webs which do a
pretty
good job of keeping everybody up to speed, departments & individuals have web
pages, etc. Of course you wind up with at least one IS person and they don't come
for free.

Tough call because you can't hang a dollars & cents value on it like you can in a
commercial operation. All ya can do it try it.

> I think the League has been negligent
> in not reporting these things and I hope to see improvements.

>
That should be SOP for a non-profit, not a good idea to keep the dues-payers in the
dark about the dollars. But then that opens up the prospect for members nit-picking
expenses.

Feelings=perceptions and in this case perceptions of the ARRL most
certainly count. If the League desperately needs the money to do

something which appeals to the membership, a better selling job needs to
be done.
>

On air reports might be stale. Photos and personalities don't get
stale. News of upcoming operations would be interesting. So would
writeups of operations just completed (along with even more photos).

> I get the ARRL DX bulletin every week. Beats the hell outta the Yellow
> Sheets and it comes along free with the membership.

I'm really not discussing band activity reports. I get the e-mail
bulletin too and find it sometimes useful.

> >

The magazine has been stripped of real content, not just in my areas of
interest (which are many). I suppose I can always read how to wire a
DPST toggle switch in "Ask The Doctor".

I'm happy that you're happy.

> Yeah, I should have bought a life membership when they were $150.

I got mine when it was at (I think) $275 (1977?). Wisely invested, that
money along with the money received from others who invested long term
in the ARRL should have produced a good return.

Never much thought about it before but that could very well have had a lot to do
with it. The father of one of the two kids I was closest to was an EE manger with

Philco and had been ham when he was a kid, the other's father was a Navy lab type
who had a ham ticket. Dunno abt the rest. The neighborhood ham club membership was
at least 3/4 Navy lab employees.

I know that place well, been to the East Hartford plant several times and to the
Palm Beach County facility twice. The Florida operation is mind-boggling, 50,000
acres or some such, world's largest private wildlife preserve complete with it's
own 9,000 foot runway. Aerospace alligtor farm. They do the military engines
including the black boxes, "by invitation only" . .

But it reads more like diatribe from someone who can't get his way, therefore will find ANY excuse to denigriate and antagonize those whom he hold's responsible for HIS angst.

You're just a creep with an attitude, Anderson. Every once in a while you start to act human, but then you slide right back into the "all Hams are brownshirts" routine.

You change the tune from time to time, but the lyrics are the same.

Ed,

Be assured that I shall. I hope that he will be more receptive to
views of membership than former Director Kanode.

> hams these days...

Exactly. Any "ordinary" ham who attempts to dig into his TS2000 which has anything more than a operational glitch that might be corrected by resetting the microprocessor, or some other minor correction, is asking for more trouble than he really wants. And the problem here is not just that hams don't commonly possess technical knowledge and skill, many do. Even electrical engineeers know that there is much more to it than technical knowledge. Skilled technicians are sent to intensive school training on specific pieces of radio equipment for thorough familarization with those specific units. Been there, done that. You need specific knowledge, specific skills and specific test equipment with the attendant experience on how to apply them all.

I would very carefully limit my incursions into my Icom 756 should it fail. I haven't been through a specific course in that transciever. That doesn't mean I wouldn't do some serious investigating to see whether or not I might be able to learn enough to fix it myself. I bought the service manual for that purpose, as I always do. I even disposed of a perfectly good IC761 because I couldn't get a service manual for it, Icom America told me it wasn't available. But there is definitely a point beyond which I would not go, and away to the factory service center it goes.

I hope some of that money finds its way into funding for remedial math
skills for you, Jon. $3.40 would be a hike of 10%. 3% would be $1.02.
Now how much would a five dollar hike be?

During the past few years the League has also begun charging for
services formerly included at no extra cost to membership. The price
for other services has risen dramatically.

If I have a business and find myself with fewer customers (members) and
less business I don't suddenly begin an expansion program; I find ways
to cut costs--maybe even terminate some employees. It is not likely
that I suddenly increase the price of my products by 17 or 18 percent.
The business which took such a tack would likely find itself with even
fewer customers (members).

Glad you received it. I've been back for six months and WA8JOC is STILL
cranking out the cards. He just received direct requests for QSLs from
my J52US and 9L1US days going back to the late eighties/early nineties.
I'm still at work on the antenna farm here and am hoping that everything
will be complete some time in the spring.

I think the League should do a better job of informing the membership as
to what it is doing and what the costs are.

> Sort of
> like if AAA Members (rather than all vehicle owners) funded highway

I'd love to see your roads. Here, the state collects the taxes and
pretty much ignores the road maintenance.

Randy, did you post this just to read your own stuff, or do you really believe it?

I do agree in part that CB and FRS are consumer oriented services, however the NG "alt.radio.family" and the stroies realted by "QRM" and yourself only validate my assertion that these services are just as much a "hobby" and Amateur Radio.

Of the shelf or not, you CANNOT convince me that the bandedge-to-bandedge noise on 11 meters is just people using a radio as a tool for thier business. Just taint so.

And I DO monitor FRS, especially in the ATL area, and I can tell you that there are a LOT of people using FRS for the sake of fun with a radio...NOT just to facilitate some other activity.

Per-annum, Dave. You know, the same basis on which inflation is usually stated.

What has been the *total* (not annual) inflation rate since 1997?

Not that adjusting for inflation is the sole factor involved. As one example, QST postage has risen twice since 1997, for a total of something like a 20% increase. (Don't quote me on that number since I'm working from memory, but it's in that ballpark.) That isn't reflected in the CPI.

Direct fees for some services have been added or increased, but that's not true of others, particularly those that aren't delivered on an individual basis. The net result has been an increase in costs that aren't recovered by fees.

> If I have a business and find myself with fewer customers (members) and

> to cut costs--maybe even terminate some employees.

Thereby reducing service to your customers, driving customers away and possibly entering the classic death spiral of an ever-diminishing customer base.

> It is not likely
> that I suddenly increase the price of my products by 17 or 18 percent.
> The business which took such a tack would likely find itself with even
> fewer customers (members).

I'm sure some members will find $39 too high. I'm sure others will evaluate what ARRL is doing for them and decide it's worth $39. There's no point in arguing the ratio here since we'll know soon enough.

Jon

Well well...a challenge. Hmmmmmm.....This will take some pondering. One is, what good will it do....??

Of course, I am not the only one who challenges Lennies "facts", and I know that it requires no further re-posts of that already stated. But if you insist.....

However, this one will cost you dinner for two at a restaurant of MY choice, and I DON'T eat cheap. And trust me, I don't make that kind of offer unless I am sure it's YOUR plastic that's going to be crunching the invoice.

Game time?

While I am disappointed that the Board so vehemently defended Morse testing in the US in their resolution, I understand their reluctance to deal with what is basically a non-issue at this time. First things first, we will hold the League's feet to the fire to -enthusiastically- support and foster support in Region 2, for elimination of S25.5 at WRC2003. Then, in 2004, we will have another go-round on the US testing issue. By then, the opposition of many of the Board hard-liner PCTA's may be a dead issue, literally.

Ya can't cover the 'tests as well in QST, the thing would become huge, ditto all
the far-end technical material from QEX. Can't combine three magazines into one
for the same money as one of them.

Now, now! There's a problem: Over the years big gulfs have been created which
didn't exist in earlier days. One one hand we have old fart 20wpm Extras like
thee and me who have done it all on one hand and new-wave noclues some of which
really don't know how to wire a DPST switch on the other hand with QST caught in
the middle. It's just a no-win situation.
>
Hams were bitching about the ARRL , the dues and QST content a half century ago.
The good news is that we're consistent and predictable.

Huh??? $5 as a percentage of $34 comes out to be 14.7% on my Casio.

14.7% PER ANNUM (over 4 years), Dick? Your calculator's broken. Or maybe
it just needs a new battery.

Looks like about 3.5% per year to me, except we paid no increase in
the intervening years, so we saved $7.31 over a yearly 3.5% increase,
plus we can still save even more if we renew (for 1, 2, or 3 years)
prior to July.

1997 - 34.00 Baseline
1998 - 35.19
1999 - 36.42
2000 - 37.70
2001 - 39.01

I will say this - the existance of the ARRL web page will play a large
part
in my decision on whether or not I want to remain a member. That is
probably the most useful tangible thing that ARRL has done, outside of
your ongoing efforts in RFI/EMI, in recent years. I do get a lot of use
out of it.
Its expansion should definitely be encouraged.

I hope so. I just wrote a short E-mail to George Race (Great Lakes Division
Director) asking that the ARRL board reexamine the issue of
retaining/dropping Morse Code testing when it is finally dropped from the
ITU treaty requirements.

Yeah.....while you were away the infamous No CW Testicles has adopted
what he percieves to be the end of a CW qso as his concluding byline.
Just makes him look even that much more ridiculous. He has been told
that is it actually
dit<space>dit but of course as usual he ignores all advice. And also of
course he he has no idea what it means.

Haven't looked at a TS2000 yet, but I bet an amplifier is still an amplifier, a power supply is still a power supply, and components still smoke or blow fuses when they fail.

I spent the $35.00 for a "Service Manual" for my Icom 775DSP, and have saved myself 3 shop calls with simple troubleshooting similar to what I did way back when on my Hallicrafters SX-101. Voltages are lower, and components are smaller, but the electronic theories haven't changed much.

Wouldn't go mucking about in the DSP logic, etc., but the old "7-Step" troubleshooting protocols still work just fine on the rest of it.

My "instrumentation" consists of only a Fluke 76 DVM, a Techtronix 5MHz dual trace scope, and and old HP-300C signal generator.

And I think I'm a pretty "ordinary" ham. Lotsa guys are much better!

Hmmmmm..... yes, 14.7% per-annum certainly would be outrageous -- more like $58.85 (not $39.00). 'Cording to my TI the actual increase was almost precisely 3.5% per-annum, except they skipped some annums, so we actually saved $7-and-change in the interim.

Don't worry about it, Larry, this is just their "interim" position, which they have adopted as they move from complete support of CW testing to its complete abandonment. Can't make any sudden, sensational and upsetting moves, you know. Might upset someone. Walk that tightrope.
Actually, I don't see where it matters more than trivially anyway, since FCC today pretty well ignores ARRL.
Hang around long enough, you'll find out how it works.

You were talking to dispatchers who, except for very small departments, are non-sworn personnel in California.

All technical work (system design, installation, and
maintenance) is done by techs of the State Department of
General Services' Communications Division, who, in spite of
"license deregulation", are required to hold FCC GROLs because
their duties also include servicing and adjustment of marine
and aviation stations licensed to the State.

>When I asked them how they made an NCIC

IIRC Fresno was one of the "tail end" offices in the conversion
that was taking place at the time. It's all high-speed computer
now, with MDTs in the patrol cars.

> I came away disappointed.

I, too, was disappointed when I visited the Sacramento office in
1963, but I later found out that although this was where the
CW station was, it wasn't the HQ comm office, but the local
patrol office. The HQ comm office with all the terminals and
statewide remote-access panels was two blocks away in the big
HQ building.

I'm glad you did that, and I'm glad he did that. That's a good
resolution. I wish it hadn't happened in the first place, but this will
work out. Thanks for not giving up on it.

LRod

'Tis not my calculator that is broke, $5 is 14.7& of the %34 *annual*
membership fee.
 Looks like an attempt to invoke New Math as yet another Newington Smoke
Screen. Doesn't work any better than it ever did.

This is one of the reasons I don't hang around rrap much any more -- too
many people like Dick who (willfully? ignorantly?) misinterpret simple,
direct statements and then use their misinterpretation as "evidence" of
unethical behavior on the part of the other party. Guess my stomach for
idiocy like this isn't as strong as Ed's.

R.L. Tannehill, P.E. <rickw7rt@firstinter.net> wrote:

> While I am disappointed that the Board so vehemently defended Morse testing in the US in their resolution, I understand their reluctance to deal with what is basically a non-issue at this time.

I think the "at this time" language in your post and in the resolution is pretty important. IMHO, the Board is saying that it will leave it to the correct time to deal with the issue. I believe that to be the correct choice, for a number of reasons.

The only reasons to have dealt with it now would be if the US regulations were on the plate now -- they are not -- of if the ARRL Board had made up its mind now about how it wants the ARRL to handle a not-completely-defined issue that will probably come up four, or more, years from now.

> First things first, we will hold the League's feet to the fire to -enthusiastically- support and foster support in Region 2, for elimination of S25.5 at WRC2003.

There is a wide range of ARRL response and position to the policy set forth at this Board meeting. It could indeed range from "enthusiastic" to simply no longer being the only dissenting vote at an international IARU meeting. Constructively holding ARRL's feet to the fire, in either direction, will indeed influence the implementation of ARRL policy.

> Then, in 2004, we will have another go-round on the US testing issue. By then, the opposition of many of the Board hard-liner PCTA's may be a dead issue, literally.

I hope not. I would rather see an evolution of ideas and constructive change than see people die to give me my way. My views have changed over the years, as I imagine yours have; I would imagine that at one point in your life you believed that Morse code testing was important to Amateur Radio. I hope that as more hams are able to assess the impact of the changes have taken place to date that we may see more changes in the way people feel. We all have a few years to give our "final answer."

Mea culpa -- by "in house" news, I meant more information about the
activities of ARRL being shared with our membership, through the Letter,
Web, QST, etc.

In any case, the present Board cannot commit that future Board (which
may, for all we know, be a completely different group of members) to a
particular policy. There is no policy the present Board could adopt
which that future Board could not reverse, just as the present Board has
just reversed the policy (WRT the treaty) of past Boards.

It's true - so far I haven't done anything to send up the red flags.
Knock on wood.

But personally, I'm glad they vigorously collect the government revenue. I for one, am reasonably reluctant to give up so much of my money to them. I imagine there are others who are even more reluctant to do so. If tax money was gathered in a donation-like process, I'm quite sure we'd always run the government in deficit.

I think the people who want high taxes should pay them and the people
who don't want high taxes should pay less. In other words, tax the
liberals at a higher rate than the conservatives. Then count the
number of liberals. :-)

> I have not read much in the press about the failure of emergency
devices in
> emergencies. Do we need a media coverup to make this all plausible?

Well... My take on the press, is that they don't even know that the water is cold until they run into an iceburg, and even then they get the color wrong. But that's another story.

The problem with gadgets and emergencies, is that you need a real emergency in order to test their efficiency. I have been involved both professionaly (LMR) and in RACES (off and on depending on political currents) since the Civil Defense days, and currently support US Army MARS. The simple gadgets that are highly adaptable, like an 8' Crecent wrench, are the most useful when compared to highly technical gadgets like uP controlled radios and data terminals. Multi-channel radios and programmable radios often present a problem for people who only bring them out of the back room twice a year. Even Fire/Police/Rescue people may find it difficult to talk to one another even if they have a common frequency because they might not be able to find it in their 100 channel radios.

I'm not talking about things that are broken or worthless from the start (there are those) Rather I'm talking about things that don't get used in real emergencies either because they are not adaptable to the emergency at hand, or because the available personnel isn't familiar or the equipment isn't intuitive enough.

Ham radio operators are supposed to bridge the communications gap in emergencies for those who are trained in other areas, by being resourceful with both operating and technical skills. One of the most common failures I have seen is when the equipment or propagation aren't up to the task, or the operator is unprepared to handle signed written traffic. We are valuable because we can make use of what survives the disaster, not by how well we can raid ham store shelves.

Jim, ac6tk

I've often thought exactly the same thing. An excellent idea - and very fair. The only problem is that the liberals don't think THEY should pay more taxes - it's only the OTHER guy who should pay more taxes.

We're discussing a rebellion against the US government, not the one that started the US government. Maybe I'm wrong, but one seems at odds with the other. Or are we just talking rebellion for rebellion's sake here.

You're seeing black helicopters again, Dick. The next board may be made up of completely different people. Do you think a completely different board will carry on your anti-code-test conspiracy alleged above?

If you believe your opinion to be the majority opinion, it shouldn't take too much work to load the next board with pro-code-test people. OTOH, I suspect you realize that your opinion is held by a very small minority of hams and is doomed to be buried in the sands of time.

Is a one year ARRL membership fee going from $34 to $39 or is it
going up by one dollar each year for the next five years?

Percentage increase = 100*(increase/present-cost)

If the increase is $5 and the present-cost is $34, then that's a 14.7%
increase from one year's subscription to the next year's subscription.

You just don't seem to understand.  Maybe you should ask some of your
amateur radio friends what the word "hobby" means as it pertains to
amateur radio.

I was disappointed that the BoD display this "go with the flow - wait and see" attitude. Having sat in that room in the past, I know that boldness is often punished, but this seemed like the perfect time to display some leadership and vision.

Opportunity lost. Sigh!

Yep. But that wasn't the topic being addressed, which was a comparison
of the dues increase to the rate of inflation. To compute that you need
to include the term over which the increase occurred, which is 4 years.
Your calculation ignores the lack of increase between 1997 and 2001 and
thus fails to address the question.

Figures don't lie, but...

Jon

I am not as concerned with the content, as getting the air time. I live south of Atlanta and have never seen a PSA on ham radio on any of the channels I watch. I am a night owl by nature, and some of the PSA's used to fill time in the wee hours are covering some really inane subjects.

This week, just for grins, I will make some inquires to the stations in Atlanta and Columbus to see what is necessary to get them run.

I believe we are talking about a rebellion to restore U.S. Constitutional
government.

It went up a $1.25 a year in 98, 99, 00, and 01, but the increase is
not imposed until July 01.

A membership cost increase is a step function like a binary bit going
from 'zero' to 'one'. It didn't happen over a number of years. It's
a step function that happens at renewal time.

Is there any difference in having one double-scotch per day for a week
VS not drinking for six days and then having seven double-scotches?
"But ossifer, I only averaged one double-scotch per day."

But the inflation it was being compared to is an average over time, so to make any meaningful comparison you have to compute a time-average for the dues increase over the same period as used for the inflation computation.

Really? Since you seem to know all about this, what happened to the US
Constitutional government that made a restoration necessary in the first
place? These ground rules were never actually established. Larry just
said that it would be okay for 10,000 people with guns to attack the
nations Capitol (he then added that that wouldn't be the case if they
were people who he didn't happen to agree with).

I think that we are approaching the same idea from two different directions.
(Imagine that!) Most of the "high-tech" folks will enter ham radio whether
we have a test that is very easy or one that really taxes them. The number

of highly technical hams is not apt to change.

Sure it helps. It helps to understand that the only possible reason for
computing it that way is to avoid stating up front that membership fees
are going up by 14.7%. Professional accountants and other bean counters
excepted, of course.

Dick:

Uh, don't look now, but I still fit into my old Air Force uniforms quite nicely! I seem to have managed to avoid the seemingly inevitable 30 - 50 lb. weight gain that seems to immediately afflict most retirees. I also have not adopted the pony tail and scraggly beard, either. I could report back for duty on any given day of the week, assuming I had *current* uniforms, since they've changed since my retirement in 1994.

Ed:

It may be a case of "We can't afford *not* to!" How else are we going to get national exposure for our hobby? And what happened to my idea of amateur-licensed celebrities being involved in the process -- donating their time, talent, and industry influence to assist with production?

>What percentage of people that might be interested in ham radio do you feel
>do not know about its existence?

At least 80% of the general population probably don't have a clear
idea of what the thing called "ham radio" is about. The rest, if they
understand the basic concept at all, are probably more likely to
confuse us with CB than they are to have an accurate picture in
their minds of ham radio and what hams do.

Ed:

There is no need to concern yourself about me. I am no longer involved
in amateur radio instruction. The licensing requirements are so
dumbed-down now that I don't want to be publicly associated with the
concept that prospective hams may actually need assistance in
meeting them. That, IMHO, would be an insult to the intelligence of
the general public.

Ed:

Well, I disagree on this one, partly due to personal experience. I've always been one of those "Math-challenged" people -- my father is the same way. I had to take a "Math for Dummies" course at the local community college in order to fulfill the requirement for my Bachelor's degree. It was a self-paced course, and it took me two semesters to complete it with a grade of "B" -- the highest Math grade I ever received in my life. Ham radio, even the "old timey" written tests I took in the pre-VE days, did nothing to inspire me to learn advanced mathematics to the point where I can exploit that knowledge on a daily basis today. For this, and a lot of other reasons, I don't think ham radio can be the educational salvation of an already illiterate person. If it wasn't enough of a motivator to make me a Math-capable person, I don't have faith in it being a motivator to make a person able to read and write, either.
Moreover, my personal preference would be to steer the

illiterate AWAY from ham radio, in order to demonstrate that gaining literacy skills MUST take priority over hobbyist activities. My reasoning is that a person who learns to read only to pass their ham radio tests may throw that skill away once they barely succeed -- much the same way Morse code skill is discarded once HF operating privileges have been attained. The fact that a ham radio ticket is an "end game" to the learning process for many "hams" means that to me, it doesn't seem like the powerful educational tool some hams claim it to be.

No Ed, I talking about before the FCC issued its NPRM for
WT Docket #98-143. The ARRL had setup committee
to study license restructuring, the committee recommend
changes, but the Board reject all three motions.
Bad decision, had they followed committee recommendation,
the FCC probably would have adopted it, NCI would not have
been formed or been motovated to act. As you say, that all
history now and can not be rewitten.

> > The FCC's Report and Order said that Morse code exam

January 20, 2001

> NCI agreed that a 5 wpm test was needed to satisfy the treaty?

No, NCI ask for no code exams, but conceded that it may not
be possible for the FCC to take that action, and reccomend in that
case that only a 5wpm test be used until S25.5 is supressed.

> Now? Can you tell me where and when
> the ARRL communicated their "demand" to the FCC?

Strike demand; insert influence, lobby, comment, recommend, etc.

> The language of the ARRL policy was clear enough
> to me that the League is choosing not to change its
> policy wrt US testing at this time.

How does that serve the public interest and
the interest of members that oppose the
Morse code exam requirement?

What purpose is served by the Board using
all members due against the say a third of the
member interest?

> You are misrepresenting facts, Larry.

No, Ed you just do not like the true facts.

Yeah, the League should have just come out and said that the dues went up by $5 and not tried to hide it. Maybe we can get them to rewrite the news story to just say that they went from $34 to $39 a year.

Dick, Jon's initial statement was made in response to Dave's claiming that the dues increase had exceeded the rate of inflation. In that context, what he said was perfectly accurate and useful. He didn't say it hoping to confuse you. You did that part on your own. :-)

and you have refused to provide it. What am I to infer from that?

> I'm sorry you are so bored that you have
> to spend time trying to "get other people's goats".

And I'm sorry you won't condemn code-tested hams who use Morse code

equipment for jamming.

Larry Klose <lklose@net-link.net> wrote:

> > > They demand the FCC continue 5 wpm code exams.

> > When? In its comments to the FCC for restructuring?

> January 20, 2001

Who authored the letter to the FCC? What form did it take? Why did not this action with the FCC appear in any of the writeup about the Board meeting that took place at the same time? This was not discussed at the HQ staff meeting that took place after the Board meeting, nor did any of my friends on the Board discuss it with me afterwards. Why would the ARRL ask the FCC to continue something that it is already continuing? The FCC has not proposed to change the rules. Are you sure you don't have it mixed up with something else? No matter, I am sure we will read about this secret demand -- I mean request -- on the FCC web page later in the week, if you are correct.

> > NCI agreed that a 5 wpm test was needed to satisfy the treaty?

> No, NCI ask for no code exams, but conceded that it may not
> be possible for the FCC to take that action, and reccomend in that
> case that only a 5wpm test be used until S25.5 is supressed.

Isn't that what I said? :-)

> > Now? Can you tell me where and when
> > the ARRL communicated their "demand" to the FCC?

> Strike demand; insert influence, lobby, comment, recommend, etc.

Okay, can you tell me where and when the ARRL communicated their recommendation to the FCC?

> > The language of the ARRL policy was clear enough
> > to me that the League is choosing not to change its
> > policy wrt US testing at this time.

> How does that serve the public interest and
> the interest of members that oppose the
> Morse code exam requirement?

It was not intended to serve the interests of anyone; it is a decision not to change the present policy at this time.

> What purpose is served by the Board using
> all members due against the say a third of the
> member interest?

If those figures are correct -- that you believe that 1/3 of ARRL members support the removal of the US requirements for Morse code testing, then what purpose would be served by using all members' dues against 2/3 of the members interests?

Larry, stop seeing the Devil behind the bush. Stirring up trouble where none exists will weaken the effect of the ARRL's position wrt the international requirement, don't you think? The League simply clarified to its members that its decision not to oppose the elimination of the international treaty is not tied in with its position wrt the US testing requirements.

> > You are misrepresenting facts, Larry.

> No, Ed you just do not like the true facts.

I do indeed like true facts, Larry; I just don't think that your reading all sorts of things into the League's policy is at all useful.

> > It does not reflect well on you or your goals.

> Personal attacks do reflect well on you.

Do you believe that all who disagree with you are "attacking" you. You are mistaken on that, too.

Perhaps it would have been more honest to just say that the dues were
increasing from $34 to $39 a year.

Probably correct. Are you saying that you feel 80% of the population are
interested in ham radio or did you read my question too quickly?

Did you get the answer to that clueless question right??   :-)

>Amateur Radio surviced

Amateur radio will survive the Bash like test we have today too.
That's not the question though. The question is: Do you think that a
test that allows people to pass without knowing the material is a good
test...

>In my own small way, I have made contributions.

There's no doubt about that Ed. Your accomplishments are outstanding ,
and I mean that sincerely. On the other hand, I've done absolutely

nothing for the ARS except use it. But what does that have to do with
our discussion on the merits of today's ham tests... :-)

If I may disagree Larry, it is difficult to decide not to read, once you learn how. It is impossible to drive down the street and not read a billboard or two.

This particular guy was never allowed to attend school because his parents were uneducated fundamentalists. He was told most of his life he was not able to go to school because he was mentally handicapped.

He originally came to the lessons at my house because his buddies did. When he was having real problems with the code, I asked him to come over by himself a few nights.

The stupid one was me! It took me three nights before I finally realized he was illiterate.
When I finally asked him if he knew how to read he was very embarrassed. I asked him if he would like to never be embarrassed again. Then we started to work on learning. I learned as much as he did. I did not know how to teach someone to read, I have that skill now.

Within a year he was reading at a 10th grade level and we went to the Knoxville Hamfest for him to take his test. He came out of the session with a ticket and you couldn't have wiped the smile off his face with a shovel. I was like a proud father and I must admit to a few tears rolling down my face in joy.

I do not know if ham radio was the motivator or the vehicle, neither do I
care.

Things would have to be a lot different than anything the framers of the Constitution ever imagined. I think they were trying to obviate the necessity for such things when they created that document.

But if it ever were to come to that, it sure as heck wouldn't be Brown Bess's and swords.

What I said was that it wasn't very different from the rate of inflation
over the same period. I didn't say it "wasn't much" of an increase. In
fact, I said that ARRL members would decide that question for
themselves. Why do you "spin" things to make them just a little worse
than they are?

> But the
> simple fact is that it amounts to a 14.7 percent increase each and every

If the topic had been the percentage increase over the $34 dues rate, I
would have used the 14.7% number. But it wasn't, so I didn't.

> Intended or not-and I fully accept that it was not-, your statement was

I hate it when people do stuff and then fudge the math to say they did something else.

If you got a pay raise for the first time in 3 years, do you divide the 10% increase over 3 years and tell your wife you got a 3.3% raise, or the actual 10% you received. That per year stuff may work for a bean counter but it is a 14.7% over my last dues for me.

Increases not made during previous years only enter the picture if you use the Clintonista type math. I am a big kid, I understand that dues increase, just don't blow smoke up my kilt and justify it with non-retroactive increases.

Well let's see...
Jon first calls Dick ignorant (among other insults) and then calls
Cecil a liar. I think everybody knew it was a 5$ increase. The
difference in opinion was in how the percentage was figured. Do you
think that Headquarters handled their part of the argument civilly??

Jon to Dick:
"14.7% PER ANNUM (over 4 years), Dick? Your calculator's broken. Or
maybe it just needs a new battery.This is one of the reasons I don't
hang around rrap much any more -- too many people like Dick who
(willfully? ignorantly?) misinterpret simple, direct statements and
then use their misinterpretation as "evidence" of unethical behavior
on the part of the other party. Guess my stomach for idiocy like this
isn't as strong as Ed's.

Jon to Cecil:
Figures don't lie, but... [liars figure]

I think I did; there was only one answer that had the word interference in it, if memory serves.

> >Amateur Radio surviced

> Amateur radio will survive the Bash like test we have today too.
> That's not the question though. The question is: Do you think that a

Already answered. Now if you will admit that the question is not at all related to amateur radio testing, I may answer it differently, right after I ask you why you keep bringing it up in threads about amateur testing it if is not related. :-)

> >In my own small way, I have made contributions.

> There's no doubt about that Ed. Your accomplishments are outstanding ,
> and I mean that sincerely.

No, I did mean small contributions. Much of what I have done is to

coordinate the learned work of others. Valuable, perhaps, but not
brilliant.

> On the other hand, I've done absolutely nothing for the ARS except use
it. But what does that have to do with
> our discussion on the merits of today's ham tests... :-)

The fact that I took a test in 1964 for which I did what I feel most people
are doing today -- a combination of learning, memorizing, lucky guessing and
skipping a few tough topics. I don't believe that the scope or difficulty
or relative learning of todays tests are easier than they were in 1964, to
the contrary; I believe that the difficulty is somewhat higher. Why would
you expect me not to discuss today's tests it the context of tests I
actually took?

Nor do I, Fred. I am sure he is thankful that you decided to be
"politically correct." Others would have not bothered because they "knew" it

Larry Roll K3LT <yodoc@aol.comnospam> wrote:

> Well, I disagree on this one, partly due to personal experience. I've always been one of those "Math-challenged" people -- my father is the same way. I had to take a "Math for Dummies" course at the local community college in order to fulfill the requirement for my Bachelor's degree. It was a self-paced course, and it took me two semesters to complete it with a grade of "B" -- the highest Math grade I ever received in my life.

Might explain why you think that everyone else memorizes tests without understanding. :-) The level of math on the General is being taught in 6th grade, though, Larry; it really isn't that hard.

> If it wasn't enough of a motivator to make me a Math-capable person, I don't have faith in it being a motivator to make a person able to read and write, either.

Fred told us the tale of his experiences. While I don't think they are typical, I think it also happened.

> My reasoning is that a person who learns to read only to pass their ham radio tests may throw that skill away once they barely succeed -- much the same way Morse code skill is discarded once HF operating privileges have been attained.

And you are reinforcing that by telling them that this is what they are supposed to do.

> The fact that a ham radio ticket is an "end game" to the learning process for many "hams" means that to me, it doesn't seem like the powerful educational tool some hams claim it to be.

"Many?" Care to put a percentage on that? (Warning, trick question!) I just don't accept the premise that most hams are becoming hams not to learn things.

You response left me in a dilemma Ed, I understand you felt I had done a good thing, and in your way acknowledging it was a good thing to do.

I was troubled by the "politically correct" remark. There was no politically correctness involved. It was one human being helping another, a ham mentoring someone who wanted to be come a ham.

This is the antithesis of "political correctness". Which is defined as giving lip service, to enhance ones standing with other like minded, ribbon wearing liberals, and results in little if any real change.

As the guy on TV sez, "Gimme a break!"

I do not support the destructive agenda of NCI. They are a splinter group of a few dozen loud mouths like Carl, Larry, Bryan, etc., snapping at the heels of the Amateur Radio service, claiming credit for some sort of 'victory' which was decided by the power of technology 20 years or more before they were organized.

If I had my preference, there would continue to be a Morse test as part of the entry to Amateur Radio.

But that war is lost.

It is time for me to use whatever energy is left to me to advance other important issues which have NOT yet been decided.

When I lived on Guam in the mid 60's, twenty years after VJ Day, there were still a few Japanese soldiers hiding in the caves and jungles of southern Guam, fiercely loyal to the Emperor of Japan, who did not know the war was over. They were proud but pathetic creatures, warriors in the service of a cause which had been defeated two decades earlier. Their weapons were rusted to uselessness, their uniforms a distant memory, and their country and the world had passed them by.

They were called "The Stragglers".

The war for Morse testing has been lost. Rather than become one of "The Stragglers" of this war,

a faded warrior defending the Emperor of Morse
Tests, I'm turning in my uniform and musket, and
turning my energies to other Amateur Radio issues
which need attention.

73, de Hans, K0HB

I don't know whether you are not being forthright or are just forgetful
in your old age. I did not seek any praise. I did not come up with the
circuit. I simply used what was already in place. As I recall, you
tried telling me that what I stated was untrue. State didn't replace
the last model 28 in Africa until 1991, Len.

What I say is my opinion and I have the same right to mine as you claim
for yours. I also have the right to disagree with you. Based on your
past views and some fairly recent ones, that disagreement will likely
continue.
>

Len you've come up with dozens of cutesy little names for folks who have disagreed with you or crossed swords with you. I don't have to be chef d'newsgroup to call you a fat head. That happens to be my opinion of you.

> >Political correctness is another way of dancing around what one really

Don't play patriot with me. Anyone who has served in the military or
worked for the Federal Government takes the same oath. Funny--I don't
remember that oath saying anything about, "with my life". Did you make
that up?
>
> To who (or whom) is El Jefe's allegiance owed?

You say the above to troll for another bout of Andersonian ascerbicity
to get even with another who did not please you in a newsgroup exchange.
See ya later, El Hefty Cabesa.

But that wasn't stated by me or by you, Jon. Without the qualifier, the
one-time hike is much steeper.

I don't think I made that statement, Ed. All I said was that inflation
was low. I never used the per annum term nor keyed the dues hike to the
annual rate of inflation.

But my question *is* related to ham testing. Did not our very own Kim
say that she passed the Technician exam without knowing the material?
And further that many of the hams that she knew did the same thing...

> Why would you expect me not to discuss today's tests it the
> context of tests I actually took?

Because when you equate today's tests with the tests of 40 years ago
it doesn't prove that today's tests are any good. It just says that
you think those old tests weren't any worse...

Hans, when I was active on HF back in the 60s, that was the common
expression. "The handle here is ..." was the norm. Apparently, CB
picked up on this and therefore everyone now says this is a CB term.
Oh well. I got my knuckles rapped for this once. I don't get upset
anymore. We had a guy on 440 FM ranting on about the importance of
CW. We tried to change the subject, but he wouldn't let up.

Fortunately, the repeater owner was on the repeater in the group so ... he and I switched to F-2 emission - about 40 WPM. That ended that. Whatever someone wants, now I try to accommodate them. This even included (many years ago) switching to American Morse on the air!

True. I'm sorry. There were indeed some positive things. In addition to what you mention, there is also a renewed awareness of semantics, which can be very helpful for those having an affair (I did not have sex with that women - I don't define "oral sex" as sex). Boy, that can be stretched to fit many sexual activities (which is what makes it so useful), but I'll leave that to the imagination of others. ;-)

>spectrum analyzer

I saw the two-part ARRL TIS web-reprint. Too many parts, not enough dynamic range, coupling of dispersion and sweep rate not optimum.

Analog Devices has a choice of Log-Amp-Detectors which have a bandwidth going beyond the usual MF-to-VHF analyzer needs in frequency response, but the available logarithmic range goes from 40 db to 100 db. No trimming, no fooling around with old-style discrete log-amp parts. One (thin-film?) package, under $50 in singles (Analog Devices will sell single pieces). That is the heart of a spectrum analyzer.

The very same family of Log-Amp-Detectors can be used to make a wide-range Power Meter that can measure power input over a 60 db range (log readout) with direct frequency input up to 1 GHz and a tad beyond...or a 40 db input range that will go just beyond 1.2 GHz.

A Power Meter _IS_ a valuable tool for pro HF to UHF folks. It could directly measure the output of HF to UHF Local Oscillators. With a measured directlional coupler it can also measure forward and reverse power of any transmission line carrying a transmit signal.

>A tutorial on spectrum analyzers is found at:
>
>http://www.science-workshop.com/

Joe Carr is a prolific author but those instruments are about as useful as the "DPDT Switch Wiring" alluded to by another. The Agilent website has _several_ PDF files on spectrum analyzer tutorials and applications and has made excellent spectrum analyzer instruments for more than four decades. All of those files are FREE for download.

The Agilent/Hewlett-Packard Application Note site has plenty of information for all kinds of instrumentation and measurement. Why go to the equivalent of a backyard garage workshop when one can access successful laboratories for accurate FREE information???

I have too many other activities going on to take a trip to the New England area, Ed. If we could make it a red trout dinner (dessert optional) then I know an excellent new restaurant in the unlikely place of Green River, Utah, that serves a most delicious red trout. Call it a "middle ground." :-)

The bet is on for the middle ground payoff. I say there will be some kind of major change, but not what you expect.

As a non-member of the ARRL I am not obliged to any "Director." Not to any "Board," not to any "official" of the League.

As a citizen of the USA I have elected government officials who will get my input plus organizations of the US government who make laws and regulate various things. I am not concerned with "elections" in private organizations. In fact, I won't depend on ANY private organization to "cast any ballot" of any kind for me.

>Do you believe that ARRL's concerns about the overall health and well being
>of the Amateur Radio Service are not int the best interests of its
>membership?

I would presume that the membership has already chosen which "side" they are on and simply let the League do any lobbying for them while they play with their radios. Those that are in the upper echelons of the ARRL, particularly the BoD, cannot be said to be completely altruistic as to the overall health and well being of the US ARS. They are not a government yet they put on trappings and organizational structure as if they were a pseudo-government. That's a ready-made environment for individuals who can afford to not work for a living and also experience the heady power of control over a membership of 170 thousand plus. Control is a subtle drug, Ed, once achieved it is hard to let go.

I'm not saying anyone on the BoD or in upper echelons is like that, Ed, just pointing out the what COULD happen. That DOES happen with elected government officials and private organizations do not have checks-and-balances and laws against them close to elected government officials. Why can't it happen in private organizations?

The ARRL BoD makes policy of the ARRL, Ed. That policy influences all output from the ARRL, everything from newsletters to QST to the website to legal representation and lobbying in Washington, DC. Everything. If some members did not agree at first, the inundation from ARRL material will eventually bring them around, even if in a state of ennui.

At this point you are no doubt planning a response which will place the ARRL in the best possible light. That would be "spin" but you will argue it is not. :-) Save the effort, please.

>I also think that the overall health and well being of the
>Amateur Radio Service are what is good for the ARRL.

Non-sequitur. Voting membership in the ARRL can only come from amateurs already licensed in amateur radio.

That brings up another point. The ARRL seeks to determine amateur radio licensing requirements through policy statements and lobbying in DC. It is rather obvious to those NOT members that such influence by already-licensed amateurs (in the membership) would have them set policy so as to keep requirements that the members met. That is simply human nature...and the continuation of hazing rituals. If They had to struggle with some requirements, then, by Hiram, everyone else must also struggle (to be as good as They are now).

You say they don't do such things? There's evidence all around that they do. Look at the whole morse code thing, from use to license test (never mind that some have fun with morse code, people have fun with all kinds of stuff). Those who struggled to achieve proficiency in morse code once are now older, more set in their ways, and have the time to want to continue with it. Those favor the morse code and are more inclined to favor keeping it. After a couple generations plus publishing influence favoring that, there is a de facto "standard" that morse code somehow MUST continue as the prime standard of excellence of amateur radio. Those that favor such become self-styled episcopates who continue to promote their singular skill.

It takes an enormous act of intellectual struggle to overcome a personal favored skill in order to look at the broader picture of "all amateur radio" and attempt to see what other (lesser?) people favor. Why should the episcopate care? They are now in their "senior" years and wish to enjoy what they have accomplished in their youth. They can afford to lay back and do not wish to struggle with new environments, either physical or mental.

I congratulate the BoD on achieving a modicum of success
in enough (not all) overcoming their personal desires and
realizing a future that is not how they wish it to be.

>> >The Board dealt with the international treaty now because now is when the

>
>I agree; in my personal opinion, two years ago would have been better. Would
>the Board have reached the same decision two years ago? Did it?

I cannot divine what is in the minds of the episcopate, that
group of "bishops" who would set out standards of everything
for a congregation. Everyone can only surmise their actions
based on past decisions...which has been rather constant in
certain things since the apostles first gathered in 1914.

Now how can you reasonably expect non-members and the
unlicensed to be dictated to in regards to overall amateur radio
policy? What made this episcopate divine? They did. They
struggled from a simple oligarchy to a virtual religion
complete with dogma and icons and faith (see "Amateur's
Code" number 2).

Keep in mind that not everyone was baptized into some
amateur radio faith in their teen years. Patronizing attitudes of
past BoDs "We know what is best" for amateur radio or any
other thing does not sit well with adults capable of independent
reasoning and experience. It is only accurate to say that past
BoDs "know what is best for themselves." By demonstration.

I don't know about that. I am infinitely more technical now than
I was in the 50s. How about you?

It doesn't happen over 4 years - it happens *once* at renewal time.
It is a 14.7% step function. My heartbeat has averaged 5 beats per
minute over the past 1000 years but why does that matter?

The last one I payed up was in Phoenix. I don't even want to tell you what it cost. :-)

> The bet is on for the middle ground payoff. I say there
> will be some kind of major change, but not what you
> expect.

I tend toward expecting that they will leave it alone. The biennial review is just that -- a review. They can meet the requirements and say that they think it just fine. I would guess, however, they would issue an NOI and see what changes the Service believes it needs, or that others feel are appropriate.

members.

> I was surprised the BoD even put it on the table!

I wasn't; they said that they would. :-) I think being the one sole nay vote at the R3 IARU meeting some months ago had an impact. I chatted with a friend on the Board and the reason that there was any discussion of the US requirements in the resolution was to ensure that ARRL members understood that the policy change wrt the international requirements was NOT a decision about the US requirements. At some point, the Board will have to address that, but they could do so by changing,or affirming, the present policy. My guess? Three to four years away.

> >> Yes, a meteor can fall or aliens invade the earth...

> Not to any "Board," not to any "official" of the League.

As a member of ARRL, I am not obiliged to set my personal opinion to the ARRL Board, either. ARRL members may disagree with an ARRL Director, or even run against that Director in an election and throw the bum out. :-)

> As a citizen of the USA I have elected government officials who

Nor should ARRL members. ARRL members should contact their Director to shape the policies of the ARRL, but when matters come up before the FCC that concern them, they should make their own views known to the FCC through the formal commenting process.

> I'm not saying anyone on the BoD or in upper echelons is

Whew, you had me worried about it for a minute, Len. :-)

Your mind is already made up; no sense confusing it with facts? Well, as long as you stick to what "could" happen, no harm done. :-)

If it was "rather obvious," perhaps the League could have "rather obviously" not chosen its new position wrt international code testing.

> Those who struggled to achieve proficiency in morse code once

I struggled with and achieved proficiency in Morse code, Len.

> It takes an enormous act of intellectual struggle to overcome
> a personal favored skill in order to look at the broader
> picture of "all amateur radio" and attempt to see what other
> (lesser?) people favor.

The possession or lack therof of Morse-code copying skills does not make anyone greater than or less than me. That skill is a plus, lack of it is a minus, but that can be said for any of hundreds of other skills that are important to ham radio, some more so than Morse code ability.

Getting a bit esoteric for me, Len. Can you restate that without all the
fluff and 'buzzwords?'

My point exactly. The "front page" of the web site is pretty damn good! The members are paying somebody to do that for us, and the product is first class. Stuff I'd pay to subscribe to!

And we're giving it away free -- part of >our< $5.00 dues hike will pay for it.

They make something very much like that for small boats and have had such a thing for small aircraft for decades. They basically only scream for help on an emergency frequency that is located and monitored by satellite. If there is no need to state the nature of the emergency or the needs of the emergency, then the only thing to worry about is false alarms. These things are perfect for after the ship sinks or after the plane crashes and there are no survivors to push the button (totally automatic).
